Anyone Can Grow The Improved Countess of Lonsdale (Dahlia)

This is by far the most handsome and useful Dahlia of the Cactus type introduced to date. The flowers are large and the color is intense crimson scarlet, lighting up beautifully at night. The flowers, very large, are borne on tall, stiff, erect stems and their profusion is extraordinary. Among the many Dahlia blooms shipped into the New York Wholesale Market none are more popular with the retail Florist than the Improved Countess of Lonsdale. Strong divided field-grown roots. Price six for \$1.00, \$1.75 per doz., \$12.00 per 100.

Streptocarpus Wendlandii

Streptocarpus Wendlandii introduced from South Africa in 1890, is not as familiar as its beauty deserves. Its pleasing blue flowers so freely produced from the axil of the leaf, make it one of the most desirable winter plants for the conservatory, and its odd habit of producing only a single leaf, makes it a unique and interesting specimen, with a charm all its own. Unlike the other varieties of *Streptocarpus* usually met with *S. Wendlandii* has flower-stems eighteen inches or more in height, and makes a fine flower for cutting for decorative purposes, its keeping qualities being especially commendable, as it will keep good for ten days after being cut, and will mature the undeveloped buds. These flowers follow each other in very precise succession, as the illustration shows, until four or five have started up, then it commences from behind the first flower, and sends up numerous spikes, which continue in flower for a long time, each plant lasting many weeks. Its pleasing pale blue color is very desirable, and it should become a general favorite for cut flowers.

They are easily produced from seed, the only difficulty being their tendency to damp off in the early stages of their development, but once they are pricked off they should be grown along with liberal treatment, in a temperature of about 65 deg. in a light position, shading from bright sunshine, and liberally treated from the first potting. Seed sown in January should flower about November until after Christmas if the plants are kept busy, and not allowed to rest. A house of these in bloom at the present moment is a very pleasing sight, having started to flower in December, the same spikes continuing to flower profusely and

apparently will do so for some time yet. The seed pods should be picked off as they appear.

Alfred J. Lowbess.

Echoes from England

SOME NEW PLANTS

A distinct and beautiful new freesia was shown before the Royal Horticultural Society March 7. It was raised and exhibited by C. van Tubergen, Jr. It is distinct and attracted much attention. Its parents were the well-known *Freesia refracta alba* and the rarer *Freesia Armstrongi* with pale pink or lilac-pink flowers. The new freesia is really a much improved form of *Armstrongi*; the flowers are larger and are more freely produced. Some of the stems exhibited bore as many as ten and eleven flowers; in fact ten may be said to be the average number. The prevailing color of the blooms is lilac or lilac purple, while white shows through here and there. The flower stems are long and the plant is a vigorous grower and blooms very freely. The flowers ought to prove very useful for decorative purposes. An award of merit was granted to this novelty.

Carnation Nelson Fisher also obtained an award of merit as a valuable novelty. It was exhibited by A. F. Dutton, one of the largest growers of American varieties of the carnation. The flowers are large and full, with the usual fringed edge; the color is rich cerise and very showy. The blooms are produced on good stalks and it appears in every way to be worthy of the honor bestowed upon it.

Harry H. Thomas

Oncidium crispum

Herewith is a picture of *Oncidium crispum*, the plant bearing three spikes, aggregating 149 flowers. It is growing on a piece of board with a thin layer of osmun-da fibre attached to same for rooting material. This I think makes the best kind of receptacle for this particular species. The roots can roam about at will and don't have to turn any sharp corners as they have to in baskets. Besides this the plant can be watered freely without danger of over-watering, as all water drains off quickly and, outside of the thin layer of fern root, there is nothing to hold moisture for any length of time.

During the growing season which is from February to August or September, water is given very freely; in hot weather two or three times a day is none too much, but after the pseudo-bulbs have finished once or twice a week will be sufficient. The temperature of the house in which the plant is growing ranges from 45 to 52 degrees at night in winter with 10 to 15 degrees raise in day time; in summer the house is kept as cold as the weather will permit. Plenty of air is given at all times in summer from top and bottom and in winter as much as outside conditions will warrant.

In the same house *Oncidium varicosum* and other cool growing oncidiums, besides some odontoglossums, do very well. All plants are suspended from the roof, azaleas, calceolarias, primulas and other cold-growing subjects being grown on the benches.

M. J. Oake

Do Varieties Deteriorate?

I see it stated by another of your correspondents that it is now the belief of the majority that wearing out of varieties takes place through propagating them, by budding, grafting, cuttings, layers or division of the roots. That varieties may either be deteriorated or improved by crossing one with another through the flower and seed is evident, but that this can be effected by any other method of propagation so as to permanently affect the variety I, for one, am at a loss to understand.

Working upon a weak stock, neglect, over-crowding or poor feeding will of course deteriorate an individual tree or crop and, if persisted in, all crops of the same variety will eventually succumb. But if plants or seeds which have been injured by such causes are again subjected to the genial influences of good cultivation they will regain their normal condition and the variety will maintain its identity. Grain crops suffer by the same seed being planted too long on the same land, but change them on to other soil and locality and they will improve without having lost their identity as a variety. I remember, some years ago, having received some "Banner" oats, the yield of which was enormous! The sort was planted year after year and the quality and yield failed annually until at last one change was made with a friend at a distance who was suffering in the same way, and the result was each had an excellent crop of the true old "Banner" oat; no deterioration of variety, but only of the crops planted without judgment. If a variety is superseded by a superior one, that merely casts the old one into the shade but does not deteriorate it.

That a crop, or crops of potatoes may be spoiled by planting the small tubers is now well understood, but the whole family of the variety does not suffer, but only those which have been maltreated. The Early Rose was one of the most remarkable improvements ever effected in the potato. When its merits became known, the demand for it was so great that every means was adopted to increase it. I purchased a few tubers in the fall at \$1.00 per pound. I placed them in a propagating house in gentle bottom heat, and as they sprouted I took off cuttings and rooted them; when these grew I topped them, rooting the tops, and repeating the process every opportunity, also continuing to propagate the sprouts from the original tubers. When planting time came around I planted the whole in some very carefully prepared ground and, notwithstanding the heroic treatment they had been subjected to I had an excellent crop of ordinary sized tubers. The variety was not deteriorated, nor has it suffered any deterioration in all the years since then, for it is one of the finest flavored potatoes of the present day, and is evidently by no means extinct, nor is it deteriorated by age. Burpee of Philadelphia, one of the most enterprising seed houses in the world, advertise it in their last "Farm Annual," thus "True Early Rose; the standard early potato."

The argument that there is no new life except a plant is raised from seed is fallacious; indeed it is very difficult to produce some varieties true from seed and if we did not keep up the succession by means of the various methods of propagation above alluded to we should lose our most valuable varieties. If created beings, whether animal or plant, fail from old age it may be inferred that their progeny brought to life during their state of senility may have deteriorated, but why should all their offspring fail at the same time? It is true that fruit trees will grow old and cease to be fruitful, and it is probable that scions taken from such may have

become deteriorated in consequence of the weakness of the parent, but this does not interfere with the vigor or fruitfulness of scions taken from young, healthy trees of the same variety.

As to the Lombardy poplar (*Populus fastigiata*) it must be borne in mind that it is a native of Persia and no wonder that it should deteriorate in Europe where it would miss the saline quality of the soil and the more congenial warmth of the Persian climate. Neither is it true that the Lombardy poplar has failed everywhere. Green of Rochester is advertising it, this year as one of the best trees for screen or shield when planted thickly and ornamental when planted in groups. It is preposterous to suppose that such a firm as Green's Nursery Company would advise their customers to use a tree which is in a state of natural deterioration.

The bamboo is an exotic; in Great Britain there is no native species. It was thought at one time that the American bamboo could be acclimated, and usefully grown in the southern countries of England, but the experiment failed on account of the changed conditions and not because of the degeneration of the plants owing to their having been propagated by offsets or divisions. In fact this is the only way in which bamboos propagate themselves. When they have attained their full height, they send off, horizontally, or at right angles, a series of lateral branches, and these send up, at intervals, perpendicular canes, and form the tuft of a new plant.

Now for a few samples of varieties which have not grown worse or worn out by age. Of grapes there were in England twenty-three kinds of grape vines in 1629, and the Muscatine, Frontignacs, etc., are favorite sorts at the present day, not having suffered any deterioration by the various methods of propagation by layers, eyes, etc., to which they have been subjected for centuries. The old Black Hamburg is still a standard grape which cannot be dispensed with, neither in certain qualities has it been surpassed. The Fameuse apple, although it deteriorates in localities unfavorable to it, is still the standard variety of Montreal, and is just as handsome and delicious as ever, under fair cultivation and care.

It is affirmed by some that some of the choice old English apples have died out, but if so, I have no doubt it will be found that their disappearance has been caused by bad management and not by naturally deteriorating through age.

It is perhaps unfortunate that the rage for novelty has led to the neglect of good old sorts, and their popularity may have suffered in consequence but their intrinsic quality remains notwithstanding. Plant and fruit breeders do not wait for old varieties to fail before they attempt to supplant them, but are continually experimenting with a view of excelling them, and often with success, greatly to their own advantage and to that of the public, therefore their efforts deserve recognition and encouragement, and while we have no fear for the loss by deterioration of old varieties, which can only be brought about by the action of the organs of fructification or by a long series of malpractice, we shall do well to keep up the public interest by the introduction of new varieties of equal, if not of superior, merit.

Cattleya Warscewiczii

Cattleya Warscewiczii and *gigas* were for some time considered as distinct species, but are now known, among botanists at least, as one *Warscewiczii*.

The species is variable and it is not surprising that many horticulturists who pay little attention to the parts of the flower which are not apparent to the casual observer grow the extreme types under distinct names. The differences, however, between the types are bridged over by intermediate forms. The type which was and is yet in many cases grown under the name of *gigas*, strangely enough has flowers somewhat smaller than the other extreme and has from six to ten flowers to a spike. As far as we can learn the record is ten flowers to one spike. The plant shown in the accompanying illustration has made a double lead each carrying a spike of six flowers. What was known as *Warscewiczii* has larger and more brilliant flowers and seldom more than three or four to a spike.

The species *Warscewiczii* or *gigas* is generally considered a hard subject owing to its tendency to make a second growth which is not matured before the short days and is generally smaller than the preceding one, and as it does not flower is of no value. The flowers come in June or July on the growths made in spring and early summer and, as at that time of the year it is impossible under ordinary conditions to rest the plants, the only thing to do is to keep them going and make the best of it.

It is also considered a hard subject because of a habit it has of making fine healthy looking growths which do not flower. This has, however, been traced to an insufficient amount of light and air. *Cattleyas* as a rule like plenty of both, but *Warscewiczii* should have the lightest and airiest place in the house.

Among growers who favor leaf-mould for many orchids it is the general opinion that this species will not succeed in it. The plant shown was the only one of a batch of two dozen grown in leaf soil and was the best flowered and made the strongest pseudo-bulbs of the lot.

Lengthening the rose list

The rose industry as followed by the growers for cut flowers has had to submit to more or less derision hitherto on account of the restricted number of varieties grown for market. "Beauty Bride and Maid" have been harped upon as a reproach and an evidence of narrow unprogressiveness and not without reason. The awakening seems to have come at last and he would be a rash man who would venture today to predict the number or the names of the varieties which will be included in the regular stock of the average florist three to five years hence.

Explaining the absence of the small exhibitor

The complaint frequently heard to the effect that no inducement is held out to the small grower to take part in the flower shows seem to have no foundation as applied to the American Rose Society at least. The fact is that there were scores of classes in the Boston schedule, many of them inserted for the express purpose of interesting the small growers, for which there was not a solitary entry. We would cite, for example, Division B, open only to growers having less than 40,000 feet of glass, limited to twelve cut blooms in twenty-six classes, one of which was an unlimited class as to variety shown, in which but three classes were competed for, although the prizes were certainly liberal enough. It would seem that those who are seeking an explanation of the absence of the small grower from the boards are decidedly on the wrong scent, in this instance at last.

The financial problem in the societies

How to secure a sufficiently stable financial foundation to enable a body such as the American Rose Society to plan ahead and carry to a success its legitimate activities is a problem not easy of solution, as many a well-meaning society has sadly realized. In the discussion on this subject at the Rose Society meeting last week enthusiasm in words ran high as on various occasions in the past. But it takes something more than oratory and resolves to extract the necessary hard cash and substantial subscriptions for permanent funds are much simpler as a mental proposition than a tangible reality. There can be no argument as to the desirability of a permanent fund—it is almost indispensable to the life of an organization, but the amount required to produce an adequate annual income

at three or four per cent. interest seems an insurmountable difficulty and it is not likely that many of our societies will soon see the day when persistent importunity for annual dues can be relaxed. Unselfish, hard working officials and unselfish, almost partisan loyalty on the part of every member is the winning combination in club and society life under present conditions.

The fertile florist and the pliant press

It is one of the wonders of the age—the greediness with which the daily press devour any sort of a yarn concerning the method of development or the market value of a new flower. The number of florists who have scornfully "refused" offers of from six to forty thousand dollars for new carnations and otherwise "throw bouquets at themselves" is growing apace. It is certainly a rare tribute to the presumed integrity of the average florist that the daily press, with its scepticism as regards other things, is so ready to accept without question whatever a florist may hand out.

"Suspicion sleeps

At wisdom's gate and to simplicity

Resigns her charge, while goodness thinks no ill
Where no ill seems."

But when suspicion wakes, as she is very liable to, then look out for trouble.

The green carnation

There has been more or less discussion among floral patrons and outsiders generally over the coloring of cut flowers. Of course the green carnations on St.

Patrick's Day started the talk, but it has turned to other instances of coloring by similar methods. No man has yet either by experimenting with the natural flower, or by copying in oil, successfully imitated the work of the Great Creator, nor can he hope to do so. The Almighty has reserved for Himself that power. Green carnations or any other artificially colored flowers are hideous deceptions, and certainly deserve the criticism which has been so freely bestowed on them and their despoilers on and around St. Patrick's Day. It is a business which should be stopped and the florist trade owes it to itself to take the initiative. Man is given brain power to develop flowers to their highest and best but he fails miserably when he attempts to change by artificial means the delicate coloring allotted each beautiful blossom.

Some of the surprises at Boston

The influence of cultivation in rose development was well demonstrated at the Boston exhibition. A prediction that the cup for the best vase of roses in the hall would be won by a vase of Chatenay would have seemed wild, yet that was what happened and the judgment was not questioned, although the American Beauty at its very best was in competition. Another rose that surprised everybody was Gen. MacArthur. Those big velvety petals, flowers full double to the centre, superb leathery foliage and four-foot stems, together with the unsurpassed fragrance of the variety, were an object lesson that will not be forgotten. As to Richmond, it is no exaggeration to say that the majority of those present had never seen Richmond before. They had seen plenty of flowers from Richmond plants but these had given no idea of the possibilities with this queen of American productions. Rose growing for the cut flower trade has been given a healthy stimulus by these examples of what may be accomplished through intelligent cultural methods.

WHOLESOME CHESTNUTS.

Cuttings of alternanthera having flower on them will root easily enough, but they are almost useless when rooted, because it takes a long time for them to make up their minds whether to live or die; better for them to die. Don't be in a hurry taking cuttings from alternanthera recently rooted; better wait and get better cuttings, and do less injury to the plants.

Marguerite carnations are very useful if they are got early, but if not, they are not worth bothering with, because if the plants are small and late in being planted, it will be near fall before they begin to flower; so set them a-going. The several varieties of Begonia Vernon are just right for neat fancy bedding, but there is one especially, a double red variety, which is certainly stunning for effective decoration. I don't know the name of it, but I believe the stock is now owned by R. & J. Farquhar & Co.

Geraniums that have, when potted, been placed close together should now, if possible, be given a little more breathing space, otherwise they will grow up weak and spindly. Keep the buds and flowers cut off all not soon required, or to be offered in the near future for sale, and pinch the tops off any that appear to be lanky. Pansies in frames should have air admitted whenever possible, but for some time yet close up early in the day. Where they are growing closely together, thin them out, and either plant them in another frame or in boxes filled with good, rich soil and set in a cold frame. A good stock supply of coleus can yet be obtained from cuttings, but do not delay operations very much longer.

Get everything possible into frames. I mean all hardy stuff for early planting, such as perennials, so that when suitable weather shows up the stuff will be in condition for planting. Look over your cannas and get ready all you think will be required for an early start. Divide the tubers that are sound and start them in a gentle heat on a bench, covering them with leaf-mould or put them in flats, covering them lightly with the same material. Remove everything that you are positive is dead. The tubers place in heat the same as the others, and when they begin to grow you will then be able to divide them to better advantage. It is much too early yet to start clumps of the common cannas into growth.

THE AMERICAN CARNATION SOCIETY.

The president-elect (John H. Dunlop of Toronto, Ont.) has so enthused the inhabitants and officials of his city that every obstacle that might prove an inconvenience to the members and exhibitors who will attend the meeting next January in Toronto, Canada, has been removed and there will be less trouble in getting stock to this show than in the larger cities of the U. S.

Anything now that bears the stamp of this society goes through without any delay, and it is a safe prediction to say that when it comes to the week of the meeting stock will be rushed through from Suspension Bridge to the exhibition hall with a dispatch and care that will make the people on this side want all of our meetings held in Toronto.

A. M. HERR.

PHILADELPHIA SPRING SHOW.

The spring show of the Pennsylvania Horticultural Society had more fine specimen plants on exhibition than have been seen at any previous show at this season of the year. The prominent features were the azaleas. The best plants had apparently been timed to a day; every flower was perfect with a few more to open and not a flower dropped. One of the very best was "Alice," a magnificent specimen, over five feet in diameter. It is one of those parti-colored varieties, some branches having flowers light red, others pink and red, while yet others were pink and white. Taking it altogether this was the most effective flowering plant in the show. It was exhibited by Samuel Batchelor, gardener for Clement Newbold. Other azaleas from the same exhibitor were Rosa Mundi, a trifle less than 5 feet in diameter, red in color, and Francois de Vos, cherry red. There were other fine specimen azaleas on exhibition, notably those from the greenhouses of James W. Paul, Jr., the president of the society, James Hurley, gardener. Mr. Newbold's gardener also had two fine palms, *Caryota urens*. Begonia Feastii from the same exhibitor was much admired.

First premium was awarded to the same exhibitor for six geraniums; these were exceptionally well-grown and flowered to the day. There was some controversy about two of the varieties being too nearly alike, but there were evidences of distinctiveness even if they were slight, and all the plants in this collection were so uniform in contour that they commanded the admiration of casual observers and experts alike. *Cineraria stellata*—what a magnificent flowering plant this is when space can be given to develop it to its fullest capacity; and there were some exceptionally fine plants here on this occasion. A *Rhapis flabelliformis* twelve feet high and well-proportioned was another feature that came from the greenhouses of President Paul.

The hyacinths and tulips exhibited in 12-inch pans were never better. A beautiful variety of tulip—Pink Beauty—was exceptionally fine. Wm. Kleinheinz, gardener for P. A. B. Widener, as usual took many prizes.

Bougainvilleas were in evidence. Wm. Robertson had a fine plant of the *Sanderii* variety, and W. K. Harris with his variegated form of same is confident that it will prove a valuable addition to ornamental plants. The red-flowered form exhibited by Samuel Batchelor was freely commented upon as hardly bright enough.

Primula obconica was another of the prominent features and the collection having a white form and the several varying delicate shades was awarded first premium. This went to Mrs. S. T. Bodines, A. G. Williams, gardener. A large plant of *Begonia Herachefolia*, full of flowers and in a 10-inch pot, was much admired.

Time is too short to give all the good points of the show which will go down into history as one of the very best for high finish and general excellence.

EDWIN LONSDALE.

The Kentucky Society of Florists will hold its regular monthly meeting at Jacob Schulz's store, 644 Fourth avenue, Louisville, Tuesday, April 3 at 8 P. M.

FLORISTS' CLUB OF PHILADELPHIA.

Thursday the 22nd inst. was Ladies' Night—an annual and time-honored event in the annals of the Florists' Club of Philadelphia. It proved a most successful affair in every way and reflected credit on the house committee and officers of the club who had the matter in charge. The fascinating games of shuffleboard, pool, billiards, and bowling were indulged in by the wives and sweethearts of the members—giving the ladies a taste of the powerful influences that keep their masculine friends so often late in their homecoming. The intervals were enlivened by song and story and the refreshment end of the programme was ably looked after. A pleasing feature of the occasion was the number of new faces observable in the audience.

TOLEDO FLORISTS' CLUB.

The meeting last Wednesday was poorly attended, owing to the terrible snowstorm; most of the members stayed at home attending to firing. Emil Savoy was a visitor. The meeting was a short one. There were two nice exhibits, one from Krueger Bros., who showed a bunch each of *Enchantress* and Mrs. T. W. Lawson carnations and a vase of Meteor roses. W. E. Hall exhibited his carnation seedling, E. G. Gillett. The parents of this magnificent carnation are *Prosperity* and *Maceo*; the color is a fine scarlet, showing now and then the slightest streak of white. It is as good a scarlet carnation as is now in the market.

DETROIT FLORISTS' CLUB.

At the regular meeting, March 21st, an essay on steam heating was read by A. Simonds of Grand Rapids, which was found very interesting. Hugo Schroeter also read an essay on seasonal preparations for Easter which contained some useful information. The Detroit Florists' club then decided to hold a Flower Show on April 4th at the Michigan Cut Flower Exchange. As new varieties are to be featured many growers will no doubt contribute.

OBITUARY.

Gustave A. Fleck, of Oakland, Cal., one of the oldest florists in the city, ended his life on March 15 at his home. He was a native of Germany, 70 years old.

Charles Beck, who for thirty-five years has been florist and landscape gardener at the Soldiers' Home, Dayton, O., passed away on March 20 after an illness of many weeks. Mr. Beck was born on Jan. 2, 1827, at Schwarzenfels, Germany, and came to America in 1847. He has resided in Dayton since 1861. He was considered one of the finest landscape gardeners in this country. He was a member of the Society of American Florists and Ornamental Horticulturists for several years, but resigned in 1902. He leaves a wife, two daughters and a son, Otto Walter Beck, a teacher in the Pratt Institute, Brooklyn.

AMERICAN ROSE SOCIETY

Meeting and Exhibition at Boston an Unprecedented Success.

Spring Show of Massachusetts Horticultural Society a Scene of Splendor.

Largest Attendance on Record.

Officers Elected.

PRESIDENT—Robert Simpson, Clifton, N. J.; **VICE-PRESIDENT**—F. R. Pierson, Tarrytown, N. J.; **TREASURER**—Harry O. May, Summit, N. J.; **SECRETARY**—Benj. Hammond, Fishkill-on-Hudson, N. Y.

EXECUTIVE COMMITTEE—W. A. Manda, So. Orange, N. J. (1 year); J. J. Curran, Elmira, N. Y. (3 years); Peter Bisset, Washington, D. C. (3 years).

The combined exhibitions of the Massachusetts Horticultural Society and the American Rose Society made a flower show acknowledged by all visitors to be superior to any ever put up on this continent. The rose show in itself was never equalled at this season of the year in this or any other country, either in quality or extent. Its size was a surprise even to those who have worked indefatigably to this end, and the lecture hall, which it had been feared might prove too large, was overcrowded when the entries had all been staged. Much more room could have been used to great advantage, and could have been secured had the exhibitors given any advance notice of their intentions. Although urged to do so, many waited until they arrived with their exhibits before making any entry. If the rose society were to stay one more year at Boston they could probably use the entire Horticultural building advantageously.

The surprise of the rose show was the American Beauty, Chatenay, MacArthur and Richmond exhibits. If the latter should keep on developing its possibilities as it has during the past year, the American Beauty will have to face a very dangerous rival. There were eight entries in the class for fifty Beauties for the executive committee prizes, and four of fifty each for the MacMulkin cup, and the judges only made their decision on the former after they had called in assistance and added a New York and a Boston retail florist. There were six entries in the class for twenty-five American Beauties, and thus, with the addition of the smaller classes, it will be seen that there were nearly one thousand Beauties alone.

Among the competitors were Farenwald, Bartram, Burton, Heacock and Floral Exchange from Pennsylvania; Briarcliff from New York; Brant from

ROBERT SIMPSON.
President-elect American Rose Society.

New Jersey; Marshall from Rhode Island; Elliott and Waban Rose Conservatories from Massachusetts. As will be seen in the award list appended, the Pennsylvanians gathered in about everything in the Beauty prizes in the show; they constituted an exhibition in themselves. On Bride and Bridesmaids in the different classes there were no less than forty entries, every bloom a special. The competition in the silver cup and other special prize classes was much greater than in the regular cash classes. Of thirty-three specials, twenty-eight were competed for, there being six and seven entries in several cases.

For the first time in many years the retail florists were given an opportunity to show their handiwork in mantel and table decoration. Houghton & Clark won the cup in both instances. Their mantel decoration was of Wellesley roses, Farleyense and Pieroni ferns. Their table was adorned with Killarney roses in center-piece and corsages. Other mantels were done in Bridesmaids and smilax by The Rosary, Richmond and Crimson Rambler by MacMulkin, Richmond, Safrano and Asparagus Sprengeri by Hoffman, Liberty and Bridesmaid by Penn.

Among the new things in cut bloom were John Cook's Enchanter, shown by Robert Simpson; Queen Beatrice, shown by F. H. Kramer; Tom Field, shown by George Field; and Miss Kate Moulton, shown by the Minneapolis Floral Company. The latter was the only exhibit from west of Utica, N. Y. We hope this solitary evidence of enterprise on the part of our western friends may receive adequate reward, and have no doubt it will, as the charmer from far off Minnesota showed up well and demonstrated keeping qualities such as few roses are possessed of.

The pot roses shown for the \$100 cup were very fine. The winning group from Thomas Roland, Nahant, occupied the stage and added very much to the general appearance of the hall. The competing group from H. C. Steinhoff, West Hoboken, N. J., was also superb and, considering the long distance they came, the blooms were in remarkably fine condition. There being no second prizes in the special premium classes, the following named exhibitors in this department not winners, should be mentioned: Francis Skinner, Benj. Dorrance, John Marshall, Brant Bros., Elwood Brant, John H. Taylor, Floral Exchange, Robert Montgomery, J. N. May, C. H. Totty, Joseph Heacock, Briarcliff Greenhouses. These competing exhibits were all exceptionally fine. Following is the list of awards:

List of Awards for Roses.

Division A, Twenty-five Blooms:—(1) American Beauty—First, George Burton; second, Briar Cliff Greenhouse. (2) Queen of Edgely—First, The Floral Exchange, Edgely, Pa. (3) Bride—First, Waban Rose Conservatories; second, W. H. Elliott. (4) Bridesmaid—First, Waban Rose Conservatories; second, W. H. Elliott. (5) Mrs. Pierpont Morgan—First, Waban Rose Conservatories; second, R. T. McGorum. (6) Souv. du President Carnot—First, R. T. McGorum; second, John McFarland. (7) Golden Gate—First, R. Simpson; second, Floral Exchange. (8) Mme. Abel Chateau—First, R. Simpson; second, Floral Exchange. (9) Mrs. Oliver Ames—First, W. H. Elliott; second, Robert Montgomery. (10) Ivory—First, Floral Exchange. (11) Safrano—First, W. H. Elliott. (12) Liberty—First, W. H. Elliott; second,

ROSE QUEEN BEATRICE.
Exhibited by F. H. Kramer.

John H. Taylor (20) Wellesley First, Waban Rose Conservatories; second, W. H. Elliott. (21) Killarney First, W. H. Elliott. (22) Richmond First, W. H. Elliott. (23) Gen. MacArthur—First, Robert Miller; second, John N. May. (24) Uncle John First, R. Simpson (25) Enchanter R. Simpson.

Division B, Twelve Blooms: (29) Bride First, Montrose Greenhouse; second, Robert Montgomery. (30) Bridesmaid First, Montrose Greenhouse; second, Robert Montgomery. (32) Mrs. Pierpont Morgan Second, Robert McGorum.

Division C, Twelve Cut Blooms: (53) Twelve Blooms American Beauty First, John Marshall. (55) Twelve Blooms Bride First, John Marshall; second, D. C. G. Weld. (56) Twelve Blooms Bridesmaid First, D. C. G. Weld.

Division D, Twelve Cut Blooms: (59) Twelve Blooms Ulrich Brunner John McFarland. (80) Twelve Blooms Mrs. John Laing Second, John McFarland.

Division E, Twelve Cut Blooms: (117) Twelve Blooms Ulrich Brunner Second, D. F. Roy. (118) Twelve Blooms Mrs. John Laing Second, D. F. Roy. (119) Twelve Blooms Gabriel Luizet Second, D. F. Roy.

Division F, Special Prizes for Cut Blooms: (155) Fifty Blooms American Beauty, the Executive Committee's Prize, winning the Lord & Burnham Trophy—First, Geo. Burton; second, J. H. Bartram. (156) Fifty Blooms of Wellesley, winning

Galvin Cup—First, Waban Rose Conservatories. (157) Fifty Blooms of American Beauty, winning MacMulkin Cup—First, A. Farenwald. (158) Fifty Blooms of Liberty, winning Elliott Cup—A. Farenwald. (159) Fifty Blooms of Bridesmaid, winning J. Newman & Sons Cup—Waban Rose Conservatories. (160) Fifty Blooms of Richmond, winning 825 First, Waban Rose Conservatories. (161) Twenty-five Blooms of Richmond R. Simpson. (162) Twelve Blooms of Richmond W. G. Badgley. (163) Twenty-five Blooms of Wellesley Second, W. H. Elliott. (164) Twenty-five Blooms of Killarney, winning Doyle Cup—Waban Rose Conservatories. (165) Twenty-five Blooms of Bride, winning Zinn Cup—W. H. Elliott. (166) Fifty Blooms of Chateau, winning Kasting Cup—Exeter Rose Conservatories. (168) Twenty-five Blooms of Liberty, winning Penn Cup—A. Farenwald. (171) Twenty-five Blooms each, of Bride and Bridesmaid First, Geo. C. Harbeson. (172) Twelve Blooms Bridesmaid, winning R. & J. Farquhar & Co. Cup—W. C. Rust. (174) Sweepstakes, Best Vase of Roses in the Exhibition, winning Welch Bros. Cup—Exeter Rose Conservatories.

Division G: (176) General Display of Roses, winning Silver Cup—T. Roland. (177) Six Plants any One Variety—First, W. W. Edgar; second, Herman C. Steinhoff. (178) Specimen Plant First, W. W. Edgar; second, Herman C. Steinhoff. (179) Specimen Climber—First, M. H. Walsh;

second, Francis Skinner, Jr. (180) Crimson Rambler Herman C. Steinhoff.
 Division II, Special Prizes for Pot Plants:—(182) Specimen Plant, winning A. H. Hews Co. Cup—Col. Charles Pfaff. (184) Specimen Plants of Lady Gay and Wedding Bells—T. Roland. (187) Best Mantel and Mirror Decoration, winning A. F. Estabrook Cup Houghton & Clark. (188) Best Dinner Table Decoration of Roses, winning Houghton & Dutton Cup Houghton & Clark.

The exhibits of the Massachusetts Horticultural Society occupied the main hall and the small hall adjoining. It was a remarkable display of the expert gardener's art. The commercial growers were better represented than heretofore. R. & J. Farquhar & Co. placed an immense group of spring flowering material, superbly arranged; W. W. Rawson filled the centre of the big vestibule with a striking oval bed of tulips Ophir d'Or, bordered with a wide margin of dark leaved shamrock; Thomas Roland surprised every one with a sensational group of Easter flowering plants, novelties among which were splendid specimens of Canterbury Bells and Japan lilies; he also showed a group of *Mahernia odorata*, an old favorite so long neglected as to be practically a novelty now. Edward MacMulkin also had a showy group. F. R. Pierson Company had a fine display of the Tarrytown fern and carnation Winsor. H. H. Barrows & Son had a glorious group of *Nephrolepis Whitmanii*. Another novelty was *Adiantum Edgari*, shown by W. W. Edgar. The best description of it is to say that it looks well able to give *Crowianum* a hard struggle to maintain its pre-eminence. The carnation growers were well represented by about fifty large vases, in which all the prominent varieties of the present time were shown in perfection. Julius Roehrs Company showed a very interesting collection of novelties in decorative store and greenhouse plants, including many new and rare things, also orchids. Lager & Hurrell staged a great group of orchids, among them being a plant in flower of *Cattleya Schroederæ*. From John T. Gale and Malcolm Orr came sweet peas of highest quality, and James Anderson showed a fine vase of stock Beauty of Nice.

From the Bussey Institution and many private gardeners came a bewildering array of bulbous stock, lilies, genestas, rhododendrons, azaleas, viburnums, laburnums, trilliums, kalmias, andromedas, etc., and an elegant group of acacias, ericaceous material and other hardwooded plants. Among the sensational exhibits were M. H. Walsh's magnificent group of rambler roses—plants up to eight or ten feet high, and five to six feet through, loaded with bloom; the cyclamens from George F. Fabyan, Dr. C. G. Weld and E. J. Mitton's conservatories—plants such as can be seen nowhere in the world outside of Boston; the gorgeous amaryllises from George F. Fabyan; orchids from J. E. Rothwell and others. The cinerarias, primroses and polyanthus were also shown in great perfection and profusion. Awards were made as follows:

Awards by Massachusetts Horticultural Society.

Silver Gilt Medals.—H. H. Barrows; *Nephrolepis Whitmanii*. Silver Medals.—Mrs. R. B. T. Den-drobium superbum Delect. L. C. Coet, *Cattleya Thayeri* supra.

Ironze Medals.—Thomas Roland; Superior cultivation of *Mahernia odorata*.

First-class Certificates of Merit.—M. H. Wassa, Seedling Rambler, Delight; F. R. Pierson Co., Specimen Azalea, Carnation Winsor; Lager & Hurrell, *Cattleya Schroederæ*; Ant. C. Zvolanek, Seedling winter flowering Sweet Peas.

Honorable Mention.—Peter Fisher, Carnation Beacon; Mrs. J. Montgomery Sears, Seedling Amaryllis; Peter Fisher, Carnation Seedling No. 500; James Crawshaw, New Asparagus; Pierce Bros., Seedling Carnation, Gov. Guild; W. W. Edgar, *Adiantum Edgari*.

Indian azaleas, first, Edward MacMulkin; second, Mrs. John L. Gardner; third, E. W. Breed.

Palms, pair, first, William Whitman; second, George F. Fabyan; third, Mrs. J. L. Gardner. Ericas, first, Edward MacMulkin; second, Dr. C. G. Weld. Orchids, first, George F. Fabyan; second, J. E. Rothwell; third, Edmund W. Converse. Hard-wooded greenhouse plants, first, Dr. C. G. Weld; second, Mrs. J. L. Gardner. Acacia, first, Mrs. Frederick Ayer; second, Dr. C. G. Weld; third, Mrs. Frederick Ayer. Climbing rose, specimen plant, in bloom, first, second and third, M. H. Walsh. Collection of rambler and other roses, suitable for landscape and decorative purposes grown in pots, first, second and third, M. H. Walsh. Hardy primroses and polyanthus, 1st, William Whitman; 2d, ditto; 3d, Mrs. J. L. Gardner. Cyclamens, 10 plants, 1st, George F. Fabyan; 2d, E. J. Mitton; 3d, George F. Fabyan. Ten plants in not over seven-inch pots, 1st, George F. Fabyan; 2d, Dr. C. G. Weld; 3d, E. J. Mitton. Single plant, 1st, Dr. C. G. Weld; 2d, E. W. Converse. Cinerarias, six varieties, 1st, George F. Fabyan; 2d, E. J. Mitton; 3d, Mrs. J. L. Gardner. Specimen plant, 1st, Dr. C. G. Weld; 2d, Mrs. J. L. Gardner. Cineraria stellata, six plants, 1st, William Whitman; 2d, Mrs. J. L. Gardner. Specimen plant, 1st, William Whitman; 2d, Mrs. J. L. Gardner; 3d, William Whitman. Hyacinths, twelve, one in each pot, 1st, William Whitman; 2d, Mrs. J. L. Gardner; 3d, Bussey Institution. Six, 1st, William Whitman; 2d, William Whitman; 3d, Mrs. J. L. Gardner. Three pans, 10 bulbs of one variety in each, 1st, William Whitman; 2d, George F. Fabyan; 3d, Mrs. J. L. Gardner. Single pan, 1st, William Whitman; 2d, William Whitman; 3d, Mrs. J. L. Gardner; 4th, Mrs. J. L. Gardner. Tulips, six pans, nine bulbs of one variety in each, 1st, William Whitman; 2d, Mrs. J. L. Gardner; 3d, Bussey Institution. Three pans, 1st, Dr. C. G. Weld; 2d, William Whitman; 3d, William Whitman. Three pans, 12 bulbs of one variety in each, 1st, William Whitman; 2d, William Whitman; 3d, Bussey Institution. Polyanthus narcissus, four pots, five bulbs in each, 1st, Mrs. J. L. Gardner. Jonquils, six pots, 1st, William Whitman; 2d, Mrs. J. L. Gardner; 3d, Bussey Institution. Narcissuses, six pots, single or double, 1st, William Whitman; 2d, Bussey Institution; 3d, Mrs. J. L. Gardner. Three pots, 1st, William Whitman; second, William Whitman; 3d, Mrs. J. L. Gardner. Lily of the valley, six pots, 1st, William Whitman; 2d, Lowthorpe school of horticulture. Roman hyacinths, six pans, 1st, William Whitman; second, Bussey Institution. Amaryllises, six pots, 1st, George F. Fabyan. Collection of herbaceous spiraeas, first, William Whitman. Display of Easter plants, 1st, Thomas Roland. General display of spring bulbous plants, 1st, William Whitman; 2d, Bussey Institution. Hybrid perpetual roses, 12 blooms, 1st, Col. Charles Pfaff; 2d, Mrs. C. C. Converse and Mrs. Lester Leland. Twelve blooms of Orich Brunner, 2d prize to J. McFarland. Twelve American Beauty, 2d prize to W. H. Elliott. Twenty-five Bride, 1st, William H. Elliott. Bridesmaid, 1st, William H. Elliott. Liberty, 1st, William H. Elliott. Any other variety, 1st, William H. Elliott. Killarney, 2d, R. T. McGorum. Souvenir du President Carnot, 3d, J. McFarland. Souvenir du President Carnot Carnations, 25 crimson, 1st, M. A. Patten; 2d, S. J. Goddard; 3d, Backer & Co. Dark pink, 1st, Thomas F. Mathews; 2d, Elijah A. Wood; 3d, H. A. Stevens company. Light pink, 1st, William Nicholson; 2d, George E. Buxton; 3d, M. A. Patten. Scarlet, 1st, H. A. Stevens company; 2d, S. J. Goddard; 3d, William Nicholson. Yellow variegated, 1st, Backer & Co.; 2d, Backer & Co. White variegated, 1st, M. A. Patten; 2d, F. R. Pierson company; 3d, William Nicholson. Pansies, 48 blooms, 1st, Mrs. E. M. Gill. Violets, Lady Hume Campbell, first, Malcolm Orr; 2d, E. Brigham; 3d, H. F. Calder. Any other double variety, 1st, H. F. Woods; Swanley White; 2d, H. F. Woods. Marie Louise; third, Norris F. Comley, Swanley White. Princess of Wales, 1st, William Sim; 2d, Norris F. Comley; 3d, E. Brigham. Any other single variety, 1st, W.

William Sim, Gov. Herrick; 2d, Mrs. Fred Ayer, California; 3d, H. F. Woods, California. Orchids, J. E. Rothwell, the Appleton silver gilt medal.

In a space generously set apart for trade exhibitors were interesting displays of their specialties by Robinson & Co., florists' supplies and greens; Holly-Castle Co., electric circulator; Kroeschell Bros., boilers, wrenches, etc.; E. H. & E. J. Gove, adjustable carnation support; D. Iliffe, greenhouse piping and fittings.

On Saturday evening and on Sunday afternoon and evening the Brookline Band of 25 pieces gave a musical concert in the main hall. On Saturday forenoon the children from the Little Wanderers' Home were admitted and escorted through the show. Grouped in the centre of the hall, they sang a couple of songs listened to with delight, mingled with not a few tears by a vast throng of people. The incident was commented upon as one of the most impressive connected with the exhibition. The roses left at the close were in remarkably good condition, and were sent by the American Rose Society to the Children's Hospital.

ANNUAL MEETING.

The annual meeting of the American Rose Society was called to order in the committee room, Horticultural Hall, Boston, on Friday, March 23, at 8 p. m., by President Alexander Montgomery, with about sixty members in attendance.

President's Address.

The president read his address as follows:

Ladies and gentlemen and members of the American Rose Society, for the second time I have the honor to report to you on the progress made by this Society. During the year the commendable encouragement which we have received from all over the country is evidence that the rose men are gradually becoming interested in our work. This interest is in a large measure due to the excellent work of our secretary, and also to the introduction of several new roses that give good promise of being valuable additions to our list of winter flowers. This branch of our business is worthy of all the encouragement our members can give it, as the future success of our Society depends to a great extent upon the interest created by their introduction. While we cannot expect to have a Richmond every year, yet there is evidence of other valuable varieties in sight that will help to whet the curiosity and consequently the interest of our rose growers. We cannot hope to compete with the carnation men in this respect, as they are fortunate in having a flower that responds readily to their efforts toward improvement, while with the rose, even the most expert hybridizer finds it slow work to get anything that is an improvement. However, when one is offered for sale, both large and small growers should buy it and test it for themselves, if you don't succeed at first don't be in too great a hurry to condemn, but remember the Liberty and how few had good success with it at first, yet it became one of our most valuable varieties.

The rose of the future will un-

doubtedly be raised from a mixture of the tea and the hybrid blood, for in no other way can we expect to get the bright colors that are so much wanted. We may not be able to grow the future roses in the haphazard way that the true teas have been grown in the past, but by careful study of their requirements our progressive rose men will have little difficulty in adapting themselves to the best methods of growing them. From what I have been able to learn from some of those who are devoting their best energies to the raising of new roses, the first great principle they have in mind is that a rose, to be of value, must have a strong constitution and be a vigorous grower, otherwise it will be of little use to the American rose grower. A fine individual flower without these qualities cannot satisfy. Many plants found in every batch of seedlings have ideal flowers but are so wanting in vigor of growth that they have to be discarded. It takes considerable courage to do this, yet the honesty of purpose of our seedling rose raisers can be depended upon to do it, as only by these heroic methods can the business prosper and the best interests of our Society be conserved.

I am not the least pessimistic as regards the future of the rose business, for the rose will hold her proud place in the commercial world as well as in the world beautiful. The growth of the rose business in the past twenty-five years has been phenomenal; its growth in the future, I doubt not, will be equally great; therefore I say to the young men starting in, put forth your whole energy to acquire the best methods of cultivating the Queen of flowers that you may produce her in the highest state of perfection. Don't be afraid to exhibit at our shows and in this way induce a healthy rivalry; don't be afraid of being beaten, you cannot always win. Try again and if you are made of the right material for an exhibitor you will be surprised to find how one or two failures will stimulate to increased effort to win the coveted blue ribbon of our Society.

It should be the duty of the American Rose Society to encourage the amateur rose grower in every possible way by distributing proper literature, giving directions how to plant, and also what to plant, yet our greatest effort should be put forth to enroll the commercial cut flower and plant men. We should not rest until we have every rose grower in the country on our membership list. The amateurs' interests are only local, they will not follow our exhibitions from place to place, consequently, when the exhibition goes away, as it must if it is to be a permanent success, they lose interest and drop off our list. Let us make our Society of interest to the professional by making it profitable and distance will not deter him from being there. We may just as well look this question squarely in the face if we aim to be a permanent Society, for sentiment doesn't count in the commercial world. The carnation man attends his convention that he may exhibit or see the new varieties, or so he can sell or buy stock, not for the love of the flower altogether does he go. The rose man is no different from his brother the carnation man, there must be some profitable attraction to bring him out; therefore it is the duty of every rose

BENJAMIN HAMMOND.
Secretary-elect American Rose Society.

grower to make an exhibit of his wares at our exhibition—if he has something new so much the better—but the small grower, as well as the large, ought to do his part.

Let our Society go to all parts of the country. They say a rolling stone gathers no moss, but I believe a rolling National Rose Society would gather members and corresponding strength.

In conclusion I wish to thank the members of the American Rose Society for the honor done me by twice electing me to be your president and while I have fallen far short of what I wanted to accomplish for the Society, yet I have done the best I could under the circumstances. Although I now step out of office, the Society will still have my hearty cooperation and best wishes for its success.

Secretary's Report.

The following report was read by Secretary Wm. J. Stewart:

With another year of experience to our credit, we come again as guests of our good friends of the Massachusetts Horticultural Society, to set up one more milestone in the history of the rose in America and the organization devoted to its advancement. How have we fared during the year since we

last met in this room? The best answer I can give is to ask you to look at the splendid exhibition in the adjoining hall. Your secretary can give you facts and figures of the year's doings but you who are privileged to see this exhibition will care more for the kind of evidence here given, that the rose growers are wide awake, that the American Rose Society is backed by workers both willing and capable and has now gotten safely beyond the point where any doubt could exist as to its permanency and usefulness.

For the first time since the organization of this society an annual report and bulletin has been published. In it are recorded the proceedings at the meeting in Boston one year ago and the doings of the executive committee in the meantime including the delightful visit to the rose garden at Hartford, Conn., last June. Several well-prepared and instructive papers generously written by members for this purpose are included, together with a list of the members up to date. A few advertisements were inserted which materially reduced the cost of issuing the report. A copy was duly mailed to all members and further reference to it now is unnecessary except that your secretary has to acknowledge the unfortunate omission of a number

names that should have appeared in the published list of members, his own name being one of the unfortunate ones. The others were Miss C. Cruger, J. D. Eisele, A. Gude, W. F. Gude and Mrs. G. M. Reynolds.

The number of members who have paid annual dues during the fiscal year ending June 30, 1905, or later, is 112; the number of life members 42; making the total membership March 20, 1906, 154. Of this number 22 are new members added since March 21, 1905. Resignations received since that date have been 14.

As I have said the problem of the existence and prosperity of the American Rose Society seems now to have been solved. Under its standard are gathered not only the commercial cut flower growers with their marvellous enterprise and giant influence but specialists in roses for the garden, the park and the dwelling house. The hybridist and fancier, no matter what direction his enthusiasm may take, is coming to be a believer in and a supporter of the rose society. Your secretary is of the opinion that our best success lies in holding the affairs of the organization under professional management for the present at least, it being clearly the duty of the practical rosarian to first establish the organization on a sound foundation and then, by such educational means as are possible, to widen the circle of the Society's scope and popularity. No better beginning can be made than the assembling of an exhibition, alike creditable in extent and quality, such as we have in evidence on this occasion. Under existing circumstances our strongest appeal to the people lies in the exhibition feature. Other work will follow in course. Hybridization, cultural experimenting and investigation must be encouraged and results carefully tabulated and given widespread publicity. All this means work unremitting, methodical and self-sacrificing, but if it is undertaken in the right spirit we shall have something to show for it all a year or two hence.

It is a knowledge of this urgent necessity which prompts me to ask that you now place the office of secretary in the hands of some one who can give it much more time than I am able to devote to it. I have realized all along, since assuming the duties of secretary, that the time and effort I have been able to spend in the work have been most inadequate to the pressing needs of the society. Some one should be secured who can keep up a vigorous campaign all through the year and build up the membership so that the annual dues may be sufficient to pay running expenses. Our field is a wide one and its possibilities far from being disclosed as yet.

Treasurer's Report.

Harry O. May, treasurer, presented his report, showing:

A cash balance of \$282.20 in addition to the permanent fund. This was reduced from the amount reported one year ago by several payments on account of previous years, but at the end of the fiscal year, June 30, it is hoped to have the deficiency fully made up by collection of life dues.

The treasurer supplemented his report with an urgent appeal for more

active financial support for the society, calling attention to the small amount of funds on hand. He was followed by John H. Taylor in advocacy of a permanent fund to be raised by subscriptions from those who are financially interested in the rose, Mr. Taylor offering to start the list with a substantial sum. This brought up an animated debate, participated in by Messrs. Robert Simpson, Farenwald, Dorrance, Reed, Elliott, Barry, Wheeler and others, in which much oratorical ability was displayed. Some took the ground that the amateur should be followed up and his active support secured, others that the professional people who are making money out of the rose should take hold first. A permanent fund large enough to yield a substantial income was looked upon by some speakers as the most desirable feature, while others believed that a large annual membership would be preferable. All agreed that the effect of the magnificent exhibition given by the society on this occasion would do

P. J. LYNCH.

much to give the society the needed enthusiasm.

P. J. Lynch of West Grove, Pa., then read a paper on the mail order trade.

The Mail Order Trade.

By P. J. Lynch.

In considering the scope to which I should confine the subject I have taken it for granted that to keep within the propaganda of this Society I must speak with special reference to the rose as a mail order commodity, yet the subject, The Mail Order Trade (in plants), has been touched upon so little by any of our National Societies, I shall therefore treat it somewhat broadly.

We have no governmental statistics to give an idea of the magnitude of the present mail order trade in plants. I doubt if very many of us realize the great work being done in this branch of our industry, a work whose power to advance the material growth and welfare of floriculture has been and is perhaps the greatest factor in our present unparalleled prosperity. Your mail order man is the pioneer

and pathfinder of the craft that has carried to the remote parts of the country the gospel of loving flowers, especially roses, and how to get and grow them. He has been, in a measure, the educator of the masses, many of whom are not in close touch with the large centers of population where the rose as grown for cut flowers can make its own appeal. He has been a factor in beautifying the waste places of our land, and it is my thought that the great work in which we are engaged has but commenced. Each year this great Government of ours continues to improve the efficiency of the mail service, so that to-day there is not a post office in any part of the Union where rose plants cannot be delivered with entire safety.

When the time shall come that corporate greed will not stand in the way of the needs of the people we shall have a parcels post system that will mean more to the business interests of the country than any contemplated legislation that I know of at this time. No measure that we can endorse will so advance the mutual interests of both buyer and seller as the enactment of a parcels post system similar to that in vogue in Great Britain, and no measure we can oppose, if I am not digressing from the subject, is more detrimental to the interests of the mail order trade than this absurd free distribution of seeds by the United States Government.

The mail order man is not a youngster. He has been around quite a long while. In 1869 the firm with which I am connected published an advertisement in the New York Tribune offering to send to any post office in the United States fresh, live, growing plants, on their own roots, and guaranteed the safe arrival. This proposition evidently was taken as a good joke, for we got no orders from it. Since those days marvelous advances have been made. Throughout the land there are to my direct knowledge one hundred and five mail order establishments, comprising millions of feet of glass, devoted exclusively to sending plants—roses principally—by mail. For catalogues and advertising alone I estimate that there is spent annually one and one-half million dollars. Some of these catalogues are gems of printers' art, and as a rule they are sent free to customers and to all others who ask for them. Through liberal advertising in the National weekly and monthly publications the public is kept advised that your mail order man is ready with the goods. It has been said, but I believe facetiously, that our descriptions of the wares we have to offer are occasionally too seductive, but I am sure, nevertheless, that the sincerity of purpose cannot be questioned. To be successful we must be enthusiasts, and in figuring the expense of printing these catalogues and advertising them appropriately your mail order man must have his nerve with him, because the proposition calls for sums of money in this department of publicity that is almost akin to the salary of the president of a modern Life Insurance Company. First of all, having grown his stock, the next move is to determine how much will be safe to invest in selling it. I am told that the gentlemen who construct the modern greenhouses of to-day are diligent in the prosecution

of their business—that to intimate that one intends to build means a busy time with our genial solicitor but if you have never been in contact with the gentleman who solicits for our large printing houses there is in store for you an experience that will add much to the zest of living. Having, we shall assume, survived his strenuous preliminary of placing the printing contract, the work of preparing copy for the printer means weeks, and in many cases months of careful, painstaking labor. The material for each department is collated from time to time throughout the year, the space it is to occupy is determined upon, then the material is carefully edited and made to fit into the allotted space, all of which requires an outlay of energy that would be almost impossible in the short space of time given to the work, unless these details were not carefully systematized.

At all times it must be kept in mind that the matter of postage upon big editions is a very serious item, and where the weight exceeds even by the smallest fraction of an ounce, one cent is thereby added, the rate being one cent for every two ounces or fractional part thereof. Having finished the catalogue, they are mailed to the most distant States at the most seasonable times, that the suggestion produced by the arrival of the catalogue will not be lost through unfavorable weather conditions. In the Rose trade the period of activity is confined from the 15th of January to the 1st of June. Orders must be handled with great skill and dispatch, and it is not uncommon in our large establishments during the busy days to fill an order a minute. It will be seen that the average mail order man has no extended periods of relaxation, for having placed his advertising campaign in operation he is called upon almost immediately to see to it that the promises and conditions he has set forth in his literature are made good, therefore, as a rule, he assumes personal supervision of the order department. He must of necessity know the business thoroughly, and must ever be upon the alert to secure the very latest and most meritorious varieties, and it is here that his acquaintance with geographical conditions must serve him in good stead, for a Rose that succeeds admirably in New Orleans will not bring satisfaction to the planter in Boston, and as all parts of the country must be served, the mail order man is keenly alert to test the merits of every new Rose introduced. He must ever keep in mind that to advance his business he must first satisfy the public.

The mail order trade has developed wonderfully within the last ten years, and I am firmly convinced that it is but in its infancy. The study of human nature enters largely into its success or failure. It must be realized that to sell goods to let us say a quarter of a million different individuals through the medium of printers' ink, requires on the part of the mail order man first of all, honesty of purpose and forceful and attractive descriptions, such as will beget the confidence of the average buyer.

This business is largely cash, which speaks volumes for the confidence in which this class of rose growers is held, when we realize that the flower

GROUP OF RAMBLER ROSES.

Exhibited by M. H. Walsh, Wood's Hole, Mass.

buyers of the country intrust to their keeping annually certainly not less than five million of dollars, and this before a dollar's worth of goods is delivered.

The time is here when closer affiliation between the mail order trade and those engaged in forcing Roses for the market will redound to the advantage and welfare of this Society. Right here would like to say that our co-operation in bringing before the public new American Roses may be counted upon, and I would encourage our growers to greater efforts in this department of work. The catalogue man always wants new and meritorious varieties. Heretofore he has depended very largely upon Europe for new Roses, and in the majority of instances these new varieties from abroad have not adapted themselves to our climate. The demand is here, and if by concentrated encouragement given new candidates for favor we increase the list of really meritorious roses, we are advancing, if I am not mistaken, one of the cardinal principles of this organization.

It is to be deplored that many of us assume a harsh attitude toward many of our new American roses. It must be borne in mind that there is a vast difference to be expected where the grower of a new rose has but a limited quantity of plants to work from, than the grower who has thousands of plants from which he may select a dozen exhibition blooms. I might add, also, that there is an almost unlimited field for free blooming roses that will withstand the rigors of our northern winters, so, while we are ever ready to welcome more Golden Gates, Richmonds, Queen Beatrixes, Tom Fields, and Miss Kate Moultons, let me urge you to keep in mind the needs of the mail order trade for hardy, rugged, free blooming roses, adapted to the coldest parts of the country. In this class there has been few additions within recent years.

There is a great field open for the hybridization of roses based for their constitution upon such classes as Hybrid Perpetuals and Rugosas, the Wichuraiana Seedlings, which are such a notable feature of the exhibition, and if our American hybridizers will work along these lines, the results will best suit the peculiarities of our varying climate, and I am confident that it will be but a comparatively short time until we will take our place as leaders in the production of new and useful roses.

The next on the program was a paper on rose growing for cut flowers by J. J. Curran of Elmira, N. Y. (See next week's HORTICULTURE.)

A paper by A. Farenwald of Roslyn, Pa., was next in order.

The Deterioration of Forcing Roses—Its Causes and Effect.

By A. Farenwald.

"Our Failures," I might justly call this introduction to this subject. Little do we hear of these failures in our trade papers. Why? Because very few care to publicly ventilate their failures. Pride, no doubt, often prevents growers from proclaiming these, whereby others might gain valuable information. One of the main objects of the Rose Society is to seek and distribute this information concerning roses.

In handling this topic I shall merely confine myself to stating facts which all of you, I am sure, have more or less come in contact with, leaving it for the discussion to find the cause and remedy, if it is possible.

In the first place, are our species of forcing roses deteriorating? If they are, why? Can anyone prove by their records that they are still producing as many flowers per plant as they did in the early stages of their introduction, as in Brides, or Maids, Beauties, or any other older forcing variety? If they are not, what seems to be the reason?

In years gone by it was a common thing to see Brides and Maids growing from young plants on own roots in one season to a height of from four to five feet, giving from thirty to forty, or even more, flowers on good, stiff stems per plant. But, how often do we see it now?

Again, why have so many growers been forced to introduce the system of grafting in growing Brides, Maids, and nearly every other forcing rose, with the exception of Beauties, where in former years plants on own roots did as well and better? Diseases were then as they are now, but were conditions as favorable to them then as now? Should conditions be more favorable now, why should such be the case? Are we less careful in the methods of propagation, or too much addicted to the use of highly concentrated fertilizers? Whatever the cause or causes may be, the fact remains, that places which were known for their excellence in growing Brides or Maids had to cease growing them grafted on own roots.

With American Beauty, our strongest growing forcing rose, the same state of affairs holds good. Here is an illustration, recently told me by a grower of Beauties who had remarkable success with them. In the first year they brought him \$16,000; year after year, however, they gradually brought less, until eight years later they only brought \$3500, with the same amount of plants as at first. Of course, he had to give up growing them. Can anyone throw light on this and similar cases happening all over the country?

In concluding, I hope that the members will take a lively interest in discussing these important questions, and they will also appeal to all practical rose growers over the whole country, who, if they should read them, and think they have any solutions for some of these vital questions, will take opportunity to state them in their best beloved trade paper. Even though it be but a few lines, I am sure they would be greatly appreciated by all concerned.

Dudley M. Pray of Boston then read a paper on soluble fertilizers, which evoked much discussion.

Mr. Pray was plied with questions on this most important subject and the discussion was only brought to a close by the arrival of 11 o'clock and a motion to adjourn until 2 p. m. Saturday.

A paper on "The Retailer's Part in the Introduction of New Roses" was on the program, but the writer, George Asmus of Chicago, was prevented from attending the meeting by sickness in his family. Owing to the lateness of the hour it was voted that the paper be read by title only and printed.

Saturday's Session.

The meeting was called to order at 2.30 p. m. Election of officers was the first business. President Montgomery and Secretary Wm. J. Stewart declined renomination.

Messrs. Robt. Simpson, P. J. Lynch and H. A. Siebrecht were nominated for president. On balloting, Mr. Simpson was elected. F. R. Pierson for vice-president, Harry O. May for treasurer, and Benj. Hammond for secretary were each elected by a unanimous vote. A. A.

Manda was elected for one year to fill the unexpired executive committee term of M. H. Walsh, resigned. Peter Bisset and J. J. Curran were elected each for the three-year term on the executive committee to succeed H. A. Siebrecht and Peter Crowe.

The question of the location of the next meeting was then discussed at length. Rochester, New York, Kansas City and Chicago were mentioned, sentiment favoring the latter, and a motion to this effect, but referring the final selection to the executive committee, was carried.

Votes of thanks were extended to the Massachusetts Horticultural Society and the Gardeners' and Florists' Club of Boston for their courtesy and hospitality, to the A. T. Stearns Lumber Company for loan of mantels, to the donors of the special premiums, to the gentlemen who had prepared papers and to the press. The meeting then adjourned.

The Banquet.

"The rose, the flower of love,
Mingle with our quaffing;
The rose, the lovely leaved,
Round our brows be weaved,
Genially laughing."

The banquet hall of the Brunswick was indeed a scene of brilliant beauty as the company of one hundred and seventy-five ladies and gentlemen, marching to the music of an orchestra, filed in and took their places at the flower decked tables after a formal reception by President and Mrs. Alexander Montgomery in the Venetian parlor. Tables, mirrors and chandeliers were resplendent with rich plants, baskets of orchids and vases of roses, carnations and other cut bloom, all contributed by the generous growers associated with the Gardeners' and Florists' club of Boston. Each lady wore a big bunch of violets, the gift of Wm. Sim. The banquet itself was simply faultless, a monumental credit to the entertainment committee and to the hotel. When the last course had been disposed of President James Wheeler of the Gardeners' and Florists' Club of Boston made a neat little speech of welcome, congratulating the American Rose Society on its splendid exhibition, and then called on Prof. Louis C. Elson as toastmaster. The toastmaster's introductory remarks were unique. He said:

"It is the custom among civilized nations, when several are gathered together to eat and drink, to select a few victims who shall be offered upon the altar of speech-making. For these victims the soup hath no charms, and the ice cream passes unheeded by; they are thinking of their speech. The savages had a much simpler plan; after eating they went to sleep. On this occasion, however, we will not let any of you go to sleep. On the contrary, we shall keep you very wide awake by speeches and songs."

After acknowledging that the flowers of rhetoric were the principal flowers with which he had any great experience and drawing an analogy between the Conservatory of Music, where he officiated, and a "hothouse" he continued:

"But I have found some of my most delightful relaxation in company with florists and growers. A more loyal and true-hearted and generous set of men does not exist. And when they found it proper to end the greatest

rose exhibition ever given in America with a banquet and offered me the position of toast-master I said to myself, 'I will not quail on toast.'"

He then called upon Alexander Montgomery, the "man behind the gun," the "man under the glass," president of the American Rose Society.

President Montgomery disowned any ambition as an after-dinner orator. He paid a graceful compliment to the youth and beauty and manliness around the tables, and in the name of the American Rose Society expressed thanks for the hospitality extended and the honor conferred upon the rose, the undisputed queen of flowers.

Robert Simpson, president-elect, next spoke, telling of his disinclination to talk—a characteristic that possibly was responsible for his selection as president, as workers and not talkers are wanted for office. He characterized the exhibition in Horticultural Hall as the best, in all respects, ever gotten together in this country.

The next toast, "The Massachusetts Horticultural Society," was responded to by the secretary of that society, W. P. Rich. Mr. Rich extended the greetings of the old society to the representatives of the outlying districts of New York, Philadelphia, Rochester, etc. He declared that although now 77 years of age, in active usefulness and proud of the achievements of the past, yet the Horticultural Society has its face turned towards the rising sun and is prepared to renew its youth. Having plowed and furrowed the field and sowed the seed, it was now glad to welcome and to co-operate with the younger societies, of which the Rose Society is one. He thanked the visiting society for the magnificent exhibition which had proved such a delight to the Boston people and promised that no matter how often the organization might visit Boston it would find the doors of Horticultural Hall always open.

Miss Florence M. Pettigrew, daughter of J. A. Pettigrew, then sang two songs beautifully, her singing of "Coming Through the Rye" creating great enthusiasm.

F. R. Pierson, as one of the officers-elect of the Rose Society, being the next speaker, said that the next administration would find difficulty in maintaining the Boston standard. He especially complimented the local people on their free admission of the school children to the exhibition. He asserted that the children are a bigger factor in popular floral education than the daily newspapers.

W. C. Barry of Rochester, N. Y., was next introduced, as president of the Western New York State Horticultural Society. Mr. Barry spoke in hopeful words of the future of the American Rose Society. Flower culture he declared to be the most honorable and elevating work on the face of the earth. He hoped the time would soon come when the advantages of these splendid exhibitions of the rose growers' art should be more apparent to the whole people.

After a couple of bass songs by Mons. Plancon, Peter Fisher was called upon as a representative of the sister organization, the American Carnation Society. Mr. Fisher told of his delight at the unprecedented exhibi-

tion of the Rose Society and said that the success of one branch of the floral family is an inspiration to the others. The rose, he added, would always be Queen of Flowers.

Col. W. W. Castle was the next speaker. The toastmaster introduced him as an Ohio man who, with the Ohio man's well-known capacity for filling any position, would respond for Boston. The colonel was in his breeziest vein and was both witty and eloquent as he contrasted the imaginary hide-bound, puritanical Boston with the genuine article, as evidenced on this occasion. Boston he characterized as the hub of art, literature, and everything that goes to make men better, whose lachstring is always out and whose people are never so happy as when entertaining company.

Fred Sander of London, who was next on the toastmaster's list, expressed his delight at having been so fortunate as to arrive in this country at a time when he was privileged to see such an exhibition—one that, he confessed, if it could be transported to London, would create a bigger sensation than any floral exhibition ever seen there. The remarkable specimens of American Beauty and Richmond were among the finest horticultural exhibits he had ever seen. He further complimented the gardeners for their orchid displays, the *Miltonia vexillaria*s being better grown than any he had seen elsewhere.

P. J. Lynch of West Grove, Pa., spoke briefly for the mail order trade, its magnitude and importance in the dissemination of the horticultural sentiment. George C. Watson of Philadelphia, followed for the seed trade. Mr. Watson applauded the object lesson given to other societies by the invitation to the children to visit this Boston show. Frank B. Cannell sang a song, and then came a whirlwind speech from Benj. Dorrance, full of wit and sentiment. He paid his respects to the rose growers who are growers for market, for prizes, for no prizes, and for surprises, and to the ladies, who are essential to the prosperity of the flower trade. He declared work and gentility to be a great combination, and asserted that "if we do throw bouquets at each other, we do it with a good heart and a full stomach."

A. Farenwald, of Roslyn, Pa., came next and, with a sidelong glance at the row of ladies on the next table, respectfully submitted that Boston was raising very brainy American Beauties. The patronage of ladies at the exhibition had been a surprise to him. A few appreciative words from George Burton, of Chestnut Hill, closed the testimony of the Pennsylvanians who had made such a successful onslaught on the prizes, and then came votes of thanks to toastmaster and committees, and a verse of "Auld Lang Syne" brought to a close this long-to-be-remembered occasion.

During the speaking, the hotel guests, who thronged the adjoining vestibules, sent in the following communication:

"The Hotel Brunswick guests, appreciating your roses very much, wish to offer this appropriate toast:

Here's to a world of Roses,
Each one filled with dew,
Each dewdrop filled with happiness
For every one of you."

um height, 5-10 flowers per plant, 10c. per bud. **Lilium Multiflorum**—have two houses full, had unusual good luck with them; only good plants are shipped. These lilies are raised from the best bulbs that money could buy; 10c. per bud; from 4-10 buds per plant, plants under 4 buds, 12c. per bud. **Begonia Vernon**, 5 in., pots, fine showy stuff, red or pink, \$2.00 per doz. **Hyacinths**, all shades, raised from best bulbs of my own importation \$12.00 per 100. **Tournefort Tulips**, three bulbs in 4-inch pot, the best selling double tulips in the market, sell at sight, \$1.50, per dozen pots. **Von Sion Daffodils**, double nosed bulbs, three bulbs in one 6-inch pot \$2.00, 2.50, 3.00 per dozen pots. **Araucaria Excelsa**, 7-inch pots, 30-40 inches high, 5, 6, 7, tiers, \$1.25, 1.50, 1.75, 2.00 each. **Crimson Ramblers**, large plants, only 7-8-inch pots, \$1.50, 2.00 each.

Cash with order please. Mention if pots are wanted. All goods must travel at purchaser's risk.

GODFREY ASCHMANN, 1012 Ontario Street, Philadelphia, Pa.

The decorations were under the direction of Edward Hatch, and well demonstrated that gentleman's exquisite taste.

Some of the Toastmaster's Interlocutory Remarks.

"Whenever I go to Philadelphia I'm sure to meet George Watson somewhere. When George and I meet it is like mixing the blue and white papers of a seidlitz powder."

"There is a big town by the Delaware. There's many a jolly good fellow there. But we had our surprises. They grabbed all the prizes, And they're taking them home, we are all aware."

"New York is a city southwest of here. The inhabitants are white, and are said to be very sociable. Twenty-eighth street is full of them."

ROSE POEM.

Old Shakespeare once wrote of a Rose,
And curiously asked "What's in a name?"
Yet we all prize the names that are borne
By these fragrant contestants for fame.

Some names had their rise in fair France,
Though they now in our catalogues glow,
As Madame Abel Chateauay,
And President Carnot may show.

And politics too, and finance,
Off use floral names as their organ.
You'll find here the fair Mrs. Ames,
And the spouse of the rich Pierpont Morgan.

A bride and a bridesmaid are here,
Who sit in the loftiest state,
The fame of their beauty has sped
From Wellesley to far Golden Gate.

There's a rose which the Irishmen prize,
They may praise it in brogue or in blarney,
For there's never a daintier flower
Than that which we label Killarney.

And Edgely's sweet monarch is here,
With Ivory sceptre she's seen,
But Liberty still lifts its head,
In spite of the rule of this queen.

EASTER PLANTS

Azalea Indica, Mme. Van der Crayssen, the best double pink azalea under cultivation: the People's choice, a special import, just right for Easter, in bloom and bud; full of buds, as round as an apple, something fine to look at, have only large plants; price, \$1.25, \$1.50, \$1.75, \$2.00 each; other varieties, assorted colors, 75c., \$1.00, \$1.25, \$1.50 each.

Spiraea Gladstone—I have a house full; the fine new variety, full of buds: it is a sight to look at; 6 and 7 in. pots, 50c. and 75c. each. Extra specimens, \$1.00 each. **Spiraea Japonica**, 6 in. pots, large plants, 35c., 40c., 50c. each. **Hydrangea Otaksa**, pink; have a house full, 6 in., 7 in., 8 in. pots, all well set with flowers, 40c., 50c., 75c., \$1.00, \$1.25, \$1.50 each. White 75c., 1.00 each. **Cinnearia hybrida**, 6 in. pots, just right for Easter, large heads, price \$2.00, 2.50, 3.00, 4.00 per dozen. **Lilium Harisii**, full of buds, medi.

An Eucharist is weaving a spell
On the heart of MacArthur the brave,
And Uncle John beams on the pair,
While his petals benignantly wave.

There's one rose has held constant sway.
A rival? she scarcely need fear it!
But Richmond once captured a throne,
And again he is coming quite near it.

But sing of them all as we may,
We still must pay homage and duty,
To the one blushing queen of them all,
And that's the American Beauty.

And ne'er in this country before
Has there been such a great exhibition.
In spite of the snow and the ice,
The flowers were in splendid condition.

A Bostonian never repines,
His passing regret he disguises,
As he watches the visitors go,
With most of the coveted prizes.

And we thank all the growers tonight,
For a hundred good deeds we might mention.
Hurrah for the roses they've shown
And hurrah for the great Rose Convention.

OLD MOSES.

Harvard's Stein Song. By Bullard.
Old Moses kept a flower stand
At the corner of the street.
You put a quarter in his hand
To get a bouquet sweet.
He often made his blooming trade
To bring him lots of pelf,
But whenever he gave his plants a drink
He took two drinks himself.

Old man Moses, he sells posies,
All he knows is, the prices of roses
So earnestly he plied his trade
He'd never go to feed.
He always said he was afraid
His flowers might go to seed.
One windy day he withered away,
They buried him with his boots,
And now I suppose his jolly red nose
Is smelling the flower's roots.

Old man Moses, now reposes,
Where the roses, deck his toses
Under the roses, Moses nose is.

The A. H. Hews Company presented a \$50.00 cup instead of a \$25.00 to the winner of the prize offered by them at the Boston Rose Exhibition.

ROSES POT NOW FOR DECORATION DAY

BABY RAMBLERS, FINE STRONG STOCK, (Field Grown)
\$3.00 per dozen \$25.00 per 100

HARDY PERPETUAL ROSES

I offer all the following varieties in strong, low budded, two year old bushes

\$1.25 per 10,	\$10.00 per 100,	\$90.00 per 1000,	250 at the 100 rate
Abel Carrier, crimson		Gen Jacqueminot, crimson	
Alfred Colomb, carmine		Mad. John Laing, pink	
Ball of Snow, pure white		Mabel Morrison, pure white	
Baron de Bonstetten, dark crimson		Mme. Chas. Wood, carmine	
Baroness Rothschild, pink		Margaret Dickson, white	
Captain Christy, flesh color		Magna Charta, dark pink	
Chestnut Hybrid, red		Perle des Blancs, white	
Earl of Dufferin, bright red		Persian Yellow, yellow	
Frau Carl Druschki, snow white		Prince Camille de Rohan, crimson	
Fisher Holmes, dark crimson		Paul Neyron, dark pink

Seed Importers and Growers

1018 Market St., Philadelphia, Pa.

SAN FRANCISCO NOTES.

Frank P. Shibeley, a veteran florist of San Francisco, received a splendid floral order this week from a florist in Lowell, Mass., for quick shipment to the City of Mexico, the stock being largely violets and roses. Mr. Shibeley, who successfully conducted a down-town floral depot for many years, has recently removed his store a mile westward, to the corner of Polk and Sutter streets.

The news of the opening of an improved foreign market comes as a welcome surprise to ranchers of the Santa Clara valley. Last year was better than others, yet many of the growers and packers about San Jose and neighboring towns, the center of the prune district of California, complained because of their inability to market their goods at a fair profit. So gloomy was the situation that some of the growers cut down their prune orchards in despair of ever getting reasonable returns for the time and money invested. It is probable that the outlook for this year will save many orchards that would otherwise have been sentenced to the ax.

The nursery business of the season has closed at Fresno, Cal., with a record unequaled in the last twenty years. The local yards are absolutely sold out of peaches, and estimates of the new acreage planted in this district alone exceed 7000. The demand for Muscat grapes has been very large, notwithstanding the unsettled condition of the raisin situation, and more than 3000 acres of new vines have been set out. Apricots and citrus stock are also favorites, and, in fact, every variety of fruit tree has been sold as never before, except prunes. Prices are reminiscent of old boom days. Peach trees have sold at an average of \$225 a thousand, as against \$140 last year, and sales are on record of the unprecedented price of \$350 for the Muir variety. Los Angeles and Sacramento counties bought all the pear trees. Large shipments of deciduous fruit stock of all varieties have been made to Mexico, South America, South Africa and Australia. The local result will be a great increase in the output of fruit in two or three years.

FIRE RECORD.

A fire which started around the boiler did about a thousand dollars' damage to the greenhouses of W. F. Spry of Manchester, Mass.

The four-story seed and agricultural warehouse of W. W. Rawson & Co., 12-13 Faneuil Hall square, Boston, was completely destroyed by fire on the morning of March 23. Loss on building and contents \$100,000. Insurance \$25,000.

LIST OF PATENTS.

Issued March 20, 1906.

- 815,495. Lawn Sprinkler. Oscar P. Waggener, Klamath Falls, Oregon.
- 815,660. Fruit Picker. Charles L. Uthus, Harvard, Ill.
- 815,901. Nursery Tree Digger. Christian Brosey, Medway, Ohio, administrator of David Feigly, deceased.

NEWS NOTES.

Winchester, Mass., has appropriated \$13,000 for gypsy and brown-tail moth extermination during the current year.

The Connecticut State Board of Agriculture at its meeting in Hartford, March 15, appropriated \$1000 for fighting the gypsy moth.

Nathaniel Hannaford opened his new greenhouse at Gorham, Me., March 15, with a social evening, at which music, refreshments and dancing were the attractive features.

John Scott, of West Newton, Mass., has sold his property, which included three large greenhouses besides pear and peach orchards, and it will be converted into a private estate.

Among the innovations on the new steamship, the Kaiserin Auguste Victoria, which makes her initial trip from Hamburg to New York on May 10, will be a magnificent palm garden with fountains.

COTTAGE GARDENS CO., QUEENS L. I.

Three Sterling Carnation Novelties

Winsor, White Enchantress, and Helen M. Could

There is nothing about any of these varieties that we wish to conceal; therefore, we cordially invite all carnation growers to pay us a visit. Come at any time.

WINSOR—Winner of Lawson Silver Medal.

This is sure to prove a winner. Nothing approaches it in color, which is a clear silvery pink—a shade between Enchantress and Mrs. Thos. W. Lawson—and much more beautiful than either. In fact, it is just the shade that we have all been trying to get. The color will make it sell in any market. The stem is just right. The flowers are considerably larger than Lawson and much better shaped. As a grower it has everything that can be desired. So far we have not seen any large-flowering variety quite so free as Winsor.

WHITE ENCHANTRESS.

A pure white sport of Enchantress, at once the most popular and most profitable carnation grown today, on account of its size and stem and freedom with which it blooms. White Enchantress is identical in every respect but color. Those desiring quality as well as quantity will find it in White Enchantress.

HELEN M. COULD.

This is a beautiful variegated sport of Enchantress. The ground color is a lovely shade of clear pink, the variegation carmine, making an exquisite combination of colors, besides being something distinctly new. At a short distance the variegation does not show at all, the general effect being a beautiful shade of dark pink. Growth, habit, size, and stem are the same as Enchantress.

We have fine stocks, from which we can deliver healthy cuttings of Variegated Lawson, White Lawson, Red Lawson, Enchantress, Mrs. M. A. Patten, Lady Bountiful, etc.

Our Variegated Lawson is all that we claimed for it last season, and is giving the fullest satisfaction everywhere—the best in the variegated class. Come and inspect our stock of new and standard sorts

WM. SWAYNE, Kennett Sq., Pa.

Some People have taken our advice as published in My Maryland

these columns recently and are buying for trial. We reiterate here—if it succeeds with you as it does with us, it will prove the best white carnation you ever grew. Despite the variety's apparent failure in several places, we strongly advise all growers to give it a trial. We have been frank about its faults as developed in other places. We doubt if these will develop in many places.

Jessica we believe, will succeed generally and will prove to be the best red and white variegated ever disseminated. Few varieties show as strong constitution as this one does, and it is a wonderful producer. Extra fine stock of both varieties ready now. R. C. \$25 per d. \$200 per 100. \$100.00 per 1000. Pot plants, \$3.00 per 10 extra.

Send for our catalog, now ready.

We do not need to advertise Victory aggressively any longer. We are making prompt deliveries of Cuttings daily and are giving universal satisfaction. ENOUGH SAID!

CUT FLOWER MARKET REPORTS.

BOSTON The flower glut seems to be coming on apace and should favoring skies cooperate with the oncoming crop a sort of deluge may be looked for during the next two weeks. Our quotations do not tell the whole story as much material is distributed to the street fakirs at the close of the day's legitimate market, at prices that only apply to a surplus unloaded in bulk. Roses are rapidly increasing; so are carnations. Bulbous stock continues in oversupply. Narcissi are more plentiful than ever before in this market. Violets show signs of rapid waning. Lilies hold their own quite freely, longiflorums bringing, as a rule, about two dollars a hundred better price than Harrisii. Smilax is not scarce in this market although it is the traditional time of scarcity in that commodity. Asparagus is cutting into the smilax trade quite deeply.

CHICAGO Last week was the busiest week ever known during the Lenten season. This week there is a great improvement in all grades of stock. Carnations are very plentiful. Roses have increased in number as well as color. Beauties are very readily found. Bulbous stock is increasing in variety. Lily of the valley and violets continue steady in demand. Some extra fine smilax was shipped in which lost no time in being picked up and taken to a safe retreat. Other green goods can be found with ease.

COLUMBUS The craft does not look for any good business now before Easter. Carnations continue to be a flood. I must speak a good word for the La Detroit rose; it is very popular here. The florists cannot always obtain enough to satisfy the demand; customers rave over this beautiful shell-pink, peony-like rose. Everyone is making the most elaborate preparations for Easter. If the snow is gone and Easter week pleasant, there will be an enormous business done.

DETROIT At the commission houses we find good stock and lots of it. But the demand is lacking, carnations of all colors being undisturbed by buyers. Violets are selling slowly, but there is an increase in the sale of roses.

LOUISVILLE Business the past week was very good, especially with the retailers, while the weather was very bad for the growers. There has been an abundance of roses of superior quality; demand; there have been only occa-

sional calls for lily of the valley, and the supply of violets has been short. Mignonette, hyacinths, tulips, jonquils and daffodils are received in quantity sufficient to meet the steady demand.

NEW YORK The long deferred smashup in flower values has at last struck us and, with largely increased shipments of roses and carnations during the past week, and the attendant light demand, prices have fallen to a lower plane than at any time since Thanksgiving. Roses have suffered more severely than have carnations in the decline. With the exception of cattleyas everything is in ample supply for all demands.

ST. PAUL AND MINNEAPOLIS

In spite of our first spring rain, business started in well for this week. Last week was not so good but prospects are better now. Carnations of all kinds are plentiful. Roses, especially Brides, Bridesmaids and Chateau are in prime condition and are cut every day in thousand lots. There are plenty of double violets as there will be until after Easter, but the single ones are all gone except a few stragglers of very poor quality. The supply of bulb stock is fully equal to the demand and the quality is fine. Daffodils are large and vigorous and sell readily. Lily of the valley and Harrisii just keep up with the demand with none to spare. Among the potted plants rhododendrons and azaleas are leaders and sell at very good prices.

BUSINESS CHANGES.

Lubliner & Trinz have opened a branch store at 143 Wabash avenue, Chicago.

The Wright Floral Co. of Ottawa, Can., has been incorporated with a capital stock of \$40,000.

J. F. Ammann Edwardsville, Ill., has opened a new store in the Barnett building on St. Louis street.

The Piety Corner Conservatories, Waltham, Mass., have been purchased by R. T. Goinsalvas, who is making many improvements.

James McManus and James Hart, hitherto located on West 30th street, New York City, are to move to West 28th street in the near future.

The improvements being made in the store of W. W. Powers, Nashua, N. H., will place it among the up-to-date florist establishments in the state.

F. S. Hicks, G. W. Crawbuck of Brooklyn, N. Y., and J. C. Merritt,

Farmindeale, L. I., have incorporated under the name of Hicks & Crawbuck, with a capital of \$15,000.

A new retail establishment has been opened in the Reliance building, corner of State and Washington streets, Chicago, to be known as the Reliance Floral Co., with C. Pedersen as manager.

A new nursery and greenhouse concern has been incorporated to do business in Toledo under the name of The Perennial Gardens Co. The incorporators are well-to-do men not known to the trade, but the moving spirits are said to be old practical hands in the trade. They have secured a fine tract of land, where they will principally grow hardy perennials. Several houses will be erected this summer for the growing of cut flowers and miscellaneous stock and a store will be opened in the city in the fall.

My continued orders for the FUMIGATING KIND TOBACCO POWDER show that I prefer it to any of the other ways; it's, by far, the cheapest and best.

Why not ask for a free five pound trial sample, it's convincing, it only costs you the express charge. It's no tangled thing, hundreds write of it like Mr. H. Mayer. Our booklet tells how to fumigate a house 100x25 feet with it for fifteen cents. THE H. A. STOOTHOFF COMPANY, 119 West Street, New York City, N. Y.

THE GLASS SITUATION.

Within the past week developments in the window glass market both here and abroad have tended to strengthen the already firm situation and it is now very apparent that there will be a shortage in the supply of a number of the leading sizes, including those most frequently used in greenhouse construction. Prices made by the domestic manufacturers are now something like 12 1-2 per cent higher than they were at the beginning of the year and further advances are being made daily as the greater part of the product of the country is already sold up and the manufacturer who has any glass for sale seems able to command his own price for it.

In the foreign market reports of labor difficulties present and impending have made manufacturers reluctant to enter on new engagements and it is generally expected production in Belgium, which is the principal exporting market, will be very much curtailed after May 1st when a general strike has been planned by the glass workers.

For a prospective buyer of window glass it looks as though it would be good judgment to buy now any glass that may be needed before late fall as it appears that if orders are held back

both price and time of delivery are going to be uncertain.

Referring to the report of the state zoologist of Pennsylvania in connection with the lime, sulphur salt remedy for San Jose scale, it is interesting to note that the remedy offered by Benjamin Hammond under the name of Horicum is practically the same thing prepared and put up in convenient form for ready use.

WANTS

Advertisements in this column one cent a word. Initials count as words. Cash with order.

TO LEASE FOR A TERM OF YEARS my greenhouses consisting of about eighteen thousand feet of glass, all Hitchings & Co. boilers, and four of the houses are also Hitchings & Co.'s construction; city water on premises, two trolley lines one block, and railroad station two blocks from the premises; three miles from 34th St. ferry. Geographically they are in the centre of Greater New York. If you want a place this is a rare chance, so do not write but come see it, possession June 1st, 1906. Apply to Alex S. Burns, 128 4th St., Woodside, Queens Borough, N. Y.

FOR SALE—Two greenhouses, 23x95, 20x68, with hot water heating apparatus and well stocked with Carnations and Violets. Will sell as it is with dwelling house attached and 17,000 feet of land, or to be taken down and removed. Address 703 Chestnut St., Waban, Mass.

One experienced fern grower; one experienced man in stove and greenhouse plants; and one first class herbaceous man. Good wages will be paid to first class, capable man, and steady position. Address S. R., care HORTICULTURE, 11 Hamilton Place, Boston.

SITUATION WANTED by a young Protestant married man, as Gardener, or Foreman on a private estate. Life experience, references warranted as to character and ability. F. care HORTICULTURE, 11 Hamilton Place, Boston.

WANTED.—I would like to place my son, age 19 years, in a good private or commercial establishment. He has some knowledge of the business. Thomas Heskey, gardener to Lt. Gov. E. S. Draper, Hopedale, Mass.

Toadstools vs. Mushrooms

Toadstools resemble mushrooms very closely. Experts can easily distinguish the difference between them.

One way to tell is by eating them—but this is rather risky.

It is the same way with greenhouse material—it makes a difference where you get it and the kind you buy.

Better buy your material from those who have experience.

Let us demonstrate to you why it will be to your interest to use our material. If interested write us.

JOHN C. MONINGER CO.—Chicago
117 E. BLACKHAWK STREET

The Standard Steam Trap

Certificate of merit awarded at Washington, D. C., Florists' Convention. For simplicity, durability and perfect satisfaction it has them all guessing. It is in a class by itself. To see it work a large plant as well as a small will convince the most sceptical that it is the Florists' Friend.

The Standard Ventilating Machine still leads as the most durable, easiest working and the all-around satisfactory machine.

The Duplex Gutter is gaining all the time, over 12,000 feet sold thus far this season. Catalogues free.

FOR SALE Six Large Greenhouses

In a city of 25,000 inhabitants, 35 miles from Boston, a range of six large Greenhouses, propagating house and office and boiler room all of modern construction, heated by a new 90 H. P. steam boiler. seven acres of fine land with residence and stable. Houses stocked with 15,000 carnations and 10,000 bedding plants. 25,000 young carnations ready to plant out. Business wholesale and retail consumes all that can be grown. Address, N. ASH, care of Horticulture.

This is The Thorough Way

We pack for shipment our frames and sash. Every precaution taken to prevent breakage of glass. We don't know of a sash that is made as honestly, as strongly. They have all the strong points of perfect joints, steel dowel pins and the round iron brace and tie d.

The frames are made of cypress same selected quality as the sash. Any one can erect them, it is only a matter of bolting up the angle iron at the corners, and dropping the rafter rail in place. Those angle irons are not only a matter of convenience, but make a perfectly rigid joint—a frame that will outlast any two ordinary ones and our gardener friends have proven it.

GOVERNOR HERRICK

The New Single Violet

Governor Herrick, is the finest and freest bloomer ever offered for sale, the plants producing over 200 blooms in a season lasting from Oct. 1 to May 14. The color is a rich, dark purple, large open flower, on a very strong stem. It is the best keeping Violet on the market and received special mention at the Boston Carnation Convention after being picked four days and traveling 700 miles before being judged. At Louisville, Ky., the Governor Herrick was one of the sensations of the exhibition.

Prices of rooted cuttings are as follows: Per doz., \$2.00; per 100, \$10.00; per 1000, \$75.00; 5000 or more, \$60.00 per 1000. All orders will be filled in rotation, with the finest stock ever sent out. Write me to day for full description of the Governor Herrick.

GUTTMAN & WEBER

43 West 28th Street and Lynbrook, L. I.

New York, April 5th. 1906.

To Carnation Growers everywhere:

Notwithstanding the phenomenal demand for Victory every day of every week since it was placed on sale we are glad to tell you that we will have right along an abundance of Cuttings sufficient to meet the demand no matter how large it may become.

Victory's career has been a remarkable one. The highest honors have been accorded it wherever exhibited. It still stands pre-eminent amongst the Scarlet Carnations. No flower compares with it in the Carnation family for its keeping qualities. A journey across the ocean found it in fresh condition upon arrival. No Carnation is more prolific than Victory, nor does any Carnation give you as large a flower. Blooms averaging three and a half inches. A Victory plant has no surplus grass, every shoot means a flower. Victory comes in early and you want a Scarlet Carnation for Thanksgiving and Christmas Trade.

A Batch of strong Cuttings from soil and pots up to three inches are now ready for delivery. Prices: \$12.00 per hundred, \$100.00 per thousand, 250 at the thousand rate. Discount for cash with order.

Yours very truly,

Guttmann & Weber

FOR SALE A CONSIGNMENT

We have just received a large consignment of HOLLAND GROWN PLANTS, all in first class condition, consisting of ROSES, FRUIT TREES, CLIMBERS, RHODODENDRONS, Etc.

ROSES. HYBRID PERPETUAL. Low budded, two year old, extra strong, strictly first class, and in best of condition, and in the following varieties in bundles of 10 for \$1.00; \$8.00 per 100; \$75.00 per 1000.

(No less than 12 of any one variety sold).

Baroness Rothschild, Captain Christy, Con. Ferd. Meyer, Duke of Edinburg, Jules Margottin, La France, Magna Charta, Margaret Dickson, Mad. Gabriel Luizet, Mrs. John Laing, Mad. Plantier, Victor Verdier, Gen. Jacqueminot, Paerol, Paul Neyron.

	per 10	per 100
OTHER ROSES.		
1 euchstern (New Polyanthus)	\$1.50	\$12.50
Frau Karl Druschki (Best New White)	1.50	12.50
Hermosa (Hybrid Tea)	1.25	10.00
Clothilde Soupert, 3 year field grown,	1.25	10.00

	per 10	per 100
RAMBLER ROSES.		
Crimson, Extra Strong, 4 feet canes, many branches,	\$1.25	\$10.00
Crimson, Very Strong, 3 feet canes, many branches,	1.00	8.00

	per 10	per 100
Crimson, Strong, 2 ft. canes, many branches,	.75	5.00
White, Pink, Yellow, 4 to 6 feet canes,	1.00	8.00
Wichuraiana Hybrids, Extra Strong, 3 yr. old,	1.25	10.00

RHODODENDRONS.

	Ea.	Doz.	100
PONTICUM and CUNNINGHAMII,			
Fine plants, 18 inches high, 10 to 20 Buds,	.35	\$3.50	\$25.00
Very large plants, 2 ft. " 30 " 40 "	.75	8.00	50.00

FRUITS.

PEARS, French Pyramids (Fine for forcing). Large grafted trees, 4 to 6 feet high, Each, 75c.; Doz., \$8.00; 100, \$50.00; in the following named varieties:—Beurre D'Amanlis, Conseiller de Lavieres, Gen. Todleben, Le Lectier.

BLACK CURRANTS; Extra Strong, large plants, 4 feet, many branches, \$1.00 per Doz., \$7.50 per 100.

AKEBIA QUINATA. Extra strong roots, 8 feet Runners, Ea., 25c.; Doz., \$2.50; 100, \$20.00.

If you are interested in **HARDY PERENNIALS, EVERGREENS, FLOWERING SHRUBS, DAHLIAS,** and **BULBOUS STOCK,** for Spring planting, get our **SPECIAL PRICE LIST** of Field and Pot Grown plants. Prices similarly low to the above.

MISS KATE MOULTON

A New Rose OF Sterling Merit

Color—A beautiful light pink.

Shape—Like Richmond, but fuller.

Size—Larger than Richmond.

Foliage—Dark, heavy as American Beauty.

Growth—Vigorous, producing strong bottom shoots.

Blooming—Steady; not a cropper.

Free from Mildew and has never yet been affected by Black Spot. Best Temperature 55° to 58° night. Shown at the leading flower shows where it has received high praise, especially for its unrivalled keeping qualities. **Miss Kate Moulton is a winner and has come to stay.** We have a limited supply of plants which we are offering from 2 1-2 inch pots, at the following prices:

100, \$30.00 500, \$125.00 1,000, \$200.00

Lots of 5,000 and upwards.

\$175.00 per 1,000

We also have grafted stock ready now for delivery at 25% additional to prices on own root stock.

Orders for April and May delivery being booked now
by the originators.

Primula obconica grandiflora

CARMINEA

ROSEA

The new hybridized giant flowered obconica primroses are among the most attractive flowering plants for the market florist, and doubtless they will become widely known in the near future. Their abundant flowering habit, strong and willing growth during fully six months and easy handling, gives them a superiority far ahead of the old and well known Chinese Primula sinensis; in fact it is already the rival and in a few more years when better known, it will be the principal primrose grown for the Christmas and Easter wholesale trade.

Primula obconica is a native of Central China, and was introduced in 1882. Since that time many crossings have been made by thorough florists. In the beginning it seemed not to take any pollenization, until in 1898, when its development came out in crossing it with the Chinese primrose. Well known specialists here and abroad, especially in Germany, have worked with great devotion to improve this new hybrid, and they thus far succeeded in obtaining five distinct colors and two types, which all come true from seed.

To grow obconica primroses from seed is much easier than with the old Chinese primrose. The best time to sow seed is from February until the end of May, and a mixture of leaf mould with sharp sand will give the required results. Sow the seeds carefully in low pans or boxes, with plenty of drainage; sow very thinly and evenly, and do not cover them at all. Place the same in a proportionate moisture of about sixty degrees, and protect against full sunlight, also cover the pans or boxes with glass. After the seeds germinate, take the glass off and cover again only during night time,

which is to protect the little seedlings from being eaten up by snails. The seeds require about two or three weeks to germinate. After the little seedlings have been twice transplanted in a mixture of light sandy soil, free from any fresh manure substances, and having four or more leaves, they should be planted in two or two-and-a-half-inch pots. After they have become well established and well rooted, again repot in four-inch pots and continuously repot until they are in six or seven, even some of them in eight-inch pots; or more advisable are the so-called seven or eight-inch azalea pots.

To keep obconica primroses in a healthy and well shaped growth during the summer, doubtless they require plenty of cool air and even moisture, also careful watering; therefore it is preferable during the summer months to hold them in a cold frame, not deeper than about twelve to eighteen inches, plunged in soil or ashes, covered with shadders made from small laths, and especially protected against full sunshine. As soon as the cold nights start bring them into the lightest place in your greenhouse and let the temperature be not higher than sixty degrees nor lower than forty degrees in the night time. During the winter months careful attention should be paid to the watering.

C. J. Stanger

Garden Culture of Sweet Peas.

Twenty-five years ago sweet peas were very little cultivated, as compared with the enormous amount of seed that will be planted this coming season. In fact, I think it would be quite conservative to say that fifty pounds of seed is planted today where one pound was then. In those days our list of varieties was confined to a comparatively few shades of color; we had white, purple, scarlet, pink, and quite a few combinations of colors; such as scarlet and white, and scarlet-striped. Many of you will remember the old names; there were Painted Lady, Invincible Scarlet, Captain Clark, and a few others. Before me as I write, I have a prominent seedsman's catalogue of the year 1885; and three lines are devoted to sweet peas—describing white, scarlet, and mixed. When, twenty years ago the coming summer (August 14, 1886), the writer was able to make an exhibit of six distinct colors of sweet peas before the Massachusetts Horticultural Society at Boston, he thought that he had a very nice collection of sweet peas. Today the named varieties of this flower are numbered by hundreds. But it is not alone this remarkable increase of named kinds that has given the sweet pea the truly wonderful position it now holds amongst annual flowers, but also the simply marvelous advance that has been made in the size of the individual flowers, and the increased number of flowers on one stem. The sweet pea of today in its best form is something so exquisitely beautiful as to be beyond the power of pen to describe. After years of experimenting, the method of cultivation, that taken one season with another, gives me the most satisfactory flowers is as follows: The earlier sweet peas are sown in the spring the more thriftily the vines will grow, and the larger will be the flowers gathered from them. Just as soon as the soil is dry and mellowed sufficiently to receive the seed, it should be sown. The seed should be planted in rows, and covered at least eight inches deep. This is done as follows: Having prepared the ground and made the rows the desired depth, we may drop the seed and draw into the row soil enough to cover the seed two inches deep; as soon as the young plants appear through this covering, draw into the row two inches more soil, and so on until the trench has been filled up even with the surface of the ground. From the time the seed is sown until the young plants have started to run upon whatever supports are provided, the greatest care must be taken that the soil, at any stage, does not cake on the surface—keep the soil loose all the time for satisfactory results. Sweet peas must be bushed just as soon as well up. Use birch brush or wire poultry netting. Whatever the vines are trained upon must be very firmly secured in position, so that the vines when fully grown, being very heavy, will not be blown down. In nine seasons out of ten, the secret of success with sweet peas is to “plant them very early, and plant them very deep,” as above explained. Be most liberal in sowing the seed; sweet peas always do much better when sown thickly; put a pound of seed in not exceeding sixty feet of row. One last word, and I am done. Commence to gather the blooms from the moment the vines show color, and gather every fully opened flower after that daily. Do not allow a single bloom to wither on the vines, as when seed pods begin to form your sweet peas gradually cease blooming.

M. B. Fayson

The Eel Worm Question

Editor HORTICULTURE:—I have read in your issue of March 17 some notes by R. L. Adams on a subject that is very dear to the hearts of many rose growers (that “dear,” Mr. Editor, is a little joke of mine and I hope that you will not blue pencil it). The story of the life history of nematodes as there given is very interesting and instructive, and I am sure the treatment of a scientific subject in such a readable manner is always appreciated by your subscribers.

The point, however, to which I desire to call special attention is that, “The problem of control (of nematodes) is not difficult.” Well, well, this certainly is doubly welcome news to rose growers who have struggled for years to combat the ravages of this miserable little pest, which we are told has now been definitely located as an animal, although there are times when we tillers of the soil have been prone to class it with those infernal demons which have no physical being.

Can you not induce Mr. Adams to give us poor unscientific mortals who are thirsting for knowledge, a little more definite information on this subject? He has a sure method to “fix” eel worms “with green houses that are idle in the summer.” We are out of that cinch, however, as rose houses in this vicinity are generally pretty busy at that time of the year.

“Freezing will destroy large numbers.” That is good. We are able to take advantage of this while the soil is still in the field, but as a rule, the “large numbers” do not appear until they have multiplied in the roots, and as most of the forcing roses are not hardy under glass, we must be content with the execution we did in the field.

“The most practical method is to sterilize the soil.” Well, possible for cucumbers, but certainly not for roses. Give us a good rich, mellow loam that has not been used for roses and we will dispense with the sterilizing process. Suppose, however, we unfortunately get this sterilizing bee in our bonnets. Sterilize our sand for cuttings, sterilize the pots, sterilize the soil for potting, sterilize the soil for planting, sterilize the manure for top dressing, and finally sterilize all water before it is allowed to touch the soil. Does this seem the most practical method? Yet we must carry it out in full if we would annihilate the pest completely.

“Liming the soil . . . is helpful.” Personally, I have great faith in liming, but still, Dr. Stone, the best authority on nematodes, says that lime does not kill them. Nevertheless the practical rose grower knows that liming is helpful and up to the present time it is, at least to some of us, the “most practical method.”

“Mustard can be sown and when plentifully covered with galls pulled up and burned.” Now isn't that a lovely fairy tale? We sow mustard, and, as Mr. Adams says, the eel worms “enter and multiply.” After they have multiplied freely and grown good and fat we pull up the roots; some of them will come up, certainly not all. What becomes of those that are left? We have pulled up the original animals but have left their children, and perhaps, their children's children.

Verily “the problem of control is not difficult,” at least, with a facile pen and a copious supply of ink.

Alex. Montgomery, Jr.

Cypripedium caudatum

Cypripediums galore, seedlings by thousands, improvements on the old varieties in many cases, but occasionally we are charmed at the sight of an old friend. Such is *Cypripedium caudatum*, one of the most beautiful and interesting species, but though introduced in 1847 it is never seen in quantity. Here and there a plant, but always admired when in flower, its odd and graceful form demanding more than a passing glance the most indifferent plant lovers will stop and admire its beauty, while others considerably more valuable will be passed unnoticed. It delights in a slightly warmer temperature than most varieties and the plant in the accompanying photograph has been doing splendidly in the same spot for several years, making several nice clean growths, having as neighbors *C. Brownii*, *C. cardinale*, *C. leucorrhodum*, *C. Dominicanum* and other *seienipediums*. It requires liberal watering when growing and should not be disturbed too often; when you find a certain place in the house which suits it, let it remain there. I find this true with many *cypripediums*. A few years ago *C. Lawrencianum* could not be coaxed to grow, until finally we placed them on the end of a bench near the door, and now they grow as if they felt at home.

C. caudatum is a choice variety and should be in every collection; it will always be a favorite.

Alfred J. Lawrence.

Phaius grandifolius

At the present time, March 24, we have some fine large clumps of *Phaius grandifolius* in bloom. These plants were collected by the writer in the mountains of Jamaica over a dozen years ago and blossom annually about this time. The plant is not a native of Jamaica but was introduced there many years ago and is naturalized in many parts of the island now.

I remember well my first introduction to this plant when collecting in the mountains along with an English missionary, Mr. Griffiths, who was a great lover of orchids, and knew the homes of most of the genera and species indigenous to the island. The *Phaius* grew most luxuriantly in a field which was once part of a sugar plantation. The soil of this neglected field was a strong, rich, yellow, porous loam. The plants were in full blossom at the time and their flowering stems attained a height of about four feet and a half, each stem carrying a great number of flowers. Although the flowers were not as showy or as bright as some other orchids, yet they were produced so plentifully and grew so luxuriantly amongst the ferns and grasses which made a fine setting for them that it was a sight that impressed itself very strongly on my memory and since that time I have an affectionate liking for this plant.

It is an evergreen terrestrial orchid which has been cultivated in gardens for over a hundred years. Since it was introduced into cultivation it has had many names, and some old gardeners still hold on to some of the old names. It is hard to give up an old name when it has been once thoroughly impressed on the memory. It was known at one time or another by the following names: *Phajus Tankervillei*, *Bletia Tankervillea*, *Limodorum Tankervillea* and *Pachne spectabilis*. This gives an excellent example of how difficult it is for gardeners to keep track of names when botanists change their minds so frequently or are careless in their work and place the plant in the wrong genus.

This *phaius* blooms during the late winter and early spring months and if kept, while in blossom, in not too hot a house its flowers will last in good condition for several weeks. It has one splendid quality which many orchids are deficient in, and that is its long and stout flower stems and although its flowers are not as showy as cattleyas yet they have a charm of their own. I am pleased that in many places they are becoming favorites and being sought after.

The flowers which are of a good size are produced in long erect racemes. The sepals and petals are white on the outer surface and of a chocolate brown within. The lip or labellum white at the apex and the throat yellow, veined with crimson. The flowers last a long time when cut and make a good flower for florists' use. Their principal qualifications for a good florists' flower are their fine long stems, good keeping qualities, cheapness and ease of culture.

After the plants have flowered and have begun to show signs of new growth then it is time to repot. We repot our plants about every second year. When the plants are turned out of their pots take a sharp stick and pick away a large portion of the old soil. Use well drained and thoroughly clean pots and if the plants are in good health give them one size larger than they were in before. A compost of fibery loam, leaf-mould and rotten cow manure suits them well. Spread the fleshy roots out well in the pots and see that they are not bunched up together, packing the soil moderately firm about them. Until the roots take hold of the fresh soil water sparingly, but syringe frequently and keep

moist atmosphere; this will induce strong healthy growth which is the forerunner of a good supply of flowers. As they fill the pots with roots occasional watering of liquid manure is beneficial. A temperature of 55 degrees to 60 degrees suits them. As the plants are terrestrial and evergreen it is not advisable to dry them off at resting time. If they require a rest it is best given by putting them in a cooler place and keeping them slightly drier.

There are many more species belonging to this genus, and there are also many fine hybrids which have been raised of late years but these are too expensive for general use and hence the reason for recommending this old fashioned orchid which is so easily grown and flowers so freely.

Robert Cameron

British Horticulture.

GROWING FOR MARKET

In a paper which was recently read before the members of the Addlestone Gardeners' Society some interesting facts were given to show the progress made in commercial horticulture in this country. The total area under orchards in 1904 was 243,008 acres, and small fruits 77,947 acres. The former has increased in 63.9 per cent. in 31 years. Fruit growing has in many places been substituted for corn crops, which are no longer profitable owing to the heavy cheap foreign supplies. Two tendencies are observable in the modern development of market growing, and these are the cheapening methods of cultivation and the increase in the variety of crops grown. Amongst the later changes touched upon were experiments which are being made in the utilization of the motor service for conveying produce to London, and a new departure which is being made in the Evesham district in Worcestershire to produce early vegetables. Hitherto this branch has been chiefly in the hands of the French growers, who by the use of frames and bell glasses cultivate quantities of lettuce, radishes, asparagus, cauliflower, etc., for the British markets. A French grower has been conducting operations in the Evesham district, and he has already demonstrated that it is possible to produce as good crops as those cultivated in the neighborhood of Paris.

IRISH HORTICULTURE

F. W. Moore, Director of the Royal Botanic Gardens, Glasnevin, has lately published some interesting facts relating to the progress made in Irish horticulture in recent years. He considers that there has been a distinct advance in the cultural standard of the private establishments, whilst the same satisfactory movement has characterized various branches of commercial horticulture. Instead of being dependent on English sources for supplies, the Irish nurserymen have established a world-wide trade. The Irish seed merchants now secure large contracts outside the country. "Roses, tulips, narcissi, herbaceous plants, anemones and dahlias," Mr. Moore states, "are now grown better in Ireland than anywhere else, and our Irish specialists are kept busy supplying orders for these classes of plants for almost every place outside Ireland, where the climate permits such specialties to be grown. Holland even is a large customer for our own specialties." The fame of the Irish nurserymen is now well established, for it

is to the "Emerald Isle" we look for some of the leading novelties at the summer exhibition of the National Rose Society. Fruit growing is another branch in which satisfactory strides have been made. Under the auspices of the Department of Agriculture over 200 acres of young orchards have been planted. Experts are engaged in giving practical instruction in various districts, to provide trained men.

AN IMPORTANT WORK

Professor G. S. Boulger, F. L. S., a noted writer on botanical subjects, is publishing in monthly parts, through Messrs. Cassell & Co., his famous work on "Familiar Trees," illustrated by photo-micrographs of each wood, and a series of water-color drawings. Some years ago Professor Boulger read a paper at the Surveyors' Institute on "The scientific study of timber," and this was to some extent the foundation of his great work on wood. His real interest in trees, however, began in 1876, when some students in his natural history class at the Royal Agricultural College at Cirencester entered for the forestry examination of the Highland and Agricultural Society. At their request the Professor gave what was undoubtedly the first attempt at a complete course of lectures on forestry in the country. This led to his contributing to the Journal of Forestry which was started about that time. In that journal Professor Boulger published a series of papers on "Cultural First Principles," which fully dealt with the physiology of trees, and he followed this by a series intended partly for artists on "The Beauty of British Trees." As an indication of the painstaking character of Professor Boulger's work it may be mentioned that his works on wood and "Familiar Trees" each represented three years' hard work.

A DUCAL DOMAIN

One of the most delightful estates to be seen in the sylvan surroundings of Surrey is that of the Duke of Connaught, at Bagshot Park. The extensive grounds are noted for the magnificence of the trees and flowering shrubs. The place is also full of historic interest, for here the visitor is shown a remarkable specimen of *Abies firma*, planted by the late Emperor Frederick of Germany in 1880. In the same year the late Queen Victoria planted an *Abies pinsapo*. Five years later Prince Leopold of Prussia planted a *Tsuga Menziesii*, and the Duchess of Connaught a similar tree. In the gardens rhododendrons and azaleas are special features. Some of the former are 33 feet through, and they flourish most luxuriantly owing to the peaty nature of the soil. *Kalmias* are another leading attraction. *Kalmia latifolia* often grows to the height of 18 feet. The varieties vary in color from nearly white to deep pink. Leading to the orangery are three distinct avenues. One is called the rhododendron walk, with plants from 5 to 12 feet high. One of the finest varieties is *Rosslyana*, which flowers in March, with bright scarlet blooms. Another avenue is lined on either side with *Azalea pontica* in variety, growing more than five feet high, and of a very large circumference, whilst the third has yews on both sides. On the walls of the orangery, *Wistaria alba*, flowers luxuriously in summer. On the mansion there are grown *jasminum*, *pyracantha*, *escallonia*, variegated ivies, and *Crimson Rambler* roses.

W. H. Adsett.

Buddleias

See colored supplement, issue of March 24, 1906.

The Buddleias are valuable flowering shrubs, hardy in English gardens, and now, thanks in a great measure to the initiative of Messrs. James Veitch & Sons, several new sorts have been added to our collections and doubtless will soon be widely grown where hardy flowering trees and shrubs are valued.

The commonest of the buddleias is *B. globosa* (the orange Ball Tree). It derives its popular name from the curious appearance of its flower-heads. This favorite shrub is a native of Chili; in English gardens, particularly those of the south and southwest, it grows freely and in time attains a large size. A large plant in full bloom is very handsome. It is of rapid growth and even if cut down by frost in winter will invariably grow freely again the next year. *Buddleia variabilis* is also a valuable shrub, although at present not so widely grown as *B. globosa*. It is a native of China and was found by a French missionary, who sent seeds to France in 1893. From these seeds plants were raised that flowered the following year. Dr. Henry has found it growing in Central China. *Buddleia variabilis* was thus described in *The Botanical Magazine*, August, 1898: "This plant is a native of the mountains of Ichang and adjacent provinces of China. It is a large shrub, 8 to 10 feet or more high, very variable in foliage and with flowers densely crowded in globose heads peduncled in the axils of the uppermost leaves, and which vary in color from pink to pale lilac with an orange throat." It is a vigorous plant and flowers freely. In spring it grows freely from the old wood and during the summer makes growths 4 feet to 5 feet long. It is cut back more or less each year, but this is as might be expected, for it is of a semi-herbaceous character and grows until late autumn.

Buddleia variabilis Veitchiana is a handsome plant and superior to the type. It has received a first-class certificate from the Royal Horticulture Society. *Veitchiana* is more robust than *variabilis*, and bears larger panicles and flowers. The color of the latter is also brighter, being deep lilac or violet-mauve with orange-colored centre. The variety *Veitchiana* is one of the many good plants we owe to the collector, Mr. E. H. Wilson, sent out to China by Messrs. James Veitch & Sons. Those who have grown *Buddleia variabilis* should certainly not be without the variety *Veitchiana*. One grower writing of it says: "In the spring I was given a tiny plant of the variety *Veitchiana* about 6 inches in height. This was planted out in the garden and now has shoots 7 feet in length, while it has been flowering freely for the last fortnight. The bloom racemes at more than 12 inches long, but I have seen some on larger bushes that exceeded 2 feet in length."

Buddleia variabilis magnifica is considered by some to be even finer than *B. v. Veitchiana*. Others, however, prefer the latter. *B. V. magnifica* is more robust than *Veitchiana*; it has larger flowers,

which are some shades deeper in color than those of *Veitchiana*. This buddleia has received a first class certificate from the Royal Horticultural Society. It was generally admired when exhibited by Messrs. James Veitch & Sons, and was regarded as a promising new shrub.

Buddleia Colvillei is the most beautiful of all the buddleias, but unfortunately it is not hardy when planted in the open garden. It needs the shelter of a wall in this country to enable it to be grown satisfactorily. Even then it is all the better for some slight protection during severe weather. Mr. James Veitch describes it as a native of the Sikkim Himalaya where, at an altitude of 9000 to 12,000 feet, it forms a large erect shrub or small tree 10 to 12 feet high. The campanulate flowers, which are produced in great numbers in long terminal panicles, are bright rose-pink shaded with red.

H. H. THOMAS.

Moving Large Evergreens

Few men have had so much experience with the planting and transplanting of evergreens during the past few years as Arthur Griffin, superintendent of the E. T. Gerry estate at Newport. Dozens of immense specimens were moved long distances last winter and the winter before and, notwithstanding the commonly entertained idea that it is a risky business to move evergreens at that time of the year, not one of those moved has succumbed; on the contrary all have made good growth of root and branch. On removing some of the medium-sized trees again last fall, in order to make a slight rearrangement, Mr. Griffin was exceedingly surprised at the growth the roots of these trees had made.

These are facts worthy of the consideration of any one contemplating moving large spruce trees—trees that would change completely the appearance of a place. It is well-nigh impossible to move such large specimens in the spring, whereas if the work is done in frosty weather the only conditions absolutely necessary are money and the presence of a careful overseer. Many disappointments result from attempts at moving large trees of any kind in the spring and this is especially true of evergreens because very often it is found that their roots help but little in holding together the ball of earth required in moving, and no matter how much care is exercised in binding this ball very often a great part of it is lost before the desired destination is reached. Again, the moving of many trees of large size in the busy spring or early summer is attended with great inconveniences, and occasionally the work, for obvious reasons, is so hurried that these conditions in themselves contribute somewhat to the failures when failures occur.

When moving trees in winter it may be better to take a larger ball than would be thought necessary at any other time, but on account of the ease with which this extra large ball may be handled when frozen the increased size will not add proportionately to the cost.

Easter
greeting

Spring has come. We see it in the bursting buds and blooming crocuses, we hear it in the song of robin and blue bird and it thrills us with longings for the outdoor life and the invigorating breath of the garden and the wildwood. Dull impulses are stirred to fresh life and the wonderful regeneration going on all around us inspires us with living purpose. How detestable the selfishness and stupid follies of every day experience appear in the wholesome light of the spring awakening; how the burdens of material existence lighten; how buoyantly one assumes fresh responsibilities; how hopeful looks the future! May this glorious Easter season bring happiness and prosperity in overflowing abundance is HORTICULTURE's sincere wish for every reader of this our second Easter number.

For the
Easter growers

Agreeably to custom, this week's issue of HORTICULTURE is dedicated to the glorious spring festival of flowers and the great industry which plays so important a part in the appropriate celebration of the day. The greenhouses now so radiant with gorgeous color, the reward of many months of unremitting toil and anxiety, will in a few days be divested of all their glory and their fragrant contents will have gone out into the homes of rich and poor, of joy and of sadness, carrying their sweet message of the spring time, of new hope and inspiration. We believe with the speaker at the rose banquet that flower culture is the most honorable and elevating occupation on the face of the earth and it is our best wish for the Easter plant and flower growers that they may have willing buyers for everything they produce and ample returns for their investment and labor.

The advantages
of visiting

Field days, so called, are rightly regarded in some of our florists' organizations as among their most instructive and enjoyable functions. The name, itself, is somewhat of a misnomer as applied to a greenhouse visit but the visiting habit is a good trait for either a society or an individual to acquire. It combines the advantages of the lecture and the

exhibition, the two universally recognized means of imparting instruction and stupid, indeed, must he be who cannot learn something to his own advantage on these excursions, not to mention the recreation to be derived from the outing and the friendly intercourse of one's fellows. The worker who seldom sees any place but his own, who imagines he cannot spare the time to participate in these social affairs, is his own enemy for, in the long run, he will surely find himself left behind, distanced by his more enterprising contemporaries, and a mere nonentity outside of his own conceit.

The indispensable
wholesale florist

In commercial floriculture the ultimate object has been only half accomplished when the flower has been produced. It matters little how well grown the stock may be if it is not also well sold. If it is to go to waste in the storehouse or be sacrificed at a fraction of its value to the street fakir all the work of its production has gone for naught. As a certain philosophical wholesale dealer is wont to say, "We've accomplished little or nothing until the flower is transferred from the ice-chest to the ledger or cash book." Our advertising pages in this issue are well patronized by the men who are engaged in the indispensable work of transferring the great Easter product to the ledger or cash book. The business of the wholesale florist has grown within a few years to enormous size and importance. Its peculiar requirements have brought to the surface a class of shrewd business men, able, industrious and enterprising, well fitted to supplement the growers' cultural abilities by developing and maintaining a remunerative market for their product. They speak for themselves in our advertising pages. We hope our readers will favor them with their patronage for everything needed in the Easter material they offer. They are handling today the cut of the best growers by an overwhelming majority and can "make good."

Mahomet
goes to the
mountain

The "Better Farming Special" train is creating an unprecedented sensation as it proceeds on its route through the rural sections of New England. The cars are fitted up with exhibits bearing upon modern husbandry and agricultural methods and appliances and lectures are given at each town, where the train stops for an hour or so. Nothing that has happened within the experience of the present generation has ever aroused the interest of the farmers as this clever idea of bringing to their doors the demonstration in a practical way of what the experiment stations have investigated and proven in the years since their establishment. The accumulated knowledge of the agricultural colleges derived from scientific study and experiment is now in a fair way to reach and benefit those for whose elevation and enlightenment these institutions were founded but who with characteristic rural perversity or skepticism have never been disposed to learn much from the Bulletins and the "new-fangled" methods therein set forth. "Mahomet called the hill to come to him, again and again; and when the hill stood still he was never a whit abashed, but said, 'If the hill will not come to Mahomet, Mahomet will go to the hill.'"

THE COMING OF THE DAFFODILS.

(By Alfred Austin, Poet Laureate of England.)

"Awake, awake! for the springtime's sake,
March daffodils, too long dreaming!

The lark is high in the spacious sky,
And the celandine stars are gleaming.

The gorse is ablaze, and the woodland sprays
Are as crimson as August heather,

The buds they unfurl, and mavis and merle
Are singing duets together.

"The rivulets run, first one by one,
Then meet in the swirling river,
And in out-peeping roots the sun-god shoots

The shafts of his golden quiver.
The thrush never stops in the hazel copse,

Till with music the world seems ringing,
And the milkmaid hale, as she swings her pail,

Comes out from the dairy singing.
"The madcap lambs round their steadier dams

Are skipping as, one time, they did;
And, proud of the cheat, will the cuckoo repeat
Soon the tale of the nest invaded.

The swain and his sweet in the love-lanes meet,
And fondle and face each other,
Till he folds her charms in his world-wide arms,

With kisses that blind and smother."
Then the daffodils came, aflame,

aflame,
In orchard, and garth, and cover;
And out April leapt, and first smiled, then wept,

And longed for her Mayday lover.
—From the Independent.

OLD FOGIES.

Editor HORTICULTURE:

Dear Sir—Permit me to congratulate you on having at least one live personage on your staff of contributors who can discern a possible humbug when he sees it, and prescribe in befitting language measures calculated to undo, ere they get too bold, excessive enthusiasm on the part of those responsible for same; thus rendering valuable services to the,—I trust,—fast increasing numbers of the readers of your journal. This gentleman is endowed with argumentative faculties of a convincing nature, that is evidently begot from sound practical experience and observation. I simply wish to add my humble indorsement to the sentiments expressed and so well put by your correspondent, R. T. McGorum, in the last issue of your paper regarding the so-called "new fangled, mechanical watering." I honestly believe that this scheme is outside the pale of serious consideration as far as practical working is concerned under glass.

Doubtless we may be considered fit subject to come under the headline caption,—but time will tell. It cannot be said, however, that we are cowards, inasmuch as we dare to express our convictions.

I for one shall retire from the field of contrary opinion, as gracefully as you please, hat in hand, with unalloyed reverence for the victor, should future results prove the opposite to our way of thinking. K. FINLAYSON.

MORE ABOUT MECHANICAL WATERING.

Answering criticism of Robert T. McGorum as published in HORTICULTURE of March 24th, page 360.

Mr. McGorum starts his arguments with a poem which probably originated with one of his ancestors when the old can was in its prime. Poetry may be all right in its place, but I cannot see what it has to do with mechanical watering. Mr. Mc. says that the readers of HORTICULTURE are no wiser after reading my remarks than before. I wish to say that none of us are apt to grow much wiser by a few remarks on paper which can only be suggestive of what is possible unless we take advantage and make use of what is in our reach. As far as Mr. Mc. getting insight into mechanical watering I would advise that he give it a trial, but am afraid that owing to the fact that he has used the watering can so long his set ideas in this direction would not allow his seeing its advantages, his brain is so full of old theories that it will not absorb new ideas; it is like a sponge full of water—you can pour water all over it and none will soak in.

Then he goes off somewhere and has a dream about dry spots and red spiders; these are also some of the impressions time has printed into his brain, otherwise he would not dream about them. "Wake up," Grandpa McGorum, rub your eyes so you may see clearly that with mechanical watering there is no need of dry spots or red spider.

He mentions that a mechanical watering system was used in an adjoining town of his many years ago, and believes that the concern is now out of business. What kind of a system was it? There are different ways of going about things. Does he mean to say, that the mechanical watering put them out? I do not claim that the mechanical watering is a panacea for all business ills, that it will make an expert grower of a ditch digger. But if used aright it will soften preconceived opinions, and make many converts from Mr. McGorum's old-time methods.

He speaks about cement benches, saying they are being discarded. Let me say, as cement is superseding wood in other building operations so it will supersede the wooden bench and many other parts of greenhouse where wood is now used. I say again mechanical watering will supersede the can and hose for greenhouse watering as sure as the hose has superseded the can because it practically does away with the watering labor. It will do better work than a man can do with the hose and will grow more uniform crops. He will probably ask what has he to prove the above assertions. In answer I will suggest as "the proof of the pudding is the eating thereof," that every one interested try mechanical watering to prove its superiority to his own satisfaction, as I have proved it to mine, and others, where the system is installed have proved it to theirs.

In conclusion I might offer the following, written to another party, by W. B. Davis, a leading western grower:

While all have heard of watering machines, they are by most grow-

deemed an impossibility, and those who have dared to experiment in that direction have received little encouragement. Nevertheless, the watering machine is now an assured success. W. B. Davis & Co., of Aurora, Ill., have taken the lead by putting the system in their entire establishment of 50,000 square feet, this probably being the first greenhouse in the world watered exclusively by machines. The watering now done perfectly in one hour formerly required nine hours.

LOUIS WITTBOLD.

A FEW MORE WORDS ABOUT MECHANICAL WATERING.

Mr. Wittbold would have us believe that the idea of mechanical watering has for its origin the rising and progressive young men of the present day. Mechanical watering, like several other young ideas, has gray hairs.

Forty years ago, at Sir W. Armstrong's place, in the hills above Rothbury, Northumberland, England, was an orchard house. I cannot give the dimensions, as I was young at the time, but the plants under cultivation were the ordinary subjects of an orchard house—apples, pears, plums, cherries, nectarines, peaches, apricots, etc. They were all nice, shapely trees, say 8 feet high by 5 feet through. They were all established in slate tubs, as near as I can recollect, about 2 feet square or more. They were all on an arrangement of castors by which they could be turned or moved with the slightest effort, and a pipe ran over the whole of the rows of tubs, whereby they could be watered. There was also an arrangement for spraying the whole house. I made this trip with my father and Mr. James Gray, of King's Road, Chelsea, London, and remember yet lots of the conversation between them on the 16-mile drive home. Mr. James Gray was one of the pioneers in greenhouse construction and hot water heating. I also remember at the above place, the natural fernery, at that time one of the finest in Britain. It was formed by covering a mountain "burn" with glass, and the cascades, pools, grottos, etc., were the home of luxuriant specimens of ferns that could not attain such vigor under less favorable conditions. I allude principally to the filmy section, such as *Todeas pellucida* and *superba*, *Hymenophyllum*, etc. The tree ferns, too, were grand. Almost everything on this place had to be under glass, as it was perched away up on the bleak side of the Cheviot Hills, but the magnificent scenery amply repaid for the inconveniences of the situation.

I ought to state, in conclusion, that the "mechanical arrangement" was not thought much of by the gardener in charge, whose name, I am sorry to say, I have forgotten.

CHARLES INGRAM.

PERSONAL.

Wm. Hagemann, New York, has gone to Bermuda on a business trip.

Julius Roehrs of Rutherford, N. J., returned on March 31 per steamship America from his European trip.

Joseph A. Manda of South Orange, N. J., who has been very sick for some weeks is now out of the hospital, and is rapidly regaining lost strength.

NEWS OF THE CLUBS AND SOCIETIES.

PHILADELPHIA SPRING SHOW.

In my hurried notes last week I omitted many important exhibits that deserved noticing. In the class for four azaleas in 10 inch pots John McCleary was first with a nice lot. There were some fine plants of Gloire de Lorraine begonia grown by Mr. Clement E. Newbold's gardener, Samuel Batchelor, which was awarded first premium. William K. Harris had a group of rhododendrons which carried off the first, so also had John McCleary gardener for Mrs. Walker. Marguerites in 12-inch pots were magnificent specimens, William Robertson securing a well-merited first for same. Same exhibitor also took first for specimen acacia and for a specimen plant of zonal pelargonium. Daniel Neeley, gardener for Craige Lippincott was first for a well-grown batch of cyclamens.

There was an exhibit of the *Arabis alpina flore-pleno*—but the "pleno" seemed to be missing. First for varieties of English primrose went to Arthur Malton, Jr., gardener to Edgar T. Scott. Three pans in three distinct varieties of wallflowers exhibited by William Robertson took first and were very much admired. A pan of "London Pride," *Saxifraga umbrosa*, by same exhibitor brought pleasant memories to many.

In pot roses William Robertson swept all before him. His Baby Rambler, Killarney and Frau Karl Druschki all showed evidences of good culture. A thalictrum exhibited by John McCleary showed conclusively what may be done with many similar plants. The Julius Roehrs Co. had a very chaste collection of orchids. Taking the show all together it was very instructive and merited better patronage.

EDWIN LONSDALE.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Department of Plant Registration.

Ant. C. Zvolanek, Bound Brook, N. J., submits for registration the following sweet peas:

Mrs. Wm. Sim, seedling from Christmas White X Mr. Wild (exhibited in Boston as No. 81); color, salmon-orange.

Mrs. T. J. Dolansky, seedling from Enchantress (exhibited in Boston as No. 96); color, silvery pink.

Samuel J. Trepass, Glen Cove, L. I., N. Y., submits for registration the following carnations:

Maxwilton, seedling of 1903 (Mrs. Thos. W. Lawson X Enchantress); flower, white, 3 1/2 inches across, slightly fringed; stem, stiff, 26 inches long; very free with good calyx.

Caroline Whitney, seedling of 1905 (Lady Bountiful X Enchantress); flowers, white, fringed, 3 1/2 inches in diameter; stem, 18 to 20 inches; wiry, good calyx, also good grower.

WM. J. STEWART, Secretary.

COLUMBUS FLORISTS' CLUB.

The last regular meeting for the month of March was held on Tuesday evening the 27th, with President Stevens in the chair. It was the largest gathering of our members seen in a long time, some forty being present. The matter of putting up, and sending out to the various schools, the penny packets of flower and vegetable seeds for the school gardens was continued. Many inquiries have been received from various cities throughout the state for seeds for the children—this movement is extending all over Ohio. Our club is very much pleased that the S. A. F. meeting this summer is to be at Dayton; the attendance from here will be large, and a bowling club is already taking form. After the meeting there was a very interesting discussion on roses in which all took part. The meeting was held at the spacious offices of the Fifth Avenue Floral Company, as the club finding its old quarters in Iroquois Hall very inconvenient in many ways has given them up, and as yet has not decided where to permanently locate. The meeting was thoroughly enjoyed by all, and when the members departed at a very late hour after having enjoyed to the full, the good things provided by the hosts, the many benefits provided through our organization were fully realized.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The next regular meeting of the club will be held at Horticultural Hall, Boston, on April 17. J. A. Pettigrew will lecture on "Embellishment of Streets and Waysides."

Tickets are now in the hands of many members for the club banquet on April 25, and are selling fast. The attendance promises to be a record-breaking one. Applications already on hand assure a membership of over 300 on April 17, and the 400 goal will be reached ere the end of the year.

W. N. CRAIG, Sec.

PITTSBURG AND ALLEGHENY FLORISTS' AND GARDENERS' CLUB.

"Easter Plants and Flowers" was the topic for discussion at the club meeting, Tuesday evening, April 3, and it was illustrated by a liberal display of flowers and plants. After routine business, the election of two members and a shaking up of delinquent members, the meeting took up the flowers and plants in detail.

David Fraser, gardener for H. C. Frick, showed azaleas, lily of the valley, begonias and *Hydrangea rosea*. This hydrangea, while by no means new, is not commonly grown, and it drew much attention, its pink blooms showing to advantage under artificial light.

H. L. Blind and Bros. showed hydrangea in bloom in a large tub from last spring cutting, forcing started in January, genistas in bloom, and Crimson Rambler roses. A comparison of the merits of the Crimson Rambler and Philadelphia Rambler brought on the fact that while winter before last both Ramblers withstood the severe weather unhurt, yet this last winter the mild weather of January had started the buds alike on both, the Philadelphia being killed to the ground, while the Crimson was unhurt.

Blind Bros. also showed *Spiraea Gladstone*, lilacs and a fine lily. The talk on lilies developed that the bulbs had proven very poor this season, some growers estimating that they had lost over one-half of their bulbs, those coming from Japan proving the worst.

The Shenley Park Greenhouses showed cinerarias, Veitch's strain, in pots, also a collection of the blooms on cardboard, with short stems extending through the cardboard into wet moss in a shallow box, all in such shape that it was passed from one

GARDENERS' AND FLORISTS' CLUB OF BOSTON VISITING W. W. EDGAR CO.

PART OF SPRING EXHIBITION OF MASSACHUSETTS HORTICULTURAL SOCIETY.

member to another for critical inspection. Also daffodils in variety, well-grown Henry Irving looking particularly well; jonquils and a pot of *Nicotiana glauca* in bloom; tulips in variety, of which *Ophir d'Or* seemed the best yellow, *Prince of Austria*, the best scarlet, and *Albion* or *White Hawk*, the best white.

The Park showed hyacinths in great variety. *La Grandesse* was perhaps the best white, and *Prince of Saxony* the worst of any color shown. *Norma* and *Goethe* were fine in the light colors. *Cavaignac* was admired by some.

For the next meeting, "Bedding Plants and Palms" will be the subject.

H. P. JOSLIN.

CLUB AND SOCIETY NOTES.

The regular monthly meeting of the Florists' Association of Indianapolis was held April 3. Final arrangements were made for the Spring Show, April 9.

The Messrs. Farquhar of Boston entertained the members of the New Bedford Horticultural Society with an illustrated lecture on "The Bulb Growing Industry of Holland," on the evening of March 27.

Dennis T. Connor, the Philadelphia representative of the Lord & Burnham Co., will give an address on "Greenhouse Building: the Latest Improvements," at the May meeting of the Florists' Club of Philadelphia, Tuesday evening, May 1.

The members of the Gardeners' and Florists' Club of Boston, to the number of about sixty, had a field day on Saturday, March 31, visiting the

greenhouses of W. W. Edgar Co. and Pierce Bros., where they inspected with much pleasure the Easter crops, and were sumptuously entertained.

Robert Craig addressed the Florists' Club of Philadelphia on Easter plants on the 3rd inst. He traced the progress of this industry for the past 20 years and pointed out the newest good things that should be used today, a very able and interesting paper, which will be found in its proper place in our columns.

Recent visitors in Philadelphia: W. W. Edgar, Waverly, Mass.; Mr. and Mrs. R. J. Halliday, Baltimore, Md.; Mr. and Mrs. Lloyd G. Blick, Norfolk, Va.

ROSE GROWING FOR CUT FLOWERS.

Paper read before the American Rose Society by J. J. Curran.

Mr. President and Gentlemen: When I undertook to read a paper before your society on this subject, I had little thought that after my researches into the newer methods I should find so little that was really new. It is an old saying, and a true one, that there is nothing new under the sun, and I am somewhat inclined now, to be of that opinion also, for just as I would be congratulating myself on having found or heard of something new, along comes one of the old boys and tells me that this same method has been followed in years gone by. After a few of these disappointments I made up my mind to give you such facts as I have gathered in my researches. If they contain anything new, so much the better; if they are old, they may bring back pleasant recollections to some of us, and renew the scenes of our youthful battles.

When starting to review the newer phases of rose culture it will be appropriate to start with the beginning of the rose plant. By this I do not mean the cutting or scion which, of course, is no new plant, but simply a perpetuation of a branch of the original plant. I mean the product of the hybridist's art. The skill, care and untiring energy which these gentlemen have brought to bear on this branch of the business has been of infinite benefit to the craft, inasmuch as we now have a larger field from which to choose our varieties, and I may also add that we have finer and more suit-

GROUP OF HARD-WOODED CUT FLOWERING PLANTS AT SPRING EXHIBITION OF MASSACHUSETTS HORTICULTURAL SOCIETY.

able varieties to choose from, because these varieties have been raised having in view their suitability for forcing purposes.

These gentlemen deserve the thanks of all growers, and among a host of other workers our worthy president and Mr. E. G. Hill, who have recently given us two such valuable varieties as Wellesley and Richmond, deserve our especial thanks. Devoting very little time to this branch of the business, I am unable to give you any new pointers, and if our hybridists have learned anything new they are holding it up for future use, or perhaps they are only exercising that Scotch caution recommended by the immortal Burns:

"Aye free aff hand your story tell,
When wi' a bosom crony
But still keep something to yoursel',
Ye scarcely tell to ony."

After having secured new varieties of merit, the work of the ordinary grower begins. In order to produce stock in quantity and quality from these new varieties is the condition now confronting us, so that we may be remunerated for our skill and labor.

Profiting by the mistakes made in bygone years, our disseminators do not now force the life and constitution out of the variety in order to secure large quantities of young stock for market, but, rather grow it on a year or two longer, studying its character and peculiarities and paying especial regard to maintaining and improving its constitution, so that now when a variety is disseminated we have every confidence that it will respond to ordinary cultural methods, when due regard is taken of any peculiar habits or traits it may possess.

The time-honored method of perpetuating varieties by cuttings is still almost universally in practice, and when soil is suitable, some varieties of stock so propagated succeed well. This subject has called for a good deal of experiment and discussion of late years, and I think it is conceded by most growers that where the soil is of a loamy nature that most varieties at present in cultivation under glass succeed well, if not better, than grafted stock. Where the soil is of a poor quality, requiring large supplies of liquid or other food, it stands to reason that plants grafted on Manetti or other stocks possessing an abundance of fine feeding roots can absorb and use it to more advantage than own root stock.

Propagating by grafting being practically new in this country as applied to stock under glass, there is a better field for advance and improvement, both as regards the variety and class of stock to be used, the style of graft, quality, size of scion and after treatment.

Within the past few years, I have seen many improvements in this method of propagation, because instead of being only copyists we are doing our own thinking, and when we have to think for ourselves, we are just as certain to improve as that the sun will rise in the east.

Most of the establishments which practice grafting in quantities are equipped with neat and sensible cases in which to care for the young stock until they are fit to be placed on the bench, and this I consider the most essential element to success. That grafted stock is being used more freely year by year is certain and this very fact proves that we are moving along the right lines but before we entirely drop our root stock, we should first satisfy ourselves by experiment that our soil and varieties are best adapted to grafted stock, as indiscriminate planting of grafted stock irrespective of quality of soil and other conditions may not always be a success.

The most suitable kind of a bench for rose culture has also been a much discussed question and this discussion has led to many real and economic improvements. There is a wide difference between the old lumber bench of twenty years ago, with the everlasting repairs which kept it company, and the neat and indestructible iron and tile benches of the present day. Even in the matter of solid benches for those who still have a favor for them there is a decided improvement. Bringing as we do our experience of the past, and our scientific knowledge regarding aeration and drainage of soil into our service, we are able to build benches better suited to the requirements of the stock.

In respect to planting we cannot say we have made any great advance in recent years, the same general principles applying as formerly. Some few years ago we imagined we were on the edge of discovering something new regarding watering, and the theory of sub-irrigation was given an impartial trial by many of our expert growers, only to be relegated after a time to "the realms of innocuous desuetude." Other schemes automatic and otherwise have been advanced and tried but so far as the rose is concerned we have to depend on the accurate judgment of the man with the quick eye and the deft hand for our success.

Our studies in plant and soil chemistry are every year bringing us nearer perfection in cultural methods, particularly as regards the quality of food required by the plant in confinement under our care where we have to attend to their every want and supply it at the proper time. It is encouraging and a gratifying augury to find so many of

our young brethren devoting themselves to the attainment of knowledge on a scientific basis. They are sure of their reward.

In our battles with our insect and parasitic enemies we have been ably supported and advised by some of the best entomologists and professors of horticulture who have supplied us with the life histories of nearly all insects and parasites injurious to our crops and the most effective means of exterminating them or keeping them in check. Our thanks are especially due to Prof. Byron D. Hatstead for the much needed advice and information he has given us on these subjects.

During the past decade our most radical advancement has been in horticultural construction and heating systems as applied to the same. Not so many years ago when we thought of building we had ourselves to be architect and builder, plan and lay down our own heating system, and be general utility man. We have now professional architects vying with each other as to who will produce the most economic, shadeless and handsome buildings suited to our wants with heating systems and ventilating apparatus, which are simply perfection when compared to our buildings and appliances of twenty years ago. When we compare the handsome, lofty, almost shadeless and well ventilated structures of the present with the low walled, heavy raftered, hand ventilated building of twenty or twenty-five years ago we must wonder how it was possible for the growers of those days to produce such excellent stock as they did. We also have the advantages of high class educational trade papers, in the columns of which we can in a friendly way discuss questions pertaining to the profession, and which I consider can with justice, lay claim to the credit of aiding us very materially in our progress.

Last but not least we have this society which through the energetic efforts of its officers has done much to make the rose popular, to gather and disseminate knowledge as to cultural methods, control of pests, etc., and to foster that brotherly feeling amongst the craft, where friendly discussions of our many interests must of necessity be of the greatest importance, and lead to advancement. So that with the advanced methods and our past experience to guide us the knowledge science has placed at our command and the faculties we enjoy in improved construction, perfect ventilating machinery, excellent heating systems and our advanced scientific knowledge, the outlook for the rose grower is of a rosier hue than it has ever been in the history of American floriculture.

SOLUBLE FERTILIZERS.

Paper read before the American Rose Society, 23d March, 1906, at Boston,
By Dudley Malcolm Pray.

About three-quarters of a century ago a great deal of the mystery of chemistry was cleared away by the discovery that a certain chemical substance (urea) could be made in the chemist's laboratory. Up to that time it had been supposed that this and similar substances could be made in one way only, by obscure processes in the living animal. The fact that such substances could be made from dead things, as it were, and yet be an exact counterpart of those eliminated from living animals caused a profound revolution of thought. Since that time such progress has been made that today we all but make living things from inanimate matter by chemicals, if you will.

It seems to me that a similar office for horticulture has been performed by those who fifty years ago first brought plants to maturity without soil, by the so-called water culture. In this method, after the seed was sprouted, and when it had a few roots it was supported upright by a split cork or convenient holder over water into which its roots hung, which contained minute amounts of plant food in solution. In this way buckwheat, corn and oats were brought to maturity. This method of growing plants eliminates the soil, thus simplifying the whole question of essential and non-essential root-foods in plant life. The essentials are found to be seven elementary substances, nitrogen, phosphorus, potash, lime, chlorine, iron and sulphur, and the non-essentials are soda, magnesium and silica and many others. Of the essentials only nitrogen, potash, phosphorus and lime need concern us, as there is usually enough of chlorine, iron and sulphur in most soils. Lime is found in sufficient amounts in many soils, but is sometimes added to sweeten the soil, i. e., to correct acidity, which may be caused by excessive moisture or acid fertilizers. As a matter of fact, we are concerned mainly with the three remaining essentials of plant life, absorbed through the roots, nitrogen, phosphorus and potash, for these are needed in large amounts and must be supplied continuously to the plant. A fertilizer having these three ingredients is termed complete.

Not only have these facts been learned from water culture, but that also extremely small amounts of food, even two parts in one thousand, will abundantly sustain active life. To bear this out, we could mention orchids which are fed daily with very dilute solutions whenever watered, and occasionally with a complete soluble fertilizer called Cookson's formula from its originator. This chemical has demonstrated its value for years, and is commonly used one part in ten thousand parts of water. Note the extreme dilution.

The source of nitrogen blood, tankage, guano, all sorts of animal manures, and various commercial fertilizers are used. Soluble sources, nitrate of soda, liquid ammonia and ammonia salts, as ammonia sulphate, and phosphate. For rose culture, stable or cow manure is often used, and sometimes nitrate of soda, of

which we shall speak later. Green manuring is sometimes used.

For phosphates the animal manures are largely used, also bone, whose phosphate of lime is very slowly given up; in fact, bone-meal requires years to obtain its full value. Super-phosphates are much used out of doors, but not much under glass, and not being soluble are not adapted to use in watering. None of these above mentioned are soluble or at once available. In certain stages of plant life the energy of the plant seems directed into the channels of blossoms rather than foliage. At this time phosphates and potash are demanded much more than nitrogen. The chemical, phosphate of potash, has fifty per cent. phosphoric acid and thirty-three per cent. of potash, and dissolved in water. Such feeding should give the needed incentive for blooming, and support well the blooms.

For potash, we have the animal manures from which it can be obtained quite easily, and wood ashes. As chemicals, there are the sulphate, muriate and carbonate. These chemicals are used out of doors mostly, but in doors there are often serious objections to their use.

D. M. PRAY.

About a generation ago, commercial fertilizers came into use. They were more portable and durable than animal manures, and answer for farming. Composed of insoluble materials, as blood, ground or dissolved bone, tankage, and usually with some cheap soluble chemical of the list already mentioned. They are not very satisfactory for rose culture even outside. Their variable composition, insolubility for tank use, often harmful ingredients, and low food value render them undesirable for bench work. Averaging perhaps fifteen per cent. total plant foods, with three-quarters useless "filler," they yet mark a distinct step towards an ideal soluble fertilizer, and away from the old disagreeable manures.

Rose soil under glass is often mixed with bone and dung (with the latter's numerous living retine), and sometimes lime. But to grow large fine roses and many of them resort must be had to feeding, especially in the height of the season. While top-dressing can be done by hand, the use of the watering equipment to apply soluble food is of great advantage and fast coming into use. For this purpose manure tanks of wood or concrete are

much used, and the manure is dumped into the water, and generally strained before going into the water system. This simple method gets much of the potash out, but a great deal of the valuable nitrogen and the phosphates must stay behind, not being dissolved in water.

An important question to every grower using such tanks is: "How much plant food is there in my tank water?" A chemical analysis will be of some use, but such analyses must be made often. As ordinary stable manure may be considered to have ten pounds of nitrogen and potash each, and less than seven pounds of phosphate per ton, and so much labor is involved, the actual cost of this plant food is much greater than is suspected by the grower. While these figures are general, they give an idea of some value as to what may be expected. By poor treatment one-half the nitrogen may be lost, thus losing a third of the value of the whole. If no urine is present it has only half the value of one composed of both solid and liquid ingredients. Exposure may have leached much of the value of the manure away without the knowledge of the grower. To get one pound of plant food for one hundred pounds of manure put into the tank is almost beyond hope.

We wish to point out the great value of soluble fertilizers in tank water. Without repeated chemical analyses, next to nothing is known of the water except by the appearance of plants days afterwards, and even if everything goes swimmingly, it is doubtful if the same treatment could be duplicated. Even with chemical analyses the situation is only a little clearer, for liquid manure water is not available at once, and much depends upon the soil, the condition of which we are not always certain about. By the use of soluble fertilizers the amount of food applied to any one bench can be known to a dot. For example, we wish to water benches with one hundred gallons of water and two pounds of food. We put the food in a bucket, see that it is completely dissolved, then throw it into the tank. To save time and bother, we have made out a little cardboard schedule with parallel columns showing respectively depths in inches in the tank, gallons of water, and finally figures showing in pounds and ounces the proper amounts of plant foods to use for various purposes. Or soluble fertilizers may be used in conjunction with the usual manure water. A measuring stick with light scores made at convenient distances is useful in ascertaining the exact amount of liquid in the tank. If the tank has a dead space, so that liquid always remains here, a blank space should be on this measuring stick, and in this way too much fertilizer for the amount of water will not be added. The grower now knows exactly what he is doing, which is a rather new thing. We think that while many growers would like to use soluble fertilizer more or less, they do not know just how to begin with absolute safety. They must first have some clear idea of what they are now doing before they can expect to duplicate plant foods with an immediately available fertilizer. They should consult with chemists interested in soluble fertilizers who could materially assist

them. In this connection we think the Government and various experiment stations have done much, and their publications are of value to the rose grower.

A word about nitrate of soda. We often hear of too much being used, and consider that one pound in a hundred gallons is a very strong feed. We think that one pound in two hundred and fifty gallons, which is about one part in two thousand, will do well for a starter.

In the use of lime in tanks for sweetening, it is well to bear in mind that never more than two pounds per one hundred gallons will dissolve. If a creamy mixture of lime and water is desired, that is a different thing, and its composition depends largely on the character of the lime.

We have said that the ordinary commercial fertilizer is a step toward the ideal one, but it lacks soluble ingredients, and often has harmful ones, and has but small amounts of plant foods.

An ideal soluble fertilizer should be entirely soluble, entirely available, non-acid, pleasant to use, of proper balance, not expensive, and as concentrated with as little bulk as possible. Such are manufactured today, having sixty per cent. plant foods (the highest possible amount) with no injurious ingredients nor any useless ones. In short, we may consider these pretty nearly a perfect soluble fertilizer. As time goes on and we have more definite information concerning the immediate needs of plant life, we have no doubt but that the soluble fertilizer will be up to date. Owing to the lack of appreciation of their very high percentages of plant foods and their purity from cheap and often injurious ingredients, their price may appear high at first glance, but calculating their units of soluble plant food, they compare favorably in price, especially with so-called natural fertilizers.

After all is said and done, the bald fact remains that the only food that is of any use to the plant roots is a soluble fertilizer.

THE RETAILER'S PART IN THE INTRODUCTION OF NEW ROSES.

Before the American Rose Society at Boston.
By George Asmus, Chicago.

The writer is enthusiastic on any subject in floriculture, whereby the exchanging of ideas is possible; and with that view firmly established at a very early age became a member of our noble Society of American Florists and Ornamental Horticulturists. I have become affiliated with local florists' clubs, flower shows and two of the great offsprings of the S. A. F., namely the American Rose and Carnation Societies. With that same feeling pre-eminent I accepted the invitation to read this paper before this honorable body, to express the views I have upon this subject.

To handle my subject briefly and clearly I have reduced the retailer's part in the introduction of new roses into what I shall term eight reasons;

First.—He should become acquainted with as many new roses as possible.

Second.—He should acquaint himself with the flowering habits of the new roses.

Third.—He should display new varieties prominently in show windows and stores.

Fourth.—He should arrange with commission men or growers for regular supply of new varieties.

Fifth.—He should learn the parentage or source of new varieties.

Sixth.—He should interest himself in naming of new varieties.

Seventh.—He should devote part of his time to horticultural societies and local florists' clubs to relate experiences with new varieties.

Eighth.—He should be one of a set of judges, and his essays more frequent.

I will now endeavor to answer the first of above reasons why the retailer should become acquainted with new varieties. The American flower buyers are principally composed of the educated classes who are desirous of knowledge; more so when pertaining to anything new. I will cite one incident that occurred during my stay here at the recent American Carnation Society's meeting, one that struck me very forcibly. With several gentlemen I was visiting one of the prominent florists of this city, when a lady entered, evidently a customer, who had availed herself of the opportunity to visit the beautiful display of carnations staged in this same building by America's best growers. She had with her a bloom of a new carnation, and being deeply interested in it wanted to know more about the flower, but contrary to her expectations none of the clerical force were able to give her the desired information. Luckily one of our party overheard the conversation and delighted the lady with the knowledge she had troubled herself to secure. This led me to inquire how many of the sessions had the three florists in that particular store attended? I was surprised to hear that neither one had been to the horticultural hall at all; and was more surprised when asked by one of the clerks (who professed 15 years' experience) "What kind of a show have they got any way?" That to me who had traveled 1,000 miles, was a revelation! Had he availed himself of the opportunity to become better posted on new varieties by attending the meeting, he would have been able to creditably answer the lady's questions. Surely our art is one to be proud of, and this hall this evening ought to be packed with local retailers filled with ambition and pride in their calling. The press of the whole country is evidently awakening to the great desire of the public on anything pertaining to horticulture; and we are on the eve of a great and prosperous future. Therefore it behooves the retailer as the great medium, he who meets the buyer direct, to acquaint himself with the new roses and distribute that information truly and accurately to the trade.

My second reason is: Why the retailer should acquaint himself with the flowering habits of new roses. Because the flowering habits regulate the supply; and the supply very often the price. He would also know when to expect the largest cut, and thus be able to obtain blossoms in quantity for all occasions, as for instance, a regular purchaser of a certain variety intends to entertain, and wants to know if she can obtain her favorite roses for that date. The confidence of the person would be strengthened by immediate knowledge.

Regarding my third reason: Why the retailer should display prominent-

ly new varieties. This is very important, and bears more than ordinary interest to his business. As I said before, the public is constantly looking for something new, and it is a fact also that people who are undecided as to the nature of the article they intend to purchase are often attracted by a particularly fine vase of new roses or anything new in our line, thereby causing many sales that would not otherwise have been made. Therefore, if it is the good fortune of the retailer to have at his disposal the crop of some grower who has spent his time and skill, and has blessed floriculture with the fruits of his labor, the retailer should do his part, and I will venture to say that if he made a proper display and worded the information he is constantly besieged for, he would begin to understand why his business was so dull. I saw displayed by a prominent florist in a very large window a vase of Catherine Mermet, at that time being new, and to the right and left not quite so prominently, its two sports, Bride and Bridesmaid. Making inquiries about results, I found that by being advertised, many sales were made, owing to proper display. This goes to show that very often we have cooped up in our ice boxes novelties that should be continually before the public.

Reason the fourth. Why the retailer should arrange for a regular supply of new roses, particularly varieties he displays. This was brought to my personal attention during our flower show last fall, when as manager I was on the lookout for material that the press would use, if we were to expect help to promote our interests in the local papers. One of our growers had a new rose which he intended naming, and as he had had some unsatisfactory experience in the past owing to names given to roses he was very desirous of getting the right name for this particular variety, and finally decided upon naming it after the bride of one of Chicago's prominent business men. The press immediately took hold of this subject and gave it much prominence by displaying cuts of the rose and the lady it was named after, also mentioning the grower and publishing information given by him. Previous to this press talk a few retailers in our city had this same rose in stock in such quantities as were available; but reports did not show that there was a notable demand for it. Now, however, note the change! The statement of the manager of the establishment where the rose was grown was that from 30 to 40 telephone calls a day was a moderate estimate, to say nothing of the calls at the local retail stores by people wishing to know where the rose could be seen and purchased. Naturally there was a scarcity owing to the demand, also owing to the usual methods employed by the grower in securing all the wood available for cuttings as soon as he found out he had a winner. The retailer is very apt to think that the variety has been exterminated were it not for the glittering advertisements in the trade papers. I sometimes think there are growers who do not sleep nights but go prowling around with a lantern in their greenhouses looking for new cuttings; therefore the retailers had better arrange for a regular supply of new roses before advertising too

strongly. It would be well to state here the worth of new roses as an advertising medium for flower shows. This was brought home to me very forcibly at our show, where I established a bureau of information, clerks in charge being over-run with inquiries regarding the location of new varieties advertised.

As to reason five. Why the retailer should learn the parentage or source of new varieties. Because it pertains to his business. When talking with the trade the impression left by the knowledge of new varieties can not help but do good. Very often people are glad to receive such information and do not hesitate to tell others, and at the same time it adds to the prestige of the party giving the information. It is also a help in properly displaying new varieties and correctly informing the public. The choicest vase of roses can be given 100 per cent more publicity in the window by simple and truthful description.

Reason six. Why the retailer should interest himself in the naming of new varieties. The grower should deliberate very carefully before naming a new rose. While undoubtedly it is a great pleasure to name a rose after a dear friend or a member of one's own family it is not very often the practical way. For after all we are merchants who are fortunate to have one of the Creator's beauties to deal with. If flower buyers would rather purchase the Alice Roosevelt rose than the same rose named Uncle John or Uncle Bill, let us give them what they want and reap the benefit. It never hurt the beautiful carnation Peter Fisher originated when he named it after Boston's illustrious son's wife, Mrs. Thomas W. Lawson, and nothing could be more appropriate than the name American Beauty for that grand flower. When E. G. Hill changed the name of his beautiful red rose from Aetna to Richmond he knew there was something in a name. An incident comes to my mind during my visit to New York last month. While strolling along Fifth avenue I saw quite a throng of people stop and admire three vases of roses prominently displayed in a show case in front of one of New York's large flower stores. My curiosity being aroused I investigated and found the beautiful Richmond rose adorned with a small placard announcing same as the Mme. Sembrich, Uncle John as Mme. Eames; and still another rose, the variety of which I was ignorant of, as Mme. Melba. That being grand opera week I was informed by the exhibitor that they could insure the sale of many more roses by tricking the public. I myself do not approve of that scheme, far the reverse, and I did not hesitate to tell my informant so. But here was food for thought. If it was of so much value to name the rose Mme. Eames, or whatever the name might be, to increase the sales, why should not the retailer who meets the purchaser and knows the value of a name be consulted and his advice listened to?

Reason seven. Why he should devote part of his time to horticultural societies and local florists' clubs to relate experiences with new varieties. My answers to other reasons covers this somewhat. But the fact of the good derived from rubbing elbows with all branches of our business, was

brought home to me during a recent visit to Dayton, O. While taking lunch at the officers' club on the National Cash Register Co.'s grounds, where the heads of the different departments lunch and spend the noon hour, I noted that the greater purport of the conversation was upon their work. I was informed that some of the brightest ideas originate in that recreative hour. Thus it should be at our club meetings. The retail employer should see that his help belongs to local organizations, and there if anywhere, the rose grower is sure to bring his new variety. Discussions on the merits of the same might take place and the grower could get such information as he may need and wish. It wants the closer affiliation of the grower and retailer to help both in their business. It was at one of these meetings in our city that a Chicago grower displayed a vase of the Mme. Abel Chatenay in first class condition. The rose had been partly condemned by some of the retailers who had not seen it at its best. The rose so impressed one of our prominent retailers at that meeting, and he was so in-

GEORGE ASMUS

terested, that his purchases and the demand he caused no doubt was responsible for part of the great popularity of this rose in our city.

Reason eight. Why the retailer should be one of a set of judges and his essays more frequent. By so doing he would come in touch with the local dealer and get his ideas on his wants in the way of supplies for certain seasons and the colors mostly desired. It seems to me, also, that essays would be one of the ways his ideas could be ventilated. By making him one of a set of judges the commercial view of the new rose could be better had.

OBITUARY.

Henry E. Riedel, one of the old-time florists of New York City, died on Saturday, March 31.

William J. Livingston died at his home in Columbus, Ohio, on March 25. He was 75 years of age. Mr. Livingston was a brother of A. W. Livingston, who founded what is now The Livingston Seed Co. of that city.

EASTER PLANTS IN NEW YORK MARKET.

The Easter plant trade is practically over as far as the growers are concerned. Everything of importance has been sold and deliveries are about to begin. The staples of other years are the staples of this year, with slight variations. Lilies are better than last year, as a rule. The percentage of diseased stock is small, and the plants are taller and better proportioned. Of azaleas there is the usual abundance, the impression being, however, that there are no more and possibly fewer than last season. Hydrangeas are excellent; a great many of those grown as rosea are this year indigo blue, and the only explanation anyone can give is that "it is in the soil." Lilacs, genestas, acacias and rhododendrons are seen in usual quantity and quality. The rhododendrons are even better flowered than usual, but the verdict of the growers is that the demand for them is very weak for some reason. Astilbe in various species is generally good. Gladstone and astilboides floribunda seem to be the most approved. Crimson Rambler roses are ready in enormous numbers; there are not so many formally trained specimens seen as in some recent years, the loose bush form being the most common. In color it can safely be said that they have never been so uniformly bright. The growers have Crimson Rambler forcing studied down to a nicety.

Baby Ramblers, so-called, are being extensively grown by most of the plant men. The variety seems to be getting out of its babyhood with commendable promptitude; two feet high is not an uncommon size, and the growths are still traveling upward. The plants are covered with bloom, but suffer in color when in the neighborhood of the brighter-hued Crimson Rambler.

Next to this rose comes Dorothy Perkins, of which a good many are being forced this year, and the pure soft pink of its bloom is being well preserved. Wedding Bells is seen occasionally. Its worst characteristic is that the flowers acquire a rather dull hue after being open a few days; its best characteristic is the remarkable tenacity of its petals which hang on for two or three weeks. Ericas are, as usual, the aristocrats of the Easter offerings. Ventricosa varieties, persoluta alba, cupressina and Cavendishi are most in evidence. Large quantities of bulbous material, such as daffodils (double and single), tulips, Dutch hyacinths, lily of the valley, etc., are ready in pots and pans for the final touch of warm sunlight to open the flowers at the right moment. Daisies in several sorts will be among the popular Easter plants. Queen Alexandra is grown quite generally; few flowers show any sign of being double or semi-double, but the rich color of the disc gives this variety a distinction that meets with general approval. A moderate number of cinerarias, primroses (including Chinese and obconical), pansies, etc., are seen. The usual quantity of Lady Campbell violets in pots is promised.

PLANTS AND BULBS MOST IN DEMAND FOR EASTER TRADE.

Read before the Gardeners' and Florists' Club of Boston, by D. Lumsden.

There is a something about the approach of the Easter festival that inspires us with zeal and ambition. The very plants themselves seem to anticipate the approach of Easter. The lily, the queen of Easter flowers, appears to wear a whiter gown than at other seasons of the year, as Dame Nature smiles and adds beauty and coloring to all flowers; from the glorious rose to the humble little violet all share in in gladdening our hearts during Eastertide. It also imbues mankind with new hopes and ambition; a spirit of generosity is prevalent on all sides and the wealthy and the humble alike share in trying to make some one happy on that glad day, by sending a box of flowers or a plant with Easter greetings. From ancient times it has been customary to decorate our churches with Easter plants and flowers. Thousands make the first visit of the season to the cemetery, to adorn the graves of loved ones with flowers.

I do not purpose tonight to enter into minute details as to the culture of the Easter plants, as time would not permit me to do so. First and foremost ranks the lily. What would Easter be without the lily? Each year sees more lilies grown than the previous year and every year sees the lily more in evidence. We receive our lily bulbs during the fall months from Japan and Bermudas. Some growers pot them immediately into their flowering pots (which is considered a saving of labor), while others pot the bulbs into 4 or 5-inch pots to be repotted later when well rooted and active growth has commenced, the soil used being a good heavy fibrous loam with a liberal dressing of well decomposed manure with addition of a little sand to keep the soil open. They are then placed in a cold frame covered with about 3 inches of loam, the surface of the soil having been previously covered with a layer of sand or ashes after watering, so that when taken out of the frame the covering loam will not adhere to the pots. They are next covered with leaves, old straw or anything available and shutters placed over them until from the middle to the end of December, when they are then taken out and placed in a house, temperature about 60 degrees night; by that time they should be well rooted and commence to show signs of growth. The grower who puts his bulbs into their flowering pots at first has of course to commence to feed his lilies earlier than the grower who gives them a shift when they are well rooted in the small pots. Unfortunately for the lily grower disease is so prevalent and we have found no means of detecting it until the lily is well in foliage, therefore considerable expense has been added before it is thrown out. Regarding the correct temperature to grow lilies to be in flower for Easter it would be a difficult matter for me to state, as so much depends on the weather conditions, but the main point is to get the bulbs well established or rooted before you commence to force them. All bulbs do not mature exactly the same time in their native habits, so lilies for Easter trade need

a good deal of moving and shifting from house to house, to have them in good shape for Easter. It is far better to err in the way of being a little early than to have to force them during the last minute, as this naturally impairs their keeping quality and they are not so desirable to handle as lilies that have been well on time, and have had a chance to harden up the last week prior to delivery.

Next in importance comes the azalea, which we receive in large quantities each year from Belgium during the early fall. They are then potted up, placed in a cool house kept at a temperature of 38 to 40 degrees, brought in the forcing house (temp. 60 degrees) from time to time as required. The varieties most suitable for Easter trade are Bernard Andre alba, double white, Empereur de Bresil, double rose, Empress of India, rich rosy salmon, Mme. Van der Cruyssen, semi-double crimson, Professor Wolters, single, undulated pink, white margin, Haarensseana or Easter Lady, double, salmon shaded white, Dr. Moore, double, deep rose, a very fine variety. Strange to say, with few exceptions the single varieties of Azalea indica do not sell well with the commercial florist, although they are among the best in coloring and form of flower. Dwarf azaleas on their own roots make pretty plants for Easter and command a ready sale. The varieties are Chas. Enke, single, salmon with white margin, Marie Louise, single, white striped rose, and Firefly, semi-double, crimson scarlet, and a very desirable variety. Rhododendrons we treat practically the same as azaleas with the exception the rhododendrons must be shaded heavily during forcing or the leaves will burn and disfigure the plant. The varieties best adapted for forcing purposes are Blandyanum, deep rosy crimson, Everestianum, rosy lilac, John Waterer, deep amaranth, Kate Waterer, rosy crimson, yellow centre, Mad. Carvalho, blush, changing to pure white, Mrs. R. D. Holford, rich salmon, Prince Camille de Rohan, white with brown spots, and Princess Louise, white, edged with rosy purple. The rhododendron, although such a desirable Easter plant, does not sell readily, a limited quantity only being sold.

The Crimson Rambler rose is a standard Easter plant with us. All strong plants from the field may be lifted during the month of November, potted and kept cool for at least one month, the shoots having been shortened back to about 4 ft. When commencing to force them start slowly, allowing about twelve to fourteen weeks, which will be none too much time to allow them to be in nice shape for Easter. I may here state it is not policy to allow the shoots to run up straight; you get better results by training them around stakes in the pots; they make more even growth and much better shaped plants. The Baby Rambler will also become a very valuable addition to our Easter plants, treated practically the same way as the Crimson Rambler, with the exception of not being trained round the stakes; if judiciously pruned before starting it needs no stake at all, and being of a very floriferous nature and compact growth makes a handsome little plant which will sell at sight. In Hybrid Roses in pots for Easter we have to mention the following va-

rieties: Ulrich Brunner, Magna Charta, American Beauty and Gen. Jacqueminot.

Hydrangea Otaksa makes a nice plant for Easter, but sale for same is only limited. Astilba Japonica and varieties better known as spiraea is also grown as an Easter plant, also in large quantities for cutting for Memorial Day. Lilacs are sold in quantity for Easter trade, the varieties most suitable for forcing being Marie Le Graye, white, and Chas. X, purple. Acacia armata or paradoxa is a desirable plant; when treated like azaleas can be forced readily for Easter.

Cytisus, better known as genista, although we cannot class it as a good house plant owing to its flowers and leaves dropping caused by the dry air in the room, sells well as an Easter plant. The deep yellow color of the flowers, as well as the profusion in which they are borne tempts the buyer. The variety racemosus is the best seller; canariensis is a trifle deeper in color. I would not be doing my duty if I omitted everybody's plant, the geranium, from my list of Easter plants. With due respect to all other plants the geranium stands without a peer in its class and many persons who cannot afford to pay the price for a lily will gladly pay 25 cents for a geranium for Easter day. Geraniums made up in bulb pans about four plants to a pan, with nice flowers, make a very attractive Easter gift and command ready sales. The geranium is grown in large quantities to be presented to the scholars of the various Sunday schools on Easter Sunday.

In bulbs for Easter we find large quantities of the Dutch hyacinths grown from five to a dozen bulbs in a pan and when well grown and not too fully bloomed make an attractive Easter plant. The following varieties are among the best: Gertrude, rosy pink, Norma, fine pink, La Grandesse, pure white, La Innocence, pure white, Chas. Dickens, dark blue, and Grand Maitre, porcelain blue. Tulips in variety in pans also command a ready sale, the following being a few of the best single tulips: Belle Alliance, scarlet, Couleur Cardinal, bronze scarlet, Duc Van Thol, scarlet, Keizerkroon, bright red with broad yellow edge, La Reine, pure white, Mon Tresor, golden yellow, extra large flower, Rose Gris de Lin, pink, and Yellow Prince, yellow. In double varieties we have Coronne d'Or, yellow, La Candeur, white, Murillo, pink, Salvator, rose, and Tournesol, red and yellow. In narcissus, Von Sion takes the lead, and for cutting, also pan work, it is a good variety to handle. Bicolor Horsfieldii, Golden Spur and Princeps are all valuable varieties. Lily of the valley both cut and in pots and pans is invaluable for Easter decoration.

There are other useful Easter plants I have not mentioned, including various made-up combinations of flowering plants in pots and pans that time will not permit me to speak of. Any plants well grown in flower at Easter will find a ready sale. We sometimes hear it remarked when we see well-grown plants brought into our cities "That grower is quite a genius," and I think the title is truly applicable to a good grower, for as Carlyle defined the word, "Genius is at first little more than an immense capacity for taking pains."

DENDROBIUM DOMINIANUM.

Named in honor of Mr. Dominie who for a lifetime in the grand old establishment of the Veitch's of London, was one of the earliest and most ardent orchid growers and hybridists. *D. Dominicanum* is a garden hybrid, a cross between the grand old standard species *D. nobile* and that now almost extinct choice variety of *D. Linawianum*. This hybrid is one of the most beautiful varieties of the *D. nobile* type, very free flowering and a very dainty and delicately colored orchid, one which should be more cultivated than it is. It would make a very profitable florist's orchid not only for cutting purposes but to sell in a pan or crib suspended in the florist's window where it would certainly draw admirers and ready purchasers. It is of easy culture requiring the plain and simple treatment of *D. nobile*, which also, is a most profitable orchid for this purpose.

D. Linawianum in habit of growth resembles *D. nobile* but so distinct as to be easily recognized. Flowers nearly

white in the centre, sepals and petals being pale rosy lilac; the lip is small, white with two purple blotches in front, wholly purple in the throat. It is a native of China and Japan.

Another of the smaller flowering commercial orchids and which is very profitable for the florist, not for cutting purposes but as a plant, is *Cattleya citrina*, an inexpensive but very interesting showy sweet-scented orchid with its curious and rather unique form and habit of growth. Suspended upon pieces of cork bark or on blocks its glaucous foliage and citron yellow to deep yellow flowers with white fimbriate fringe, throwing a fine large bloom from every growth, then the white pseudo-bulbs, makes this a regular little gem of an orchid for the florist's window. These plants when in bloom are bound to draw the attention of lovers of flowers; they are not expensive and can be sold at reasonable prices and will pay well for growing them.

H. A. SIEBRECHT.

The remarkable call for the Crowe-anum fern in New York City is evidenced by the fact that John I. Raynor is disposing of three to four thousand a day regularly for Mr. Crowe.

SEASONABLE PREPARATIONS FOR EASTER TRADE.

Extracts from a paper read before the Detroit Florists' Club by Hugo Schroeder.

Though far from being a grower myself, I want to make a few remarks that I hope will aid him in his preparation for Easter. It is the man who grows the stock who has to do the most planning; in fact, now is the time to make notes to assist you in your selection of what to grow for 1907.

Lilies should come in for the first consideration. As to the number of blooms on a plant or its height, these have always seemed to me as depending merely on good or bad luck, but plants 2 1/2 to 3 feet high, with from 5 to 8 good blooms in different stages, sell best in this locality. It is well to have some planted into 3-4 or azalea pots, say from 3 to 5 plants in a pot, and well seasoned by keeping them rather cool the last week. About twenty-five per cent. of the lilies are sold on Wednesday before Easter; as these are for church use, the tall plants are generally preferred.

Azaleas are always good sellers; the dwarf varieties, of which Firefly is probably the best, are becoming very popular. In bulbhouse stock we have always found a ready sale for lavender, pink and white hyacinths (red are a fizzle). In tulips, Murillo is the best with Tournesol a close second, followed by Vermillion Brilliant and Proserpine.

American Beauties in pots sold very well last year, as did Crimson Rambler and Baby Rambler. Lilacs, hydrangeas, rhododendrons, daisies, genistas, spiraeas and a variety of other stock always help, for though nine out of every ten people want a lily, if one has no variety to show, the lily will not sell either. Every pot should be washed, and such plants as hyacinths, lilies, etc., properly tied up before leaving the greenhouse. The wholesale grower who follows this rule will also find a greater demand for his goods in consequence.

If you have any temporary benches or shelves to build, get them finished so that on Monday or Tuesday before Easter prospective buyers will not have to bring guides along to assist in scaling lumber piles. Palms, rubbers, ferns and other plants which do not meet with so much demand at this time should be set aside to give as much room as possible to blooming plants. While it would be foolish to have all or even half of the Easter stock brought into the store or showhouse the first part of Easter week, it is a good plan to have a nice assortment on hand early, as very often a customer sees some plant that strikes his fancy and, though he was only looking around, places an order at once. As, no doubt, you will have some green hands, mark the price on all plants and baskets in plain figures.

Pay particular attention to the show windows, changing the display several times during the week. In spare moments get ready a good supply of boxes, paper, tags, twine, etc. Boxes containing violets or cut flowers should be rearranged with the same care during the Easter rush as at other times, wrapping each box, to prevent it from becoming soiled in

delivery and for protection against frost.

One great item of extra expense on special days is extra help, generally very unsatisfactory help at that, but we must have it. If possible get people who have helped you in former years, not only because they will have had some experience, but you also know just what they are most suited for. It is good policy to hire extra help at so much per hour. Appoint some one to keep record of their time, and steer clear of friends or relatives, as it is hard to get the work out of them.

Place advance order for cut flowers early. If there are any baskets lying around from last year, clean them up and fill with suitable plants; also, have a nice assortment of new baskets, besides a good supply of pleated wax paper and ribbon. Under no circumstances will we bother with crepe-paper again. It is both unsatisfactory to yourself and your customer, as the dampness soon spoils it. The pleated paper is very quickly adjusted, and not so easily affected by water. Various colored mats also come very handy for trimming. By first moistening them they will not break and are much more easily manipulated.

Make arrangements for extra wagons early. It is absolutely necessary to give a great deal of attention to the delivery or shipping department, as many a good customer has been lost through mistake in delivering.

Leaving the shipping all in the hands of one man who does nothing else for the three or four busiest days is the only way to have it attended to satisfactorily. This clerk should be some old employee who not only knows the city from A to Z but knows how to handle drivers and errand boys and will give every detail his undivided attention. We generally manage to have good use for five wagons and three or four errand boys during the holidays, and acting in the capacity of shipping clerk, I have adopted the following system:

I select some convenient place where all sold articles are placed by the salesmen, and from time to time arrange each variety of plant by itself, with the tag in plain view. Then I have a cabinet made of eight boxes, just large enough to hold the order slips nicely. In appearance it is similar to a spice cabinet. It bears the following labels: Today, Car, North, East, West, North-east, North-west, and Special. For the orders to be delivered, say, Saturday, the slips are put into the Today box as soon as taken. Every morning when I take the shipment out of the Today box and distribute it to the other seven boxes, as, for instance, North, Car, etc.

When I take the shipment, I check off the corresponding slip, then lay the slips in the order to be delivered and write in route book, every other page of which is tissue, using copying paper. The heavy sheet is torn out and the tissue is placed in each auto. The slips are fastened together and marked with a number corresponding with the route, so that they can be taken back to the respective slip.

For plants in the city of

EXECUTIVE COMMITTEE, S. A. F., AT DAYTON, OHIO.

plants, particularly lilies, we have had made a number of boxes of half-inch boards, 15 inches by 15 inches by 6 inches deep, inside measurement, divided into four compartments. These are kept in the wagon, and help to keep plants from falling over, the plants being placed in the compartments. We also use paper hat boxes for large, trimmed-up pots, to protect paper or matting.

NEWS NOTES.

W. E. Lacey, whose greenhouses at Victoria-Bismark, Northampton, Mass., were destroyed by fire, is making arrangements to rebuild.

E. E. Fairbanks, who recently sold his greenhouses at Athol Centre, Mass., to C. H. Smith, has bought them back, and will remain in Athol.

E. J. Fancourt, that modest yet energetic representative of S. S. Pennock, has just returned from a six weeks' trip and reports that business in the supply and cut flower line was never better.

The building committee of the Florists' Exchange, Baltimore, Md., has commissioned Architect E. J. Laferty to prepare plans for a new building on their newly acquired property, corner of Franklin and St. Paul streets.

Representative Allen of Maine, introduced a bill in Congress last week to give protection to the ornamental horticultural products under the trade mark laws. The Department of Agriculture was placed on record in favor of the measure, which gives the producer of a new variety the right to name it and to secure a trade mark on the name which will protect his rights for twenty years in the production.

SAN FRANCISCO NOTES.

A couple hundred smart people from the State of Washington, including the Governor, were in San Francisco last week seeing the sights. The California Promotion Committee gave them a reception in the palm garden of the Palace Hotel. Prominent growers and florists, members of the committee, procured carte-blanche authority to enhance the beauty of the palm garden, and it is sufficient to say that choice flowers galore were tastily arranged and a rich sufficiency of floral creations dotted the garden here and there.

Growers and florists belonging to San Francisco's Outdoor Art League, inform me that league resolutions will be before the next meeting of the Board of Aldermen, requesting that a bond election be called, that the question of the acquisition of Telegraph Hill by the city may again be submitted to the vote of the people. Telegraph Hill is the first high elevation, barren and craggy, to meet the sight of visitors to the city, and the purpose of the league is to lawn and terrace it and cover it with choice plants and flowers.

Mrs. Timothy Hopkins is the most successful, and I believe, the largest, violet grower in the State, famous for its violets. One of the sights of California that no tourist, whether of the private car or personally-conducted variety, can afford to miss is the acres and acres of violets that Mrs. Timothy Hopkins grows for the market.

BUSINESS CHANGES.

James Hart, wholesale florist, has moved from West 30th street to 103 West 28th street, New York.

C. Besold, Mineola, N. Y., has leased his greenhouse plant to parties who will take possession July 1. Mr. Besold will go abroad hoping for restoration of good health.

THE CARNATION.

Read by A. H. Seckers before the Morris County Gardeners' and Florists' Club.

The carnation, as it is today, has proved itself a public necessity, and as such should be handled and treated accordingly. That it has rapidly gained in popularity, and is the equal, or shall I say the more successful rival, of its fair competitor the rose, is due largely to the fact of its keeping qualities, fragrance and adaptability, for it is found first in the expensive social function and foremost in the workingman's home.

The carnation as I remember it ten years ago, to the present day production has made rapid strides ahead, and although Mr. Ward may claim a 1000 years for each added inch, the last one seems to have appeared in considerably less time.

What a contrast we find between Portia and Robt. Craig or Victory, Daybreak and Enchantress, Lizzie McGowan and Lady Bountiful or Queen! Yet even these old favorites are not to be despised, for they had in them the blood with which the hybridizers have been enabled to produce the present day wonders.

In looking over an exhibition of new carnations and noting the difference between the various kinds, I have often thought that growers will one day be grading the carnation, as the rose, into fancy, first, standard and common classes. In the fancy class we have a type of flower which can be truly likened to the racehorse, and as surely as we strive after a higher ideal, and try to improve on the existing improvements, so will the treatment of same require to be given accordingly.

But as the majority of us are dealing with present day varieties, and not with what is to follow, perhaps a few remarks about those grown and proved successful may not be amiss. It is easy to select those kinds which meet with popular approval among the growers, not because of their color or fragrance, but because the grower is able to adapt himself readily to the requirements of his stock. If this is not so how is it that one variety does so well with one and shows up so poorly with another? Is it climatic conditions or treatment that brings Cardinal to the fancy class in Canada, while in our own neighborhood it is almost useless? Yet I fail to find one man who is complaining of Enchantress or Lawson. The same can be said of Prosperity, in the first class, and although now beginning to age, I do not doubt but what this variety can be brought to pay for its keep. Having had to do with a house of this kind the present season, I must say that results are more than satisfactory, and believe that with early propagated cuttings and grown from then until benching, in July, in pots, success may be had. I find, too, that it is a little of the racehorse type, a trifle stubborn, and needs the "jolly-ing" which a little extra heat may give it to bring it along. Wherever the plants are handicapped for want of heat, there we find the less flowers. This defect can be plainly seen in the house just mentioned, where one end

is always four degrees warmer than the other, besides being subject to drafts when going in and out, the house being apart from the others, causing the plants to be backward all winter, whilst at the warmer end no trouble is had to produce fancy flowers, long stems and clean foliage.

Enchantress and its sports, the various Lawsons, Roosevelt, Queen and Harlowarden are all varieties which can be depended upon to produce good marketable flowers, and if handled right, can be brought to a successful paying investment. The question of soil is a serious one for the majority of growers, and very often considerable outlay is necessary for the procuring of the right kind. What is the right kind? Each grower seems to have his own ideas about that. One successful man, located near Buffalo, with an area of 20,000 feet of glass, has used the same soil continually for the past seven years, mixed, of course, with manures and fertilizers. With discarded rose soil, thoroughly mix this outside with lime, bonemeal or cow manure, proportionately, I venture to say that no bother would be had to produce good flowers, providing good care and treatment was given same.

In the matter of planting, the different varieties in the benches have done best with nine inches between the row, and seven inches apart in the row. This applies, of course, to medium-sized plants, and to those which grow compact, and most of them can be made to do so by the usual method of wire and string support. In planting these distances apart, careful watch will have to be kept for red spider, and to the beginner in carnation growing I would advise planting little further apart each way.

During the growing season care should be exercised in feeding, as some varieties require considerable more than others, and if overdone—well, it simply can't be undone. I would recommend the frequent application of pure bonemeal, as it can be handled far more easily and is cleaner than manure. The one advantage I find this method has over manurial waterings is because each plant gets its own share and can absorb the nourishment at leisure, whilst a heavy douche given at least once a week with manure water, besides occasional clear waterings between times, has a tendency to keep a good many plants too wet, as I have yet to find the greenhouse so situated that all the plants are ready for water at the same time. Consequently, if you are soaking the plants that are wet with your weekly feed, the result is soon apparent, as the benches will be empty. I would not in any way despise top dressing of cow or other manures, and consider it a decided advantage in giving a change of diet; but, as soon as the manure goes on the bench, your troubles commence with weeds, mites, sour soil and worms, and, incidentally, I might mention stem rot.

The past season has been a very poor one in regard to propagation, owing, no doubt, to the long spells of cloudy weather making the ground soft. But not all the blame can be laid to that alone, as in a matter of so much importance the question of experienced help arises, and this part of the work should be undertaken by an efficient man. During the last few years it has been (perhaps, I might

say) my misfortune to have to deal with green help, and whilst I have learned something, the knowledge has been derived after losses which could have been avoided. When the operation of trimming the cuttings commences, take the time to give careful instructions to the uninitiated—yes, and to some of the so-called "experienced"—not to destroy the outer skin or bark at the base of slip, thus exposing to the water and air the soft pith, which has no power to withstand the elements and, consequently, after four or five days will have rotted.

In putting same in the sand, too, the same care should be given to see that the bottom of each cutting rests firmly on the sand, for unless these two, the bottom of cutting and the sand, come directly in contact with each other the capillary action is unable to commence its work, and as the action, which is all on the side of the cutting, is not a magnet to draw the moisture up, the result is apparent in a dry cutting.

The split carnation is a topic to which one might perhaps be able to devote an entire paper. I might say the two greatest causes are too sudden changes in temperature and the lack of sunshine. The first can be avoided by constant attention to ventilators and boilers, so that in cold, bright days of midwinter, when the fires are low, care should be taken to have pipes hot enough to let temperature drop easy, as the sun departs. The latter cause can be helped somewhat by giving all the air possible, consistent, of course, with common sense, so that the plants may become strong, also in the selection of stock for propagating, to select only the strongest and best cuttings, as this trouble of splitting is, I believe, hereditary; and whilst some varieties will split, however good you treat them, we can keep down the percentage if we handle them correctly.

The every-day varieties, I find, do best in a night temperature of 54 degrees, and in the day, 68 or 70 degrees, when the sun shines. On cloudy days, air is given when the thermometer reaches 60 degrees, according as the weather is boisterous or calm.

The cutting and packing of the carnation for the market is work that should be done by experienced help, as upon this depends the success of your enterprise. Try and arrange, if possible, to have all flowers in water at least twelve hours before shipping, and keep them in a cool place; and now that the warm days are approaching, our flowers will be in a better salable condition and last longer when the customer purchases them if we can find it convenient to cut them first thing every morning, when they have recuperated during the night.

We all know that stock shipped in is not handled with the best of care by the express agents, so exercise judgment in packing the same firmly in strong, clean boxes, so that when jolted backwards and forwards the neck of each flower will not be broken, as I have seen many treated that way. This will save you lots of unnecessary worry and arguing with your agent, and will enable him to secure better prices, and in time your reputation will become established as a first-class grower, and by attending to even the smallest detail, sooner or later success will be yours.

CARNATION NOTES.

(Extracts from a paper read before the Chicago Florists' Club by Jos. F. Klimmer.)

By this time every carnation grower should have his plans ready for next season; he should know which varieties he intends to plant next fall and what varieties he has to discard. There are quite a few growers, like myself, always ready to buy a reasonable amount of those liberally advertised novelties, and now after trying them for a season, the question is, did they give satisfaction?

Last August I planted 410 plants of Fiancee in the bench. . . . They produced in October 625 first class flowers; in November, 169; in December, 69; in January, 13; and in February, 4. This is a rather stunning average, but I believe it is to a great extent my own fault, because I treated Fiancee in the first week in November to a fairly liberal dose of manure and bone meal, and in return got an immense crop of fantastic-looking splits which nobody would buy. I wonder will we ever learn to let well enough alone? I am convinced that if I had left the fertilizer off, 65 per cent. of the splits would have been salable flowers, and Fiancee would have been a fairly well paying proposition at least up to Christmas.

Cardinal produced quite a few black and distorted flowers, but they also gave me a very liberal amount of good, first class flowers, with fairly strong stems. We had about 30 plants which kept entirely clean of rust and certainly came up in every respect to the introducers' description. Some of the plants I have now in 4-inch pots will be planted out early as possible to give it a trial as a summer bloomer.

Lieut. Peary is, in my estimation, the best of the last year's introductions. It is a strong, upright grower, steady and even bloomer, makes no surplus grass, and is entirely free from rust or any other disease.

In scarlet I grow Flamingo, Estelle and Cardinal and in addition will also have 300 each of Robt. Craig and Vic-

tory. I need Estelle for a good common scarlet in the winter, and early in April I take up the old plants from the bench, cut them back severely and then plant them out for summer blooming. Flamingo is considered by our Chicago retail florists the best scarlet winter carnation on the market. It has been a failure in a good many cases, but in most cases I believe it is the treatment. The plants must be good and strong when planted out; do not pinch it back any more than absolutely necessary; after August first pick off all buds high up on the stem until October 20th, then let them bloom all they can until March 15th.

Flamingo wants to be planted in sandy soil or soil with a liberal quantity of half-rotted horse manure to make it porous; give it plenty of water, but do not feed at all, because feeding is likely to spoil the keeping quality and produce more splits. As an explanation I can state that the first lot of 500 I bought in January, made large and elegant plants, that came in bloom in August; I pinched those flowers off before planting them in the house and let them come into bloom again in the latter part of September, but had to pick those flowers off because they would not keep, but in the latter part of October, when the weather got cool, they improved rapidly and by Christmas cut an average of 13 flowers per plant. By March 10 we had an average of 18 flowers. Just about then the flowers get spotty and the plants grew so much to grass as to be almost entirely worthless. Seeing that my first lot did so well, I bought 200 more in the fall, all good healthy plants from the field, but considerably smaller than my own. These plants had from the 20th of September on the same treatment, were planted in the same soil and in the same bench, and I did not cut a flower of those 200 plants until Jan. 11, and then they only averaged quite 6 flowers per plant up to March 10, when they also gave out. Another important point is in disbudding. In rubbing off the bud next to the flower, the main stem is very liable to be injured, and the flower will have a peculiar crooked neck; since I found it out we let the last bud on until the flower is cut and the trouble disappears.

For white, I shall grow Lady Bountiful, Dorner's White Perfection, Lieut. Peary and Vesper, and will discard Albatros and the Belle. In light pink, I shall grow Enchantress, discarding Morning Glory. Possibly Genevieve Lord may have to make room for Helen Goddard, although the former has proved satisfactory. Mrs. Lawson will be discarded in favor of Nelson Fisher and Pink Patten. Pink Patten, I believe, will be in another two years a warm competitor of Mrs. Thomas W. Lawson. For variegated, M. A. Patten seems to be the best with me.

This completes my list for next season, and I hope it will turn out satisfactory, though I still wish the Lord would throw a sport or a seedling my way that has the clear color of the Marquis and the general growth, habit and keeping qualities of the Patten.

Anyone Can Grow The Improved Countess of Lonsdale (Dahlia)

This is by far the most handsome and useful Dahlia of the Cactus type introduced to date. The flowers are large and the color is intense crimson scarlet, lighting up beautifully at night. The flowers, very large, are borne on tall, stiff, erect stems and their profusion is extraordinary. Among the many Dahlia blooms shipped into the New York Wholesale Market none are more popular with the retail Florist than the Improved Countess of Lonsdale. Strong divided field-grown roots. Price six for \$1.00, \$1.75 per doz., \$12.00 per 100.

SEED TRADE.

It looks now very much as if what bid fair to be one of the best seed seasons in years, will turn out to be only an average business. The severe winter weather from March 10 to this writing, has put a sudden stop to the splendid run of mail orders all the trade were receiving. Reports from many sections confirm the above—from ten days or so behind orders, comes the contra of already letting extra hands go.

CATALOGUES RECEIVED.

Arthur T. Goldsborough, Washington, D. C., new berries.

J. N. Kramer & Son, Cedar Rapids, Ia. General seed and plant catalogue.

Bay State Nurseries, North Abington, Mass. Trade list of fruit trees and herbaceous plants.

"Hardy Trees and Plants," is a profusely illustrated catalogue issued by the Peterson Nursery, Chicago.

S. C. Moon, Morrisville, Pa., wholesale trade list of ornamental trees, shrubs and hardy border plants.

Julius Heurlin, South Braintree, Mass. Catalogue of herbaceous plants and coniferae. This catalogue is a gem in every way. The illustrations are fine throughout.

Foley Manufacturing Company, Chicago. Materials for greenhouse construction. Illustrated with numerous half tone engravings showing that the Foley construction is popular in all sections of the country. Send for the book.

Manning's Monographs, No. 2, published by J. Woodward Manning, Reading, Mass., is devoted to hardy rhododendrons, azaleas and mountain laurel. It is full of useful matter compiled from various sources, and the author's own extensive experience. The lists of rhododendrons will be found especially valuable.

"How to Grow Asters," by James Vick's Sons, Rochester, N. Y., is considerably more than a catalogue. It is a twenty page pamphlet full of practical instruction covering the subject of aster growing in all its phases. The various chapters treat of sowing the seed, planting out, cultivation, problems and diseases, destructive insects, etc., and a classification of early, medium and late varieties is applied. This useful booklet may be had for the asking.

The annual report of the Cleveland (Ohio) Home Gardening Association for 1905, shows a steady growth of interest in the five years of its existence. A woman curator of school gardens has now been appointed. Last spring, 389,895 one-cent packets of seeds were sold to the school children. A city department of forestry has been established through its efforts.

HARLY PHLOX PANTHEON.

DREER'S HARDY PHLOX

We offer in strong, field grown plants that were cut back early in the season and potted up into three inch pots, and which will give an abundance of blooms this season, much superior to young, newly propagated plants, such as are generally sent out in spring, the following list of choice varieties.

Bridesmaid. Pure white with large crimson eye.

Beranger. White, suffused pink, crimson eye.

Bouquet Fleuri. White, with deep rose eye, each individual truss a complete bouquet.

Champs Elysee. Fine rich purplish crimson.

Coquelicot. Bright orange scarlet, carmine eye. \$1.00 per dozen; \$8.00 per 100.

Colibri. White with deep rose centre.

Eclairer. Purplish crimson with light halo, very large.

Esclarmonde. Lilac, mottled white, deep rose eye.

Eugene Danzenvillier. Lilac with white edge and centre.

F. G. von Lassburg. The finest white. \$2.00 per dozen; \$15.00 per 100.

Graf von Ungerer. Light rose, crimson eye.

Jeanne d'Arc. A fine late white.

La Soleil. Salmon rose with light centre.

M. Gladstone. Soft rose, large flower.

Marquis de St. Paul. Deep rose, overlaid salmon, crimson eye.

Moliere. Salmon rose, deep rose eye.

Mrs. Jenkins. A fine large pure white. \$1.25 per dozen; \$10.00 per 100.

Obergartner Wittig. Bright magenta with pure red eye.

Offenbach. Bright rose with large white halo.

Otto Thalacker. Magenta crimson.

P. Bonnetain. Salmon rose. 75 cents per dozen; \$6.00 per 100.

Pantheon. Deep salmon rose, free and effective.

Professor Schlieman. Bright lilac rose with carmine eye.

Pecheur d'Islande. Soft salmon red, with white centre.

Selma (new). Beautiful light rose pink with large aniline red eye. large flowers. \$2.00 per dozen; \$15.00 per 100.

Semiramis. Purplish magenta.

Sunshine. Deep salmon pink, with deep rose eye.

Simplon. White suffused with lilac and dark rose centre.

Price. Any of the above (except where noted), 75 cents per dozen; \$5.00 per 100; \$40.00 per 1000.

Phlox Subulata—Moss Pinks. Alba, Atropurpurea, Lilacina, Nelsoni, Rosea and Bridesmaid, strong field grown plants 75c. per doz.; \$5.00 per 100; \$40.00 per 1000.

Special Surplus Offer of Roses.

White Maman Cochet, Pink Maman Cochet and Hermosa

Three of the best bedding Roses grown. We have a larger stock than we care to carry. These are strong field grown plants which were potted up during December into five inch pots, were stored in cold houses; they are now nicely rooted, making an excellent growth and in the best possible condition for the retail trade. We offer as long as the surplus lasts at \$2.00 per dozen; \$15.00 per 100; \$125.00 per 1000.

We are headquarters for Hardy Perennials, Pot Roses for out-door planting, Water Lilies, Decorative Greenhouse plants, all of these as well as a full line of seasonable Florists' stock, which is fully described in our new Wholesale List issued April 1st, a copy of which will be sent to the trade only.

Three Sterling Carnation Novelties

Winsor, White Enchantress, and Helen M. Could

There is nothing about any of these varieties that we wish to conceal; therefore, we cordially invite all carnation growers to pay us a visit. Come at any time.

WINSOR—Winner of Lawson Silver Medal.

This is sure to prove a winner. Nothing approaches it in color, which is a clear silvery pink—a shade between Enchantress and Mrs. Thos. W. Lawson—and much more beautiful than either. In fact, it is just the shade that we have all been trying to get. The color will make it sell in any market. The stem is just right. The flowers are considerably larger than Lawson and much better shaped. As a grower it has everything that can be desired. So far we have not seen any large-flowering variety quite so free as Winsor.

WHITE ENCHANTRESS.

A pure white sport of Enchantress, at once the most popular and most profitable carnation grown today, on account of its size and stem and freedom with which it blooms. White Enchantress is identical in every respect but color. Those desiring quality as well as quantity will find it in White Enchantress.

HELEN M. COULD.

This is a beautiful variegated sport of Enchantress. The ground color is a lovely shade of clear pink, the variegation carmine, making an exquisite combination of colors, besides being something distinctly new. At a short distance the variegation does not show at all, the general effect being a beautiful shade of dark pink. Growth, habit, size, and stem are the same as Enchantress.

We have fine stocks, from which we can deliver healthy cuttings of Variegated Lawson, White Lawson, Red Lawson, Enchantress, Mrs. M. A. Patten, Lady Bountiful, etc.

Our Variegated Lawson is all that we claimed for it last season, and is giving the fullest satisfaction everywhere—the best in the variegated class. Come and inspect our stock of new and standard sorts

INNES & McRAE, - Cheswick, Pa.

Some People have taken our advice as published in these columns recently. **My Maryland**

ly and are buying for trial. We reiterate here—it it succeeds with you as it does with us, it will prove the best white carnation you ever grew. Despite the variety's apparent failure in several places, we strongly advise all growers to give it a trial. We have been frank about its faults as developed in other places. We doubt if these will develop in many places.

Jessica we believe, will succeed generally and will prove to be the best red and white variegated ever disseminated. Few varieties show as strong constitution as this one does and it is a wonderful producer. Extra fine stock of both varieties ready now. R. C., \$2.50 per doz., \$12.00 per 100. \$100.00 per 1000. Pot plants, \$3.00 per 100 extra.

Send for our catalog, now ready.

Impatiens HOLSTII without doubt one of the best varieties in years, being a continual blooming plant of scarlet flowers, excellent for pot culture as well as for bedding, sells on sight. \$1.00 per dozen; \$6.00 per 100. Try it, and you won't do without it.

CHRIST. WINTERICH
Defiance, O.

EASTER PLANTS.

(Robert Craig Before the Florists' Club of Philadelphia.)

On April 9, 1888, just eighteen years ago, I read a paper before this club, in which I alluded to the Easter plant trade as having become the most important of the whole year. I recited the fact that there had been a great advance in the quantity of plants grown as well as in the increased variety from the time, only a few years back, when callas, geraniums, mignonette, violets, etc., were the chief staples. In that year, 1888, I mentioned *L. Harrisii*, *L. longiflorum*, *hydrangeas* *Otaksa* and *Thos. Hogg*, *azaleas*, *deutzias*, *genistas*, *Astilbe Japonica* and hybrid roses as the chief staples. All of these are still grown, only in larger quantities, and the general culture is better; finer specimens are grown. Since that time we have had several notable additions to the list of Easter plants. I think the *Crimson Rambler* may be mentioned as the most important; it is still a very valuable plant; the much heralded *Baby Rambler*, while very valuable as a bedding rose, is not so good for Easter purposes, especially in large specimens. *Dorothy Perkins*, the pink *Rambler*, is fine, and has come to stay. In the same class may be mentioned several of Mr. Walsh's new hybrid climbers, particularly *Lady Gay*, which is a superb thing. A German rose called *Leuchstern*, a single pink with ring of white inside and the centre yellow, which I saw in New York the other day, impressed me very favorably; the foliage was fine and the blooms pretty and abundant, and it seemed to be a good keeper, not easily shaken off. A few other varieties of roses are fine for Easter; chief of these is *Magna Charta*, Mrs. John Laing; *Frau Karl Druschki* promises to be a good white, although it has hardly had a fair trial yet.

A very desirable new plant is the *Marguerite Queen Alexandra*; it makes a fine pot plant.

In the *spiræas* we have had several improved varieties; the best one, all things considered, is *Gladstone*.

Bougainvillea Sanderi is another very valuable Easter plant and if the wood is properly ripened will flower most profusely in all sizes of plants from those in four-inch pots, suitable for basket work, up to very large specimens.

Cineraria stellata, of the improved compact growing, fine colored varieties, is a very showy plant but still capable of further improvement by careful selection of seed from those varieties most suitable for store use.

A plant which I have not seen with the Philadelphia growers, but which is well done in New York, is the *boronia*, which bears its globular pink-purplish flowers in great profusion.

Another plant worthy of culture is the *Lilium speciosum rubrum* and *album*, which are valuable either for cutting or as pot plants; they are easily obtainable at Easter from cold storage bulbs. Another plant deserving of culture is the *Deutzia Lemoinei*, which was tried and discarded several years ago by several of our growers as inferior to *Deutzia gracilis*, but which is now proved to be valuable by several growers, particularly as to the

durability of its flowers, which do not drop as easily as those of *Deutzia gracilis*; the chief point in the culture being the lifting by first of August or before, so as to have the pots full of new roots before cold weather; this method is necessary also with *D. gracilis*.

There has been introduced to this country this year a valuable new *azalea* named *Julius Roehrs*. This will undoubtedly become a leading standard variety; it is of the same general character as *Madame Vander Cruysen*, but of a richer, brighter color. *Rhododendrons* are now largely grown, the best new one that has come to my notice is *Red Camille de Rohan*.

As we have had from time to time valuable additions to the list of Easter plants, so we may continue to expect them. We are promised a new pink *spiræa* for next year, of a lovely shade of color, for the stock of which one thousand pounds is reported to have been refused.

The growing of plants for Easter involves much extra work in the moving from house to house as the weather changes, so as to have everything "just right" at the one time, the compensation for this extra work being that there is generally a demand for all good plants at a fair price.

Inclosed is check for \$2.00; please enter two subscriptions to *HORTICULTURE* both to commence with the superfine issue of last week, the special Rose Number, for which please accept our hearty congratulations and our request to keep it up, we enjoy it and appreciate it so thoroughly.—D. B.

We do not need to advertise Victory aggressively any longer. We are making prompt deliveries of Cuttings daily and are giving universal satisfaction. ENOUGH SAID!

CUT FLOWER MARKET REPORTS.

BOSTON The flower market shows no improvement over last week and little is expected until the Easter demand sets in. Business is very dull in all lines and, with the heavy receipts, sales are forced in order to prevent accumulation. Roses of all kinds, especially American Beauty, are being received in increased quantity and prices are tending downwards, although the quality is unexcelled. For carnations there is a fair market. The prospects are for an abundance of everything for Easter.

BUFFALO Three days of rain the previous week has not helped an already depressed market. The supply on all lines is more than sufficient to satisfy the present demand. The quality on roses and carnations is good, but owing to large cut and small demand the market is blocked up considerably and the latter part of the week found an overstock on roses, lilies and bulbous stock to such an extent that prices took another tumble. Carnations were not so plentiful at the end of the week and demand somewhat better than on roses. Violet shipments are somewhat lighter and demand fair. Mignonette of ordinary quality are very plentiful and moves slow, while fancy finds frequent buyers. Excellent sweet peas and lily of the valley are to be seen and move rather slow, in fact everything has to be urged. At time of mailing this report the market is more brisk and prices hold firm on carnations, but roses and other stock still abundant.

CHICAGO The market assumed its seasonable quietus this past week, with the usual Saturday and Sunday spurt. The quality and color in all grades of stock is beautiful. The retailers can make displays of cut flowers such as has never been seen. The new roses which have been successfully introduced have done much to increase a demand in cut flowers for this year.

COLUMBUS As I write on this last day of March the ground is white from the still falling snow. Not since Sunday, March 11th, have we seen the sun—when it has not been snowing, it has rained, so you can imagine the weather; and about how happy the craft feels. As regards the present market very little change has taken place since a week ago; if anything, roses are a little stiffer in price owing to the natural disposition to hold them back, all possible for Easter. There are some very fine Keizerskroon (Grand Duc), and Proserpine tulips in the market, which find a most ready sale. In regard to Easter stock, it really looks as if most

of the flowering plants were coming just about right; hydrangeas and spiraeas need sun more than anything else, but the Crimson Ramblers and all bulb stuff is in very good shape. It would certainly seem only natural after such execrable weather, and slow trade as we have had for the past month, that the bright days which must be ahead should bring a great Easter business. I failed to mention that a trip among the growers, shows lilies about right for Easter in spite of the bad weather.

DETROIT Cut flower sales were a little on the decrease the past week. Easter orders are coming in as the day draws near and preparations are being made for a busy week. At the wholesale houses stock has been scarce the past few days, and it looks as though there is a general holdup just when the retailers should have fresh stock with which to invite new trade. Violets are very poor and do not sell. Sweet peas are coming good and are quite saleable. Lily of the valley does not move. Azaleas are moving nicely, as are lilacs and rambler plants.

LOUISVILLE Business the past week has been very quiet, and Easter will probably find a great supply of stock in nearly every line. Quantities of carnations and roses are coming in, and the quality is satisfactory. There is a steady demand for violets and mignonette, but the violets are not up to the standard. Forget-me-nots, hyacinths, jonquils, tulips, etc., are equal to the demand.

MINNEAPOLIS Business has been very good the past week. Easter lilies are putting in a good appearance and are sold readily at the top prices. Azaleas and rhododendrons are fine, as are also the lilacs which are to be seen among the leading florists. Baby Ramblers are good, but not so good as they will be later. Roses are plentiful, but the darker shades of carnations are very scarce. Smilax and Asparagus plumosus are scarce. All that is used around here is shipped in from outside growers. The price of violets has gone up in anticipation of the Easter demand, but they will not be alone on the top shelf very long.

NEW YORK Although displaying a considerable activity as compared with the utter stagnation of last week, the flower market is not at all brisk. Large quantities of material in all lines are being received at the wholesale establishments and, when pleasant weather favors, most of the shipments are disposed of, the street men

getting a goodly share at very low figures. One thing that strikes the experienced observer is the very general high quality of the stock. Never before has the Easter supply shown such promising excellence. American Beauty roses as now offered have never been surpassed and rarely equalled. Lilies are good. Should the cool weather now prevailing last until Easter the cut flower trade will make a particularly clean and satisfactory record.

PHILADELPHIA

Supplies came in heavily last week, the clear weather and lengthening days being responsible, and the market was unable to absorb all of it, although business was fairly active. As a result prices sagged considerably. Even white roses, which have been selling well all the season, suffered with the rest. Beauties are down to twenty-five cents for first quality. Killarney, Chatenay, and other standard sorts are plentiful and good but prices are low. Lily of the valley crop is heavy and does not move off as freely as it should. Violets are fine but low in price. Cattleyas and other orchids are scarce.

DAGGER FERNS.

STOCK, BEAUTY OF NICE.

We are sending you a photograph of Stock, Beauty of Nice, a delicate pink variety, which has done very well for us. They produced full 85

per cent. double flowers with stems running from 40 to 46 inch. We received \$2.00 per dozen for them in the wholesale market.

LOUIS J. REUTER.

THE GLASS SITUATION.

The firmness noted in our last report shows signs of continuing right along until fall, as the American manufacturers are approaching the close of the fire, with their product well sold up at high prices, while the foreign market is kept high on account of the possibility of curtailed production, owing to the strike which is expected to develop on May 1st. The American manufacturers on Thursday last advanced their price about 5 per cent., and those who have any glass to sell for future delivery are asking a further advance.

On the greenhouse sizes the demand has been especially heavy this year, and orders for regular greenhouse sizes pay a premium.

LIST OF PATENTS.

A VACUUM SYSTEM IN GREENHOUSE HEATING.

Read before the Detroit Florists' Club by Frank A. Simonds.

In deciding the question of heat for greenhouse work, there are four different systems today that can be considered and that cause a diffusion of heat in the building to be heated. The system of hot air circulation, which, owing to its many disadvantages, has been discarded for more modern meth-expensive to generate for the extensive demands in this line, and so cannot be considered.

Hot water, under a gravity, or natural circulation, also the same medium under a forced or positive circulation. This medium is now used with very satisfactory results, even with the gravity circulation, although necessitating, as a general thing, the sinking of the hot water boiler below the ground level, which, aside from the expense of such, has its disadvantages, of that low setting, in not being as convenient as if it were on the ground level; this gravity circulation is also very slow. Another point that is often ignored in such a system, and usually to avoid first cost in installing, is in running the mains too small to secure the best results, and such is only natural, as the excessive size of the mains for such a system increases the cost at an alarming rate. When such a system is installed properly, and is not too extensive, fairly good results are obtained when a uniform, artificial heat is needed.

Should, however, it be necessary to increase or decrease the temperature on short notice, this system is too slow to respond, as the large amount of water contained in the system requires considerable time to absorb, from the furnace located quite a distance away, heat sufficient to increase its temperature all through the system, while it is, at the same time, radiating its heat through its long lines. The same is true in case the weather moderates rapidly, or the sun breaks through the clouds and showers considerable warmth through the glass, as, while the furnace can be crowded to increase the temperature of the water, it is surprising how long this volume of water will retain its heat after all is done to check the fires, or even the valves are closed to stop the circulation.

Again, in extreme cold weather, with high winds and the thermometer outside going away below what was contemplated when the system was installed, and the radiation figured, and an extra amount of heat is required to meet such conditions, it is found impossible to increase the temperature beyond a point below that of boiling water, which limits the maximum temperature.

With the forced circulation system of hot water heating, while the boiler can be placed on the ground level, and the mains can be made smaller and the circulation beyond the limits of the gravity circulation, the same objections are open, to the slow change possible in the temperature. The mains being smaller, and necessarily a smaller volume of water in the system to heat or cool, reduces this objection to that extent, at the same time, although the water may be kept at a high velocity in the system; on

account of its volume, it will heat or cool very slowly, and the circulation is unable to compensate for this, the result is that it will be too slow under the varying conditions to meet the requirements.

I do not want it understood that I mean to imply that the heat in the water cannot be made more effectual, and utilized to a better advantage with the forced circulation than without it, as I agree with the advocates of this system in this. But I do contend, and I believe all must agree with me, that it takes longer to heat a large body of water than a small one, and even with the smaller mains and less amount of water in the system on account of such, the rise in temperature of even this lesser amount of water is slow, when required in a limited time, and, when not needed, even if the circulation is stopped entirely, it will remain hot much longer than desired, especially if other outside influences are giving all the heat demanded without requiring any artificial heat.

Steam heat is the fourth source of artificial heat for such service, and while it has been used with a greater or less degree of satisfaction, according to the method or plan it has been installed under, it is certainly the most flexible and easiest controlled heating medium yet considered when installed and handled as it can be, under the most modern and improved methods.

(To be continued)

GREENHOUSES BUILDING AND PROJECTED.

Summit, N. J.—V. Hammond, one house, 30x150.

Denver, Colo.—F. C. Maler, two houses, 25x100.

Anton Schultheis of College Point, N. Y., who is one of the most alert plant growers in the country, uses the following mixture for the control of all insects on all plants, including the tenderest, at any time and in any weather:

To 45 gallons of water add four ounces of Nikoteen and one pint of Carman's Antipest.

Try it and if it works, as we know it will, give HORTICULTURE the credit when you order the Nikoteen and the Antipest.

WANTS

Advertisements in this column one cent a word. Initials count as words. Cash with order.

TO LEASE FOR A TERM OF YEARS my greenhouses consisting of about eighteen thousand feet of glass, all Hitchings & Co. boilers, and four of the houses are also Hitchings & Co.'s construction; city water on premises, two trolley lines one block, and railroad station two blocks from the premises; three miles from 34th St. ferry. Geographically they are in the centre of Greater New York. If you want a place this is a rare chance, so do not write but come and see it, possession June 1st, 1906. Apply to Alex S. Burns, 128 4th St., Woodside, Queens Borough, N. Y.

FOR SALE—Two greenhouses, 23x95, 20x68, with hot water heating apparatus and well stocked with Carnations and Violets. Will sell as it is with dwelling house attached and 17,000 feet of land, or to be taken down and removed. Address 703 Chestnut St., Waban, Mass.

One experienced fern grower; one experienced man in stove and greenhouse plants; and one first class herbaceous man. Good wages will be paid to first class, capable man, and steady position. Address S. R. care HORTICULTURE, 11 Hamilton Place, Boston.

SITUATION WANTED by a young Protestant married man, as Gardener, or Foreman on a private estate. Life experience, references warranted as to character and ability. F. care HORTICULTURE, 11 Hamilton Place, Boston.

WANTED — An assistant capable of handling the vegetable and fruit growing work outside in a large private garden. Wages, \$50. James Holloway, "Dorsoris Park," Glen Cove, L. I., N. Y.

BY SLIPPING A

PEERLESS GLASS REPAIR CLAMP

over a cracked glass you protect your stock, save coal and glass. Do it now before the high winds play havoc with your roofs. \$1.00 will repair 150 lights. Ask your supply man, or

A. KLOKNER, Wauwatosa, Wis.
Endorsed by about 400 prominent florists.

Business still remains quiet. Flowerers of all descriptions are very plentiful. The prospects for Easter stock are good, as far as bulbs and plants are concerned. Roses and carnations will probably not be over plentiful, as most of the growers will be caught between crops. There will be a heavy cut of lilies for Easter if the weather holds good meantime.

INDIANAPOLIS.

When You

buy tobacco dust to burn from a seedsman, thinking it is **THE FUMIGATING KIND TOBACCO POWDER**, ask him if the bags bear our brand, name and address; if they do not, you are getting his substitute for it—ground stems—and not **THE FUMIGATING KIND TOBACCO POWDER** made from the pure leaf tobacco, which seedsmen seldom keep, as our price to you and to them is the same. You can try ours for a few cents; let us tell you how.

GREENHOUSE GLASS

German and American

261 to 287 A St., BOSTON 20-22 Canal St.

A Bit of Information

Its good to have in a convenient form bits of information that will help you in making up your mind—and your order for a greenhouse

Cypress is furnished in even foot lengths only. For instance a 20 ft. wide house, having roof built with the usual pitch, requires a roof bar 12 feet long. Figure it this way; for every additional 2 ft. of roof bar the width of house is increased 3 ft. 4 in. Thus a 14 ft. bar would make a house 23 ft. 4 in. wide. This rule applies to all bars up to 20 ft. long.

Now when you come to buy your materials, its a satisfaction—and a saving—to know that you have an estimate that covers everything, guaranteeing you against series of vexatious delays—those extra expenses that creep up and pull your first year's profits down.

Three Sterling Carnation Novelties

Winsor, White Enchantress, and Helen M. Could

There is nothing about any of these varieties that we wish to conceal; therefore, we cordially invite all carnation growers to pay us a visit. Come at any time.

WINSOR—Winner of Lawson Silver Medal.

This is sure to prove a winner. Nothing approaches it in color, which is a clear silvery pink—a shade between Enchantress and Mrs. Thos. W. Lawson—and much more beautiful than either. In fact, it is just the shade that we have all been trying to get. The color will make it sell in any market. The stem is just right. The flowers are considerably larger than Lawson and much better shaped. As a grower it has everything that can be desired. So far we have not seen any large-flowering variety quite so free as Winsor.

WHITE ENCHANTRESS.

A pure white sport of Enchantress, at once the most popular and most profitable carnation grown today, on account of its size and stem and freedom with which it blooms. White Enchantress is identical in every respect but color. Those desiring quality as well as quantity will find it in White Enchantress.

HELEN M. COULD.

This is a beautiful variegated sport of Enchantress. The ground color is a lovely shade of clear pink, the variegation carmine, making an exquisite combination of colors, besides being something distinctly new. At a short distance the variegation does not show at all, the general effect being a beautiful shade of dark pink. Growth, habit, size, and stem are the same as Enchantress.

We have fine stocks, from which we can deliver healthy cuttings of Variegated Lawson, White Lawson, Red Lawson, Enchantress, Mrs. M. A. Patten, Lady Bountiful, etc.

Our Variegated Lawson is all that we claimed for it last season, and is giving the fullest satisfaction everywhere—the best in the variegated class. Come and inspect our stock of new and standard sorts

F. R. PIERSON CO.,

TARRYTOWN-ON-HUDSON, NEW YORK.

Begonia Gloire de Lorraine
Cuttings from 2 1/2 inch pots.
Ready for 4 inch. Price \$10.00 per 100.
Satisfaction guaranteed. Order now or order now
INNES & McRAE, - Cheswick, Pa.

Some People have taken our advice as published in My Maryland

these columns recently and are buying for trial. We reiterate here—if it succeeds with you as it does with us, it will prove the best white carnation you ever grew. Despite the variety's apparent failure in several places, we strongly advise all growers to give it a trial. We have been frank about its faults as developed in other places. We doubt if these will develop in many places.

Jessica we believe, will succeed generally and will prove to be the best red and white variegated ever disseminated. Few varieties show as strong constitution as this one does, and it is a wonderful producer. Extra fine stock of both varieties ready now. R. C., \$25 per 100; \$12.00 per 100; \$100.00 per 1000. Pot plants, \$3.00 per 100 extra.

Send for our catalog, now ready.

The H. Weber & Sons Co., Oakland, Md.

Cyclamen Giant Hybrids

Seed taken of exhibition stock the cream of my own strain. None better. 35,000 ready in 6 separate colors, including Salmonium, Papilio, Rococo and fringed varieties, once transplanted, \$2.50 per 100; \$22.50 per 1000; twice transplanted, \$3.50 per 100.

IMPATIENS HOLSTII one of the best varieties in years, being a continual blooming plant of scarlet flowers, excellent for pot culture as well as for bedding, sells on sight. 2 in., \$3.00 per 100; rooted cuttings, \$1.50 per 100. Try it, and you won't do without it.

HARDY PHLOX PANTHEON.

DREER'S HARDY PHLOX

— We offer in strong, field grown plants that were cut back early in the season and potted up into three inch pots, and which will give an abundance of blooms this season, much superior to young, newly propagated plants, such as are generally sent out in spring, the following list of choice varieties.

Bridesmaid. Pure white with large crimson eye.

Beranger. White, suffused pink, crimson eye.

Bouquet Fleuri. White, with deep rose eye, each individual truss a complete bouquet.

Champs Elysee. Fine rich purplish crimson.

Coquelicot. Bright orange scarlet, carmine eye. \$1.00 per dozen; \$8.00 per 100.

Colibri. White with deep rose centre.

Eclaireur. Purplish crimson with light halo, very large.

Esclarmonde. Lilac, mottled white, deep rose eye.

Eugene Danzenvillier. Lilac with white edge and centre.

F. G. von Lassburg. The finest white. \$2.00 per dozen; \$15.00 per 100.

Graf von Ungerer. Light rose, crimson eye.

Jeanne d'Arc. A fine late white.

La Soleil. Salmon rose with light centre.

M. Gladstone. Soft rose, large flower.

Marquis de St. Paul. Deep rose, overlaid salmon, crimson eye.

Moliere. Salmon rose, deep rose eye.

Mrs. Jenkins. A fine large pure white. \$1.25 per dozen; \$10.00 per 100.

Obergartner Wittig. Bright magenta with pure red eye.

Offenbach. Bright rose with large white halo.

Otto Thalacker. Magenta crimson.

P. Bonnetain. Salmon rose. 75 cents per dozen; \$6.00 per 100.

Pantheon. Deep salmon rose, free and effective.

Professor Schlieman. Bright lilac rose with carmine eye.

Pecheur d'Islande. Soft salmon red, with white centre.

Selma (new). Beautiful light rose pink with large aniline red eye. large flowers. \$2.00 per dozen; \$15.00 per 100.

Semiramis. Purplish magenta.

Sunshine. Deep salmon pink, with deep rose eye.

Simplon. White suffused with lilac and dark rose centre.

Price. Any of the above (except where noted), 75 cents per dozen; \$5.00 per 100; \$40.00 per 1000.

Phlox Subulata—Moss Pinks. Alba, Atropurpurea, Lilacina, Nelsoni, Rosea and Bridesmaid, strong field grown plants, 75c. per doz.; \$5.00 per 100; \$40.00 per 1000.

Special Surplus Offer of Roses.

White Maman Cochet, Pink Maman Cochet and Hermosa

Three of the best bedding Roses grown. We have a larger stock than we care to carry. These are strong field grown plants which were potted up during December into five inch pots, were stored in cold houses; they are now nicely rooted, making an excellent growth and in the best possible condition for the retail trade. We offer as long as the surplus lasts at \$2.00 per dozen; \$15.00 per 100; \$125.00 per 1000.

We are headquarters for Hardy Perennials, Pot Roses for out-door planting, Water Lilies, Decorative Greenhouse plants, all of these as well as a full line of seasonable florists' stock, which is fully described in our new Wholesale List issued April 1st, a copy of which will be sent to the trade only.

HENRY A. DREER, 714 Chestnut St., Philadelphia, Penna

NOVELTIES IN ROSES

The four magnificent novelties from Pernet-Ducher, viz.: Mme. Philippe Rivoire, Mme. Melanie Soupert, Mme. Jeannie Gillemot and Instituteur Sirdey,— these are four justly famed varieties from his celebrated strain.

Cherry Ripe from George Paul & Son,— this might be termed a dwarf American Beauty, a fine variety; Angelo Peluffo, Reine de Italy, two handsome additions from Soupert. Three new hybrid Rugosa roses from M. Gravereaux — these should prove unusually interesting for American gardens. Hugh Watson, Hugh Dickson, Gartenwalt, three promising H. P's, La Neige and Venus, two interesting novelties in the Moss section.

We will send 12 of these novelty introductions for \$5.00; or where 50 are taken, \$17.50; \$35.00 per hundred.

Our collection of novelty Chrysanthemums is the finest and most select of all in the United States; we are offering some unusually fine exhibition novelties not catalogued by any other firm in the country. We will select for any one 12 of the very finest novelties of the year for \$5.00, or one hundred for \$35.00.

Remember you can get Richmond roses from the originator by sending to us — price on plants or rooted cuttings on application.

400 plants of Polygonum Baldusianicum, one of the finest new plants, hardy, produces a wealth of white flowers. \$3.50 per dozen, strong plants.

Acrostichum and Platycerium

ACROSTICHUM LEPIDATUM

ACROSTICHUM (HYMENODIUM) CRINITUM
A. SQUAMOSUM A. LATIFOLIUM
A. VILLOSUM

ACROSTICHUM ON TREE FERN

These are not precisely plants for all-round decoration but are useful and effective when the curious forms of their fronds can be shown to advantage. They are certainly the two most interesting genera of the fern family, long, and in some places yet grown under the same generic name of *Acrostichum*. The spore-cases are set near together covering the entire under surface of the fertile fronds, or the upper leaflets of the once-divided fronds or in patches at the top of the fronds and sometimes on both sides of the three-times divided fertile fronds.

Most of them are epiphytical, growing on tree trunks or rocks. Some grow in loose soil, a few on the edge of salty creeks and some climb on trees, and when grown in conservatory in the manner they grow in nature, they are the most curious things to look at. Being nearly all tropical plants they like a warm and moist atmosphere.

If they can not be patched on old half-rotten tree trunks or dead fern trees the most picturesque way to grow them is in cork-bark baskets or simply against a piece of cork bark, like orchids, and hang them around on the conservatory walls or on a wire from the roof. They can be grown in pots too, but never grow as well. In all cases they want a mixture of good fibrous, rough peat, half-decomposed, chopped sphagnum and coarse sand. They do not want much soil, except a few, and when grown in pots, the pots should be half-filled with broken sandstone or bricks. The epiphytal species must be sparingly watered; better soak them once in a while and let them dry out between times. They are propagated by division, or, in *Platyceriums*, by young plants growing from adventitious shoots on the roots; can also be propagated by spores but are very slow to make plants of size.

The genus *acrostichum* contains over one hundred different species, classified in different sections after the form of their fronds, the way they are divided and after the way the spore masses cover the fertile fronds.

Acrostichum muscosum from West Indies and Central America has long entire narrow pendulous fronds of leathery texture, scaly underneath; the fronds are numerous and make nice bushy plants.

Acrostichum villosum from Mexico and West Indies is a dwarf prostrate species; the numerous entire fronds

about eight inches long, of a light green, are covered on both sides with brown hairy scales.

Acrostichum (Elaphoglossum) latifolium from West Indies and Central America, has entire fronds over one foot long and broad, pointed on both sides, long stalked, of a very hard texture, dark green and glossy; the fertile fronds are more narrow. There are a few other species much like that one with fronds larger, longer, or narrower.

Acrostichum (Elaphoglossum) lepidatum from tropical America and West Indies, has narrow, not very long, entire fronds covered on both sides with downy scales; the fertile fronds are larger and very narrow.

Acrostichum (Elaphoglossum) squamosum from West Indies is found also in the South Sea Islands; has long stalked entire fronds about one foot long and broad, covered on both sides with velvety silvery scales, brown at the edges; the fertile fronds are much longer and narrow. All the *elaphoglossum* are found growing on trees.

Acrostichum (Hymenodium) crinitum, the "elephant's ear fern," from West Indies, is a well-known, very interesting fern. The long oval shaped, entire, long-stalked fronds, of a thick spongy nature, are all covered with black hairy scales; the fertile fronds are of the same shape but smaller and contracted.

Acrostichum (Chrysodium) aureum and *lomarioides*, both from the West Indies, and all over the tropics, are also found in Florida where they grow in brackish swamps and on the edge of streams where the salt water tide comes in; they are the only ferns that grow near salt water. Both have once divided fronds that grow to a great dimension as high as ten feet and one foot broad. They look alike except in the fertile fronds: in *aureum* the spore masses cover the top leaflets and in *lomarioides* all the leaflets of the fertile fronds are covered and are narrow. Both ought to be grown in good sized pots and the pots standing half in water to get good growth.

Acrostichum (Stenochlæna) sorbifolium is another which has been found lately in Florida. It grows all over the tropics in both hemispheres. The once-divided fronds which are not very big, grow from a thick creeping stem to growing on trees, like ivy, to a great height.

Acrostichum (Olfersia) cervinum from West Indies and Central America. The fronds of this species are once-divided, two to three feet long, pendulous and

divided into long broad leaflets; the fertile fronds are twice-divided in narrow long leaflets; a good basket plant.

Acrostichum (*Soromanes*) *cœnopteris* from Mexico has the same fronds as the preceding, growing on woody, creeping root stocks. This and *A. sorbifolium* should be grown on old tree trunks.

Acrostichum (*Polystrophia*) *acuminatum* from Brazil has long-stalked fronds, once divided, the leaflets cut to the mid-ribs. The lower leaflets are longer and deeper cut than the upper; the fertile fronds are smaller, two and three times divided.

Acrostichum (*Polybotrya*) *osmundaceum* from Central America is another climbing fern. The pendulous fronds are very large and three times divided, of a dark green color; the fertile fronds are erect with very narrow divisions. In the natural state it covers whole tree trunks to a height of twenty feet.

Acrostichum (*Rhipidopteris*) *peltata* is a small-growing, creeping species from West Indies and Central America. The fronds are not four inches high and two broad, are round, divided and sub-divided into narrow strips; the fertile ones are round entire or slightly lobed. It likes to grow in a damp atmosphere.

Platyserium are the most interesting plants in the fern family, with their big round convex sterile fronds, not unlike an inside cabbage leaf, which in some species are deeply lobed, and their curious divided stag's-horn-like fertile ones. *P. Aethiopicum* (*stemmaria*) from West Africa with broad fertile fronds, *alcicorne* from Australia, the most common ones, *alcicorne majus* from South Asia, with nice erect fertile fronds, *biforme* from Malayan Peninsula with very long fronds, *Hillii* from North Australia and *Wallichii*, are the most showy. These with *Willinckii* from Java with three kinds of fronds and one or two of recent introduction are all that are in cultivation. In their native country they all grow on trees with no other soil than decayed matter. In greenhouses they grow best treated like epiphytical *acrostichum*, with little water at the roots.

The Deterioration of Varieties

Editor HORTICULTURE—My Dear Sir: The issue of HORTICULTURE for March third contains an article by N. B. White which has interested me greatly, and which has suggested to me some points whereon I think Mr. White is not quite clear.

In opening, he says, "we hear a great deal of late about natural forces propelling every living thing onward and upward toward more perfect conditions." To these two last words I take especial exception. Natural selection never undertook to bring "living things toward more perfect conditions," nor did it ever undertake to explain the origin of those changes which people dealing with the breeding of living things call "improvements and perfections." Nature and man have very different ideas as to what constitute "improvements and perfections." Natural selection does not work on the environment as suggested in "more perfect conditions" but upon the living thing itself, making it more fit to live in its environment. Natural selection is the name applied to that force in nature, which, by eliminating the unfit, leaves the fit to reproduce its kind, a race, improved in ability to cope with its natural en-

vironment and all the struggles that entails. Just here Mr. White seems confused; he is trying to make a natural law answer for artificial "improvements" and for conditions arising from artificial environments; and, forsooth, when the culture and care of that artificial environment are gone, he holds Dame Nature responsible because she does not keep up the creature she abhors, since man has bred it to the point where it could not fulfil the natural life of its kind under natural conditions. Life in nature has two ends and only two, the first, to procure food that the creature may attain maturity, thus enabled to fulfil its second end, the reproduction of its kind. What florist's flower could live that life? The carnation? The rose? Could Mr. Burbank's much vaunted spineless cactus withstand the terrors of the desert which its ancestors endured, and endured that it might live? In deducing such widespread conclusions as Mr. White's, care must be taken not to mix the facts and the law of the case. He has not observed planets or animals in a state of nature, or if he has, does not draw his illustrations from such observation, and so he can not state what they would do under such conditions. Does he consider that Baldwin apple trees in an orchard are in any way subject to the action of the law of natural selection? What struggle is there in that orchard for food, what chance is there that any bird can eat of that pulp fruit sufficient to swallow some of its seeds and carry them far afield thus giving the second generation opportunity to live its life, did he follow nature's method and raise his Baldwin apple trees from seed? What advantage is it to the Concord grape vine to bear bunches weighing two pounds and over? Can that enormous bunch produce more seeds? Are those that it does produce of greater vitality? Those are the only points of contact between real nature and her children. Such states of life are, as Mr. White says further on, evidences of weakness and unfit the product for a natural state. To narrow the question for convenience's sake and to suit the character of your journal, a plant must produce seeds, or it loses its sole *raison d'être* in nature's realm. Again, Mr. White does not take into consideration that nature reproduces almost exclusively by seeds, thus giving each succeeding generation an infusion of new blood and new inheritances; while man almost as exclusively makes his increase vegetatively by cuttings or grafting or some similar way, then, as he never selects his stock at all, reviles nature for his own shortcomings and their resultant failures and degeneration.

Again, I take exception to the statement that "the time will surely come when the inhabitants of this earth will be obliged to contend with products inferior to what we now have." Not unless these self same inhabitants batted upon the "improvements" wrought by their forebears settle back in slothful ease mentally and physically, as they show great danger of doing, and here should be sounded the note of warning.

The "elements of decay" mentioned in the last paragraph illustrate, as I have mentioned, my point from beginning to end. Man breeds for ends purely selfish, his own advancement, comfort and luxury, unmindful of aught but himself and his present; nature breeds for work, for life, for strength, for ability to fight well and to win.

Very truly yours,

Am. D. H. Am.

Dorrancton, Pa., March 17, 1906.

Clematis Davidiana

The clematis shown in the accompanying illustration has been grown as *C. Davidiana* in various places, among those having it under this name being Prof. Waugh of Amherst Agricultural College. Prof. Waugh writes concerning it, as follows:

"In Bailey's *Cyclopedia of American Horticulture* this clematis is given under the name of *C. heracleæfolia* var. *Davidiana*. I am not acquainted with the species type, nor very familiar with the other variety referred to it, viz., var. *stans*, but *Clematis Davidiana* as I have grown

it is a beautiful species. In fact I do not hesitate to say, without any reservation, that it is the best thing I have ever seen in this important group. The description adopted by Prof. Davis in the *Cyclopedia* is not satisfactory when compared with our specimen. Ours is considerably woody, a reasonable amount of the wood living through the winter. The plant is not erect, any more than *Clematis Jackmanni*. It grows more like *C. virona* or *C. crispa*, and resembles the latter perhaps more than any other species known to me. It can be trained up against a building or on a veranda with excellent effect. The flowers are very fragrant, in marked contrast to *C. paniculata*, for example, which has a rank and disagreeable smell. The flowers are borne profusely, are nearly an inch across, and are almost white, with just a faint suggestion of pale delft blue.

I have heard it said that the reason why this splendid clematis is not more commonly grown is that it is hard to propagate; but this has not proved true with us either. It propagates fairly easily from greenwood cuttings in an ordinary cutting bench. It seems perfectly hardy here, and I grew it for several years in Vermont where it did not winter-kill. I have wondered if my specimens were true to type, and have thought that perhaps I had something better than I was entitled to have under the name of *Clematis Davidiana*; but certainly this clematis is well worth anybody's time."

Jackson Dawson of the Arnold Arboretum has this to say regarding *Clematis Davidiana*: "*Clematis Davidiana* was first received at the Arboretum about eighteen years ago. Our first plants were from Gen. Woolson and were imported by him from abroad. As I understand it the plant is supposed to be a native of

China and was first introduced to European gardens about 1865. Our plant grows from two to three feet high and has light porcelain blue flowers in clusters, blooming nearly all the latter part of summer. It is not woody above ground with us but is what I call suffruticose having one or two inches of woody growth below the surface of the ground and it is by cutting up these underground stems that we have propagated it as I find the color changes considerably in the seedlings, being somewhat lighter blue than in the original plant. It is a fine addition to the herbaceous border.

"*Clematis tubulosa*, also a China species, has much darker flowers and less robust growth but is well worthy of cultivation. Included in this group is *Clematis stans* and *C. Lavallei*. The latter is of much more robust growth often growing five feet or more in height and covered with large clusters of drooping bell-shaped flowers of nearly pure white color with a delicious odor of hyacinths. It is the latest to flower of all the clematis family and, I think, is but little known to cultivation in this country though it has been in the Arboretum for twenty years. This scarcely ripens seed here but is perfectly hardy. *C. Davidiana*, on the contrary, ripens seed freely."

Lathyrus pubescens

LATHYRUS PUBESCENS, Hook. and Arn. in *Bot. of Beechy's voyage*, p. 21.

The genus *Lathyrus* belongs to the natural Order Leguminosae or Pulse family and according to Bentham and Hooker has about 100 species. They are distributed in many parts of the world, not only in temperate climates but also in high altitudes in the tropics. Most are of ornamental value and are worthy of cultivation. Their flowers are showy and in various colors. They are satisfied with any good garden soil, and their propagation can be made by dividing or seed.

Lathyrus pubescens, the downy South American lathyrus or everlasting pea is of fine quality, but it is doubtful if it will in the open ground stand our winters even if protected. It is not by any means a new perennial as was stated in *HORTICULTURE* No. 12, Vol. III, p. 367.

From *Botanical Magazine* t. 3996, Vol. XVI, London, 1843, I will cite the following quotation: "A hardy greenhouse plant, perhaps even able to bear cultivation in the open border. It is grown we believe, in several collections, and was introduced by Mr. Tweedie from Buenos Ayres; but whether it is found wild near that place or only in the interior of the Argentine province, does not appear. Mr. Baird gathered it on islands in the Parana. If, as I suspect, it be the same with the *L. acutifolius* of Vogel, it is also found in South Brazil. Dr. Gillies detected the plant about Mendoza, and it extends we know as far westward as Concepcion and Valparaiso on the shores of the Pacific. In general habit it is nearly allied to *L. nervosus* (Bot. Mag. t. 3987), the flowers being very similar, though the leaves are widely different. Trained in a pot, and placed in a cool greenhouse, it bears its large purplish blue flowers in May."

Carl Blomberg

Those Moth Pests

The \$250,000 appropriated by the Massachusetts legislature to exterminate the gypsy and brown-tail moths has called forth some comment from the people not residing in the stricken district. A visit to the infested region would quickly quiet all murmurings. No other town wants even a small share of either of the two worst insect pests that Massachusetts has ever known. The money so wisely set aside by the 1905 legislature is being spent in an endeavor to restrain the moths within their present limits.

In the case of the brown-tail moth this will not be wholly impossible if hearty co-operation is given by tenants, something now required by law. The brown-tails pass the winter in colonies of three hundred, in tight cocoons made from two or three leaves on the tips of the branches. Hence the winter treatment consists in the removal and burning of these nests.

The gypsy moths pass the winter in the egg stage. There are about 500 eggs in a cluster, mixed with hair from the female moth. The whole presents the appearance of a more or less oval pod about one inch in length and varying in color from yellow to a dirty white, according to the time of winter. Winter treatment consists in painting these egg masses with black creosote.

To my mind the ultimate relief from the gypsies will come with parasitic insects or disease, following the natural order of things, but until such aid does come, no stone must be left unturned to keep them in check by thorough winter treatment and summer spraying with concentrated arsenate of lead, such as Bowker's Disparene. Spraying combined with the conscientious pruning and burning of the nests will eventually head off the brown-tail moth.

The brown-tail is reported from Eastport, Maine, to Cape Cod, Mass., and one hundred miles west of Boston; the gypsy in a more restricted area in eastern Massachusetts, but accounts of their presence in new parts appear almost every day in the daily papers. A sharp look-out should be kept by every one for the characteristic nests and egg masses. If there is any doubt as to the nature of the contents forward it to your experiment station for identification. If you haven't it you don't want it, and if you do have it you want to find it out. It is a deal simpler to exterminate one colony on a restricted area than a hundred colonies dove-tailing one into another. Furthermore, do your best to secure the U. S. appropriation of \$275,000 to keep them where they are, even if you don't live in the infested area, otherwise you may have that questionable pleasure.

Many of the towns have made good headway already this winter. The trees all over the moth country show numerous black patches like fire burns, evidence of treatment of gypsy egg masses. Gangs of men are out collecting and destroying the brown-tail moth nests. Incidentally many neglected trees are receiving a much needed renovating, and ill-kempt wood lots are being cleared of the mass of worthless brush that accumulates. "It is an ill wind that blows nobody good."

R. L. Adams.

British Horticulture

SUCCESSFUL DAHLIA RAISERS

In recent years Messrs. J. Strednick and Son have distinguished themselves as raisers and exhibitors of dahlias. Amongst their show triumphs last year was the winning for the third time in succession of the champion challenge trophy offered by the National Dahlia Society. The first new introduction brought out was Harry Strednick, which was distributed about ten years ago. This was followed in 1898 by Night, one of the daintiest blooms in commerce. Subsequent introductions, which are now in many cases popular with exhibitors, were Magnificent, Uncle Tom, Major Weston, Mayor Tuppenney, Lord Roberts, J. Weir Fife, Alpha, Geo. Gordon, Mrs. J. W. Wilkinson, Ella Kraemar, J. A. Riding, etc. The firm's latest introductions are William Marshall, a rich orange with bright yellow in the centre; Mrs. Macmillan, white in centre, deepening to a beautiful pink at the tips; Victorian, pinkish white, speckled with deep crimson and purple; Primrose, light sulphur yellow; Star, bright bronze and yellow, etc. Tom Tit is a pompous cactus variety of neat and attractive form. It produces even when fully grown, diminutive flowers, but perfect exhibition specimens of the cactus type. The tint is mauvy-pink. The flower received a certificate when exhibited last year.

THE METHODS ADOPTED

In Messrs. Strednick's trial ground there will be about 800 plants set out this year. This ground is planted from top to bottom, five feet apart, and four feet in the row, eight plants in a row. The seedlings are planted in May after the ground has been thoroughly prepared and manured. They plant out the first week in June. The busiest time in sending out orders is from the middle of April until June. Mr. Strednick was asked the other day whether the cactus dahlia had increased in popularity. "Every year," he replied, "whilst the others diminish except in the United States where quantities of doubles are brought. The colonies and growers in Europe greatly prefer the newer cactus. We sent a large box of bulbs to Tokio by the last ship which went through the Suez Canal before the late war." Questioned as to the secret of their success Mr. Strednick answered that energy and perseverance are the chief factors. The actual cultivation of the plants, such as watering, thinning, and tying is done by Mr. Strednick and his son.

ORANGE CULTURE

Messrs. T. Rivers and Son at a recent meeting of the Royal Horticultural Society showed what can be done in the way of orange and lemon growing in this country. The Long Orange, Seville, Malta Oval, Malta Blood, Citrus corniculata, Egg Orange, and St. Michael's, were included, as well as the Bijou Lemon, White Lemon, Sweet Lime, Citron and Shaddock. Visitors to the nursery in March were able to see the orangery in its most attractive garb, the evergreen leaves and golden fruit making a charming contrast. It is surprising that more attention is not given to this subject in England, seeing that it affords such a welcome ornamentation to the conservatories in the dull days of winter. Oranges can be as easily grown as grapes, an essential factor being the provision of a lofty house with plenty of light and ventilation. Messrs. Rivers have several houses set apart for the raising and

general culture of oranges. At Sawbridgeworth the orange is worked upon the lemon as a stock, the latter being raised from pips. A number of seedling lemons are raised each year. After a couple of years' growth these are ready for grafting. Quantities of trees are sent out each year, the firm's customers including colonial growers. There are over 1000 orange trees in two large houses at the nurseries which are famous for other kinds of fruit, several well known introductions having emanated from here.

A RECORD ORCHID PRICE

Orchardists from far and near were recently attracted to the sale of a portion of the collection of orchids belonging to Mr. H. T. Pitt, of Rosslyn, Stamford Hill. The most valuable item was *Odontoglossum crispum* Pittianum. The plant was collected by Mr. J. Carder, and first flowered in Mr. Rochford's nurseries. On coming into the possession of Mr. Pitt it was exhibited in May, 1900, and received from the Royal Horticultural Society a first-class certificate. It was also exhibited at Manchester where it received a gold medal. A. J. Chapman, in his well known work on orchids describes it as "one of the finest varieties in cultivation." After a brisk bidding the lot was knocked down salesroom prices. This established a record as regards saleroom prices. Included in the sale was a *F. K. Sander* which realized 800 guineas, whilst others fetched from 300 to 470 guineas each. The aggregate obtained was 5,342 pounds—a satisfactory morning's work for Messrs. Protheroe & Morris, the auctioneers. A second day's sale produced £3,974, indicating that the orchid trade is still "booming" in Britain.

W. H. Aclsett.

London, Eng., March 31, 1906.

Primulas

Primula is an extensive genus of small and desirable plants. All the species of primrose increase readily by seeds, or by dividing the plants, which should be done as soon as they have flowered. However, in treating *Primula sinensis* I do not reproduce them by division, but by sowing the seeds early in April, as better plants can be procured by this method. A light soil is preferable in which to sow the seeds of this particular plant, equal parts of loam, leaf mould and sand. It is also highly essential that the pan or pot in which they are sown should be well drained and watered thoroughly before sowing the seeds, which in turn should be but lightly covered, placing them in a temperature of 60 degrees until germination has taken place, afterward removing them to a cooler situation, say about 50 degrees.

When the plants have formed 2 or 3 leaves they should be removed from the seed pan and potted singly into 2 1-2-inch pots, using similar material to that in which they were sown. Care should be taken at this stage not to expose them to undue sunlight for a few days, or until they become established. Plenty of air at all times will add vigor and prove beneficial to the plants. Repot into 4-inch and ultimately into 6 and 7-inch pots, as the plants require, with soil containing less leaf mould, and more manure; decomposed cow manure is perhaps best for this purpose.

During the hot months of summer the plant may be advantageously placed in a frame or lean-to facing north and shaded during strong sun. As the sun declines and becomes less powerful late in the afternoon the shading may be removed. When the nights become cool in September the plants should be removed to the greenhouse and grown in a temperature of 45 to 50 deg. and syringed daily during bright weather. When the pots become filled with roots, liquid manure should be given once a week and a dressing of bone flour occasionally. Primulas are not so susceptible to insect pests as are some other plants, but it is well to place tobacco stems between the plants as a preventive.

George Morrison

Fuchsias at the Spring Show, Philadelphia.

William Robertson, gardener to John W. Pepper, took first premium for three fuchsias. These were well grown specimens, trained as standards and the variety was old *speciosa*, which is the best variety to be had at this time of year. The fuchsia lends itself admirably to being grown as a standard and plants two or more years old come more naturally as standards.

The second prize was awarded to Fred Huggler, gardener for Geo. Vaux, and these were grown as dwarf standards evidently two years old—or rather were being grown the second year from the cutting. This variety was unknown to me nor was it labelled. It resembled the old *Elegans* or, by some called *Charming*, but I did not know it bloomed thus early. 'Tis a pity there are not more varieties to be had in bloom at this season of the year. We have depended entirely too much upon Europe for our new varieties of fuchsias, where they do so satisfactorily all summer long, while in this climate they do not thrive during the heated term.

Here is an opportunity to experiment in raising a new race of early-blooming varieties suitable to this climate, which, there is no doubt, could be done by systematic and well directed effort. *Speciosa* would possibly be a useful parent with that end in view. The variety *Mrs. Geo. Rundle* is now in bloom here, so also is *Arabella* and *Gustave Nadand*, so that by using these early flowers for pollenizing and by carefully selecting the resultant offspring, success seems assured, especially when Luther Burbank in a recent number of "The Youth's Companion" says that "We have learned that plants are as plastic in our hands as clay in the hands of the potter." I wonder whether the potter has to make 60,000 pots before he gets one to suit him, as it is said Burbank did when he rejected 59,999 blackberries before he found the one he afterwards named *Iceberg*. I do not believe that the raising of improved varieties of plants from seed by cross-fertilization and selection is so easy as it is for a potter to make pots from clay, especially flower pots, but don't let that deter us from making an effort to raise new and improved early-flowering varieties of fuchsia. Let's get to work.

WM. J. STEWART, Editor and Manager.

Ready for
the next crop

Easter week is a hustling time for the plant grower to whom the duty of refilling the vacant space after the Easter material has been marketed is second in importance only to the disposal of the Easter stock. What crop shall be selected to follow is a question dependent largely upon local circumstances, but the course, whatever it may be, must have been mapped out well in advance and there is no more convincing evidence of the intelligent and prudent grower than that he be fully prepared to put his houses at work again without a day's delay, as soon as they shall have been emptied.

Of interest
to rose growers

We confess to having a certain aversion to retrospective addresses on trade and professional topics. It is usually an indication of decadence and of waning interest in living issues when a man or an organization or a paper gets into the habit of this sort of literature, unless the rehearsal is made use of to illustrate a timely argument or point the way for present and future enterprise. The paper on roses by Benjamin Dorrance which appears on another page of this issue is admirable in possessing the latter quality. It is well calculated to set people a thinking, which should be the primary aim of such a paper. We hope our rose-growing readers will peruse it and shall welcome any communications which they may send to us touching on the questions propounded by Mr. Dorrance.

Spare the
native flowers

While the fever is on for teaching the public school children what they should do, horticulturally, it will not be out of place to teach them also some things they should not do. Many of the beautiful wild plants once so abundant are fast becoming extinct and one of the causes of their disappearance is the wholesale gathering of too flowers, which puts an end to their reproduction from seed, and as a species thus becomes scarce it is easy to pick every one in sight becomes more and more precious. It has been estimated

that there are now about six hundred foreign wild plants which have been brought to this country in various ways and the coarse and unattractive ones are rapidly spreading and usurping the place of the pretty species that have been so ruthlessly destroyed. Children—and grown people, too—should be instructed as to such things as *Cypripedium acaule*, fringed gentian, etc., that the persistent gathering of all the flowers that appear will soon exterminate the species in a given locality.

Back to the
country life

The nursery business in hardy ornamental trees, shrubs and border perennials is enjoying a period of unprecedented prosperity and the signs of the times are that this is only a beginning. Never before has there been a spring when the attention of the people has been so concentrated on the pleasures of rural and suburban life and the comforts of a home with grounds tastefully adorned. The awakening, for a time localized in the extreme eastern section of our country, has now spread over the entire land. Communities are demanding public parks; men of wealth and leisure are taking up large tracts, erecting villas and stately conservatories; less conspicuous but equally enthusiastic is the sentiment among the humbler classes; on all sides the people are calling for a better knowledge regarding selection, planting and care of the things that go to make beautiful home surroundings. Paralleling the impulse thus given to the ornamental nursery trade the landscape gardeners' profession has already developed into one of the most promising and lucrative a young man can take up, and its future magnitude can hardly be over-estimated.

The right spirit
in emulation

The communication from one of our correspondents in this issue criticising the work of the judges in the late exhibition of the Massachusetts Horticultural Society and the American Rose Society, opens up an old subject upon which very decided opinions have often been expressed. Mr. McFarland voices an admirable sentiment when he says that he prefers some award which carries with it a recognition of cultural excellence above any sum of money that may be given an exhibitor. This is the true competitive quality which, we believe, is much more general among gardeners and florists than is realized. On one point, however, we take issue with the complainant. We do not like to see "a bad loser." All societies confer on their exhibition judges the right to withhold first, second or any other prize from any exhibit not deemed worthy thereof, and this is just as it should be. We think that when an exhibitor, knowing who the judges are to be, submits his product to those gentlemen, in competition for their verdict, he should accept their decision with equal good grace whether it be an honor or a reverse. And this applies without distinction to the large and the small exhibitor alike.

AFTER ADJOURNMENT.

Rather a far-fetched conceit, that of an advertiser in one of our contemporaries using the picture of a rooster of a breed not over 35 years in existence, in illustration of an occurrence 1906 years ago.

At a meeting of the fire department captains of Worcester, Mass., one day last week, to take suitable action on the death of one of their associates, it was decided to send to the funeral a floral "set piece" in the shape of a fire alarm box! Somewhat suggestive?

The agitation against "the 11 o'clock closing law," which has been going on in Boston ever since the carnation convention, has resulted in a vote in the House substituting midnight for 11 o'clock. Now bring on your conventions.

We learn from a New York daily paper dispatch that the steamship Bermudian, which arrived on April 7, brought over 5000 Easter lilies from Bermuda's fields, together with several hundred boxes of violets, and that "the consignment was practically sold before it arrived." So far as the violets are concerned, probably that was the best time to sell them! The game of "sight unseen" is not unknown to school-boys. It is presumed to teach wisdom.

AN EXHIBITOR'S GRIEVANCE.

In looking over the issue of HORTICULTURE March 31, 1906, I came across an article entitled "Explaining the Absence of the Small Exhibitor." It appears to me that the inducement held out to the small grower was all that anyone could wish, both in the horticultural schedule and also in the American Rose Society schedule had they lived up to them, but when they do not live up to their schedule you must not expect to have the small grower continue to exhibit. One thing to be remembered is that all roses are not expected to be as long-stemmed as Beauties or as fine as Liberties or Richmonds, but they may be as good in their class and should be considered in that light.

I am speaking from the fact that I staged two separate roses of Brunner's, one in the American Rose Society and one in the Horticultural Society, and neither of them received a first prize, although the best in the hall. On Friday morning, the opening morning of the show, one of the leading retailers of Boston tried to buy these two dozen Brunners from me at \$6 per doz., which I refused on the strength of my wishing to help out the show. Now, when a man shows two dozen roses with a wholesale value of \$12 and spends three half days attending the show and replacing them once or more during the exhibition, it does not appeal to me as a business proposition, although had I received first prize cards for both I would have been better pleased then to get second prize in money. Furthermore, I would state that I also had on exhibition a fine vase of lily of the valley, for which, had I taken it to any retailer in the city, I could have received \$5 for same, but on Monday morning after the show was over I found I had received a gratuity of the sum of \$1. In

my mind I should have received a card of superior culture or something of that nature which would not have cost the society over five cents and at the same time would have been a source of much pleasure to me. The only thing that I can see for the small grower to do is to stay away until such time as he can be treated in a proper way. If they cannot afford to pay \$10 for a first prize of Brunner roses, then place it at \$5, and give us a first prize card.

JOHN MCFARLAND.

PERSONAL.

H. Bayersdorfer, of Philadelphia, starts on his annual pilgrimage to Europe next week.

Frederick William Smith, of Norwich, Conn., and Beatrice Frances Prentice were married on April 3, in Jewett City.

The Rhode Island College of Agricultural and Mechanical Arts has selected Prof. Howard Edwards of the Michigan Agricultural College, to succeed Prof. Butterfield.

I. Leroy Richardson has taken a position with William Nicholson, of Framingham, Mass., and Chester M. Carter succeeds to his position with George R. Simonds at Barre, Mass.

E. J. Harmon, of Portland, Me., was taken suddenly ill at his store last week, and a report that he had dropped dead gained circulation. It was a case of overwork. He was taken to his home and improvement was soon apparent.

Roswell F. Brooks, formerly with Charles J. Jones, of Cincinnati, but now connected with the water works department of that city, and Miss Grace M. Belser, well known as chief clerk at the Walnut Hills Floral Bazaar, were united in marriage, Tuesday, April 3.

TOLEDO NOTES.

The Perennial Gardens Co., the new concern which was lately incorporated, expect soon to organize, after which they will start without delay and get their property in shape.

We have had a week of fine spring weather, and the seed stores are filled with customers all day long. The mail trade has considerably improved, and orders cannot be filled as fast as they come in.

A visit to our largest establishments is rather disappointing, considering that Easter is before our door, and comparing the looks of eastern greenhouse plants at such a time, eight days away from this important festival, it impresses us that little preparation has been made to meet a large demand unless big orders go to outside houses. Six hundred lilies is the biggest lot to be found in the largest place, and azaleas, hydrangeas, cinerarias, spiræas are in proportion. Bulbous stock can be found in moderate quantities in every place, and prices are so as to suit every pocket-book. Krueger Bros.' place is a treat to visit. I doubt if better carnations, as we see them in their new range, can be found anywhere. A fine lot of antirrhinum may be found at George Hunt's.

SCHILLER.

WHOLESOME CHESTNUTS.

Look all over your seed closet in case you overlooked anything. Some very regrettable omissions come about through non-observance of seed packets at the proper time.

Did you ever try Crimson Ramblers in a large bed, bending the flowering shoots down over wires stretched at intervals over the bed about eighteen inches from the ground? What a gorgeous show Ramblers make planted in that way!

If you are in doubt about geraniums flowering in a somewhat shady situation, and it is imperative to plant something of a bright showy nature, try begonias of the Vernon type. They have been known to do exceedingly well in situations partially shaded.

It is time to prune all out-door roses that require pruning. Roses are not supposed to be pruned to make them look even all over, as some would seem to think. Prune them for the purpose of getting large flowers, many flowers, or both. Cut out all dead and weak wood and use discretion in cutting the other wood back.

Nicotianas succeed best when grown cool, and it is a good plan to pinch them before planting out. Don't go back on our friend Nicotiana Sanderae of last year in anticipation of abnormal results from the new ones. These will no doubt turn out all right, but there was nothing at all the matter with last year's novelty to warrant its being discarded this year.

Don't forget to give fruit trees one more spraying before the fruit buds open; it may seem a little irksome at the time, but the recollection thereof, when a good crop of unblemished fruit is being harvested, will be sweet, as against what a recollection of hesitancy ending in neglect of the precaution will be when at time of harvest there will be no fruit to gather.

Plant lettuce, cabbage, and cauliflower for early use as soon as danger of frost is over. Sow onions, radish, peas, and carrots as soon as possible. Sow sweet peas without delay; don't be afraid to put enough soil over the seed at first. I think that method is fully as good as covering by installments, because more roots are made before the peas appear on the surface. Put geraniums and most other kinds of bedding plants except soft things, such as coleuses, set out into cold frames to harden before planting.

Get to work on dahlias by whichever method you elect to propagate. If by cuttings, take care they are not too kindly treated in the way of heat. Let them have a gentle heat from below and keep them cool above ground. Take only short-jointed cuttings and those with a heel whenever possible. When only slightly more than calloused put them in small pots, shading them for not more than two days, unless by flagging they should need further covering. Start tuberous begonias slowly into growth by putting the bulbs in flats or pots and placing them on a bench. Water sparingly until they show signs of growth.

NEWS OF THE CLUBS AND SOCIETIES.

NEW YORK FLORISTS' CLUB.

Monday, April 9, the regular meeting date for April, was one of the stormiest nights of the season, yet there were fifty members present to greet Benj. Dorrance and listen to his able and interesting paper on Roses. In the absence of the president, Vice-President Pepper presided. At the conclusion of Mr. Dorrance's address, interesting remarks on the subject of roses were made by Robert Simpson, president-elect, and F. R. Pierson, vice-president-elect of the American Rose Society, and earnest appeals on behalf of this society were made, urging that a wider interest and more general membership be secured.

Resolutions were presented on the death of Ralph Moore and Fred Boulton. Five new members were accepted. Mr. Barrows of Whitman, Mass., was a visitor. The death of August Rhotert was announced. Following is a list of the exhibits, with the comments of the exhibition committee:

John N. May, Summit, N. J., showed Richmond, Mme. Abel Chateau and Killarney; highly commended.

Minneapolis Floral Co., Minneapolis, Minn., Miss Kate Moulton. A vote of thanks. The committee did not feel justified in scoring this variety in the condition exhibited, owing to the distance shipped.

John H. Taylor, Bayside, L. I., Bride, Bridesmaid and Liberty; highly commended.

Robert Simpson, Clifton, N. J., Uncle John, Chateau, Golden Gate and Richmond; cultural certificate.

Lager & Hurrell, Summit, N. J., three plants of *Cattleya Schroderae* in variety; highly commended. Two of the types are very fine.

H. H. Barrows & Sons, Whitman, Mass., *Nephrolepis Whitmanii*; certificate of merit. *Asparagus Crawshawii*; honorable mention.

H. R. Carlton, Willoughby, O., Governor Herrick violet; vote of thanks. Committee would like to see it again.

THE NEW JERSEY FLORICULTURAL SOCIETY.

The regular monthly meeting of this society was held on April 6 at their rooms in Orange. The topic for the evening was "The English Landscape," illustrated by colored slides, with brief descriptions by the secretary. The floral portion of the evening embraced all the season's flowers—roses from the hands of Peter Duff, George von Qualen and William Phillips; carnations from William Reid, George Oakley and Max Sheider; orchids from Lager and Hurrell, Julius Roehrs Company and Arthur Bodwell; besides spiraea, antirrhinum, cineraria and bulbs. A bryophyllum in full bloom was one of the attractions from A. Bodwell.

A proffered prize of \$10 for the best three displays of vegetables for the season from Vaughan's seed store was accepted with the thanks of the society.

A proposition from Mr. David Pierson for the society to assume the decoration of a float in the forthcoming parade in June was accepted by the society.

E. B. DAVIS.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

In accordance with the instructions voted at the convention in Washington last August, the secretary will, under the supervision of the executive board, proceed to prepare a "badge book" containing the names of members, numbered, and will issue correspondingly numbered badges to those whose dues for 1906 are paid to June 1. Members in arrears for current year's dues as well as all persons intending to take out membership this year are earnestly requested to remit now. There is no advantage in waiting until the convention meets, as the fiscal year begins on January 1st and payments made at any date during the year cover the interim until December 31st only.

WM. J. STEWART, Secretary.
11 Hamilton Place, Boston, Mass.

The Outdoor Exhibition at Dayton.

Circulars and entry sheets are being sent out this week to all nurserymen and others dealing in outdoor-planting material, tender or hardy. Plans of the beds as laid out are in the secretary's office and all information not given in the printed circulars will be cheerfully furnished by the secretary to all inquirers.

It is desirable that all planting be completed by May first, if possible, and the necessity for prompt response is urged upon all intending exhibitors. The fair grounds, where the beds are to be laid out, is city property, used for many public affairs, and is contiguous to the works of the National Cash Register Company. As soon as planted, the advertising label of each owner will be placed on the groups and same will be cared for all through the summer till the S. A. F. Convention meets in August. Many thousands of tourists and local visitors will inspect the plantings, and the opportunity thus provided dealers in conifers, shrubs and ornamental trees, herbaceous plants, summer bulbs, roots and bedding plants, for widespread and effective public advertising has never been equalled. Dayton is well-known as one of the most advanced communities in this country in the matter of adornment of streets and public and private grounds. A goodly number of applications for space for cannas, roses, phloxes, asters and evergreens are already filed with the secretary. For further information address WM. J. STEWART, Secretary, 11 Hamilton Place, Boston, Mass.

LENOX HORTICULTURAL SOCIETY.

The regular meeting of this Lenox society was held in their rooms Saturday, April 7th, President S. Carlquist in the chair. The principal topic of the evening was potatoes. An offer of \$25 was received from A. T. Bodington, and one of \$18 from Vaughan's Seed Store, to be used for prizes at the chrysanthemum show. W. J. & M. S. Vesey, Fort Wayne, Ind., were awarded a first class certificate for an excellent vase of carnation Glendale. GEO FOULSHAM, Sec.

DETROIT FLORISTS' CLUB.

A most successful flower show was held in connection with the meeting of this club on April 4, at the Michigan Cut Flower Exchange. Mr. Dilger's arrangement of the exhibits was very fine. Many well-known growers responded with superb displays. Prizes were awarded as follows: J. Stahlen for carnations; B. Schroeter for rose-pink Enchantress; Thomas Brown for carnations; Gus. Taepke for plants; A. Ferguson for plants; J. Breitmeyer's Sons for La Detroit and La France; R. Klagge for carnations; F. R. Pierson Co. for Lawson and Winsor and ferns; H. Weber & Sons for Jessica and My Maryland; W. J. & M. S. Vesey for Glendale; J. D. Thompson Carnation Co for Robert Craig. The varieties in each of these exhibits were seen at their very best. Two elegantissima ferns donated by F. R. Pierson Co. were sold, as per instructions, for the benefit of the club, and brought a high price.

Other prominent exhibits were Boston Market carnation from James Taylor; Glendale from Chicago Carnation Co.; antirrhinums, callas and spring flowering bulbs from Robert Klagge; large collection of roses, carnations and antirrhinums from J. Breitmeyer's Sons; collection of carnations and antirrhinums from F. Pautke; rose Miss Kate Moulton from Minneapolis Floral Co.; Easter plants from Mr. Ferguson; carnations from Thomas Brown; carnations from J. Stahlen; Easter plants from G. Taepke; sweet peas, pansies and a cement bench from A. Von Bolslager.

NASSAU CO. (N. Y.) HORTICULTURAL SOCIETY.

The regular monthly meeting of this society was held on the 4th inst. at the usual place, President Harrison occupying the chair. During the winter months the society met at 3.30 p. m., but from May till further notice, 7 p. m. will be the hour of meeting. It was decided to hold the coming fall exhibition on October 31st and Nov. 1st.

The fountain pen prize given by B. G. Davis, "Glen Cove Echo" for 12 best mixed carnations arranged for effect was won by W. Eccles, Oyster Bay.

The exhibit of cut flowers, plants, and vegetables was large and varied. Felix Mense, staged a nice table of cut flowers and plants including *Lilium longiflorum*, azaleas, rhododendrons, deutzias, begonias, *Cineraria stellata*, vases of hyacinths, carnations, roses and narcissi. Alex Mackenzie had fine plants of *Cineraria stellata*, rose Capt. Hayward, and pelargoniums; also cut flowers of sweet peas, carnations, and gardenias. H. F. Mezer's table included some nice forced lilacs in pots; pansies, carnations, roses, and snapdragons, also some well shaped heads of cauliflower. S. Trepass showed good cauliflower and cucumbers; likewise plants of *Primula obconica*, *Cineraria hybrida*, *Lilium longiflorum*, cyclamen, calceolaria, and azaleas; also vases of mixed carnations and some beautiful spikes of antirrhinum. J. Harrison had an interesting

lot of greenhouse grown vegetables including beet, asparagus, snap beans, carrots, rhubarb, cauliflower, tomatoes and mushrooms. W. Eccles showed a mixed vase of well grown carnations. J. H. Troy, New Rochelle, was present and made some appropriate remarks.

JOHN S. JOHNSTON.

NEW BEDFORD HORTICULTURAL SOCIETY.

At the regular meeting of this society, held on Monday evening, April 9, it was decided to hold a free rose show in June. Mr. W. N. Craig, of North Easton, gave a very interesting address upon the growing of annuals and perennials. Although Mr. Craig is an eloquent speaker, the gardener, which is a hereditary trait in his family and promises to be for another generation at least, asserted itself. He regarded the sweet pea superior to the dahlia, of which the New Bedfordites are so passionately enamored; recommended liberal treatment in the way of manure and watering; making the rows one foot wide, and the thinning of the plants to 4 or 5 inches apart; he advocated the growing of sweet peas and nasturtiums in separate colors. *Narcissus poeticus* was suggested for margins of lakes and damp places, and Darwin tulip for late flowering. He assured his hearers that they might expect an influx of very desirable novelties from Western China. A very helpful discussion followed, and the meeting closed with a vote of thanks to Mr. Craig.

T. WHITE.

COLUMBUS FLORISTS' CLUB.

Tuesday evening, April 3rd, the regular meeting of this club was held with President Stevens in the chair. The attendance was good and the meeting a long one, as many matters of importance needed attention. Two active members were admitted. The club was very much annoyed by a communication which Secretary McKellar read from the Board of Education, stating that the penny packets of flower and vegetable seeds which our club had been putting up for the school children of this city, could not be delivered by the teachers as planned. For some unknown reason the Board of Education have taken a stand against the school garden movement. The club chose a committee consisting of Messrs. Woodrow, McKellar and Faxon to meet the Board of Education and fully investigate the matter. Another very important subject brought up was the coming chrysanthemum show. Last season it proved such a success that we are encouraged to have another in November. The bowling club has been formed and already practice games have been rolled on the Y. M. C. A. alleys. The next meeting will be Tuesday evening, April 17th.

CLUBS AND SOCIETY NOTES.

The Kentucky Society of Florists held its regular monthly meeting Tuesday at the store of Jacob Schulz, Louisville.

At the meeting of the New London County Horticultural Society in Norwich, Conn., on April 9, J. W. Duncan of the Metropolitan Park System, Boston, delivered an address on Herbaceous Planting.

OBITUARY.

Thomas Devoy.

A sterling old gardener has passed away, and many loving friends mourn. Thomas Devoy had all the noble qualities and all the attainments that go to make up the typical old-time gardener. His death occurred at Poughkeepsie, N. Y., on March 29, after a long period of feeble health, at the age of 74 years.

Mr. Devoy was born in Ireland, and when but fourteen years of age was apprenticed to learn the gardener's occupation. After a five years' service he came to this country and entered the employ of M. Pease, at Brooklyn, N. Y.

In 1856 he went to Poughkeepsie to take charge of the greenhouse and garden of Matthew Vassar, at Spring-side, which position he resigned to take an engagement with Professor Samuel F. B. Morse, and here he remained for 38 years, until Professor Morse's death. To his skill and good taste the beautiful place of Professor Morse was largely due.

Mr. Devoy won many honors and trophies at various exhibitions during his engagement with the Morse family, and later when in business for himself, having established a commercial florist's business with his son on Worrall avenue, Poughkeepsie, in 1884, where he was engaged at the time of his death.

He is survived by one son, Peter Thomas Devoy, and two daughters. The funeral services were held Monday morning at St. Mary's Church, the pall-bearers being Conrad Gindra, George Burgevine of Kingston, W. G. Salford, Thomas Lynch, Charles Schaumberg and John Sloan.

August Rhotert.

August Rhotert, who has been doing business at 26 Barclay street, New York, for a number of years, died Monday, April 9, in his 46th year, at his late residence, 235 West 131st street, New York. A widow, mother, and two brothers, in Germany, survive him.

Mr. Rhotert represented many important European firms, among which are Vilmorin, Andrieux & Co., Louis Leroy, E. Neubert and others.

He was a man of unusual business

ability; very prompt, exact and painstaking in all he did. He amassed a fortune in his business and fortunate financial investments. He has been in precarious health for several months.

Andrew Nixon.

Andrew Nixon, for many years in business on upper Fulton street, Brooklyn, N. Y., died on March 31, at his home, 47 Madison street, of pneumonia. He was born in Ireland, Oct. 11, 1863.

Caleb H. Parker.

Caleb H. Parker, of Campello, Mass., who have been identified with gardening interests for many years, died on April 3, aged 87.

PUBLICATIONS RECEIVED.

Bulletin No. 274 of the New York Agricultural Experiment Station, Geneva, N. Y., is the directors' report for 1905. It is a very interesting document and clearly indicates the practical character of the work being done at Geneva and its great value to the agricultural and horticultural industries of the Empire State. It is stated that the total mailing list is now 39,280, over 3000 names having been added since January 1, 1905. The station maintains in numerous places in the State, experiments having for their object the determination of the applicability of certain methods to agricultural practice.

Part II, Eighteenth annual report of the Agricultural Experiment Station at Kingston, R. I., is received. It is a volume of 364 pages, containing several illustrations. Among the special papers published are: "The Effect of Postponing the Ammonium-Citrate Treatment of the Water-Insoluble Portion of Fertilizers," by B. L. Hartwell and J. W. Kellogg; "The Use of Acetic and of Oxalic Acid for Extracting the Charred Material in Preparing Ash," by the same authors; "The Effect of Liming Upon Certain Constituents of a Soil," by the same authors; "The Causes of Unproductivity in a Rhode Island Soil," by H. J. Wheeler and Jas. F. Breazeale. The report of the horticultural division by F. W. Card and M. A. Blake deals comprehensively with present day problems.

The first annual report of the superintendent for suppressing the gypsy and brown-tail moth in Massachusetts, by A. H. Kirkland, contains a statement of the results accomplished to date, together with a record of expenditures and certain recommendations bearing on the future needs of the work. The investigations of the season have shown that the whole of Essex county, over one-half of Middlesex county, half of Norfolk county, and practically the entire county of Plymouth, a total of 2224 square miles, are now infested by the gypsy moth, whereas, in 1900, the area occupied was 359 square miles. Automobiles are found to be important factors in the distribution. The brown-tail moth has in eight years' time become disseminated along the entire eastern territory of New England, its ability for rapid flying being mainly responsible. The book contains 168 pages, and is embellished with numerous striking half-tone views.

ROSES

A Paper Read Before the New York Florists' Club by Benjamin Dorrance.

When I received the invitation from Mr. O'Mara to write a paper on the Rose I was in Egypt and it was only after a good deal of hesitation that I thought best to accept. I regret that my want of knowledge must be so much in evidence; to talk to practical men, thoroughly up on the subject as you are, I confess, is most embarrassing; to only relate a part of my experience and trust that you will forgive the presumption when I tell you of my reasons for accepting. Primarily I am under obligations to many members of the New York Florists' Club both on the grounds of friendship and of customers, whom I value highly. Then, when a member of the firm of Peter Henderson & Co. asks me to do anything I feel that I owe it to the memory of the respected founder of that establishment to do whatever I can, no matter how poorly, to advance the Rose, since he, now so long gone but not forgotten, was the chief instrument in turning a poor blind lawyer from the path he had trod to the sweeter, pleasanter, brighter, path of a rose grower. Well do I remember the day when it was announced to me by an occultist that if I wished to be able to see the sweet light of day and nature's beauties I must absolutely give up my profession. Not feeling at the best, as you can understand, I strolled down Cortlandt Street and stopping in to see Mr. Henderson, received a kind invitation to visit the Jersey City establishment. It is but as yesterday that we walked through the houses and he so kindly showed me the methods he found best for treatment of the various plants and naturally we talked of my loss. He said to me, "you have the land and cheap fuel, why don't you try rose growing? Go over to John Henderson's at Flushing and see what he is doing." And I did. Now to this advice I owe whatever of success I may have made in the work and it is little I can do to repay and, as I have said, I felt it a duty to say yes, let this be my apology.

It was about 1882 that I first gave my attention to rose growing, and to-day when Bon Silene, Souvenir d'un Ami, Sprunt, Mermet and the other nearly forgotten roses of the past are mentioned it takes me back to the days when I struggled to get some slight return for the efforts I put forth to learn why Perle would not open and why Niphetos preferred to bow its head to mother earth. Then Cornelia Cook stood peer of all the whites, with her long, erect stems and delighted in brick dust and cow manure piled high around the pots. Do you remember when John May sent out the Bride? And how happy all were that at last we had a white rose that would give us freely, flowers without coaxing. Do you remember Charley Anderson and how he urged that Madame Cusin was a good rose. Then what a stir there was over the Bennett, sweet of flavor, short of stem and blue of color. Mrs. Pierpont Morgan, "a large a Beauty" and so much more in evidence. How from Mermet, came God-given, through the hands of Mr. Moore, the Bridesmaid; then Meteor burst forth, out of

darkness to give us the first good red of profuse bloom.

Sprinkled here and there through all this time new roses grew, bloomed and died because not good, hopes built but to be blasted and Perle remained the only yellow for the florist. Liberty came, sweet yet disappointing to most growers, now Richmond comes to do her battle, which shall win? Each succeeding year brings before you new candidates for your favor, they rise, they shine, they disappear, sweet as the child of one's own raising. Each thinks his will succeed, and, yet when brought before the judgment of the buyer, they are doomed to live only in the memory of the originator. And beauty reigns, as ever, in plant or woman, still queen of all.

To go over the long list of roses that from time to time has been added to by candidates for popular favor would seem useless, since, once condemned, there is little hope for resurrection, and they stand only as monuments to the immense if fruitless labor of careful painstaking workers. Here and there one remains for a brief period, a seeming success, supplanted by some new candidate, perhaps better, far more probably not so good as the old; still there remains the list of but ten or a dozen, the standby, the reliance of grower and salesman. That Beauty has so long been a favorite is not to be wondered at, for although not a truly beautiful rose (at least in some eyes) never as yet has one been produced with the vigor of growth and luxuriance of this rose, and when to these is added its fine fragrance, it is not surprising that it has a hold on the popular heart only to be broken by a more wonderful rose yet to be produced. Whether a Hybrid or a Hybrid Tea, found by accident or purpose, the fact remains that it was the first of the Hybrid class that proved to be ever blooming under glass; may we not learn from this accident that there may be others among the Hybrid Perpetuals which under skilful treatment could be induced to give us as freely of their bloom and of their brilliant coloring. Bride and Bridesmaid, offspring of good old Mermet, must remain long the leaders in their race of tall growing Teas.

Testout came, a revolution in the clear pink class, and while never a great favorite was, I think, among the very best of summer roses under glass. It still remains a most prolific bearer. To me it has been a source of wonderment that the retail florist who grows flowers for his own use, has not made more of this rose. It responds to a generous treatment as gratefully as any rose I know of. Do you remember it as shown by E. G. Asmus at the shows of say ten years ago? Was it not fine?

Mrs. Pierpont Morgan with Canadian Queen, and Mrs. Oliver Ames followed Madame Cusin, both sports from her, and except for the size of Mrs. Morgan, no great improvement over their mother; for delicacy of flower when great length of stem is not required, to me there can be no more pleasing bloom and certainly the production is

not stinted. Meteor was the first continuous blooming red rose of size and merit sufficient to warrant growing it in number, and the finest blooms were doughty rivals of Jacqueminot, but its bad habit of throwing faulty blooms on the best growth set all the world agog trying for an improvement, and when Liberty came there was great rejoicing. But this is not a rose that grows for everyone and murmurs of dissatisfaction were heard from many quarters. Now that there is Richmond to fall back upon it is to be hoped that for everyone an abundance of red roses may be had; the choice between is a matter for the individual, and no opinion of one will influence the other. These seem to be the bulk of roses grown for market in the large centres, and while the demand for them continues, they must of necessity be the ones to which the grower will give the closest attention.

I have omitted any mention of the lesser lights and will content myself with simply mentioning some that appear in the markets with more or less regularity, saying, that in roses as in other things, variety is the spice of life. La France, once so popular, seemed to die when Nyack soil refused to longer perform its wonders. There have been and still are others in the line, that, while candidates for favor, have gradually disappeared. Today, Wellesley, on the same line, is a candidate. May it live long and prosper! Franz Deegan, a yellow with orange tint; old Madame Hoste, yellowish white; now and then Bon Silene, forerunner of them all, still has her admirers. Madame Chatenay, fine when well grown; Golden Gate, ugly when large, droopy when medium, ragged when small; Sunrise, essence of light in color, rather small and yet beautiful, can still be seen, while Sunset went the way of all the earth. Killarney is a candidate for favor among the pinks; what success it may have still remains to be seen. Resurrected from the forgotten, it may be there are others that if handled differently, might prove at least worthy of a trial.

There are still others that, beautiful in and by themselves, when brought under the fire of close examination, do not stand the test and have been relegated, most of them, to the scrap pile.

You will notice I have made no mention of Hybrid Perpetuals, chiefly because I know nothing of them. As market men they concern us little, since they are of little moment for cut bloom and it was only about roses for market that I understood I was expected to talk tonight. As a grower for market, while thinking of what I should say to you, there have come to me several questions that perhaps may have come to you and this may be a good opportunity to ventilate them in a degree. There seems to be one question, unanswered, yet ever coming up, that, since each year there are new roses brought forward, is it good business to keep planting old kinds to the exclusion of the new? Do we advance as rapidly as we might? Do we give the new roses a fair show? Is it possible that the old are so good that we

do not need the new? Knowing the state of the market generally, what is the encouragement for growers to make an increase in the area of ground under the glass? Is there any inducement or business opening for new men to embark in growing, and if yes, how should the beginning be made, with a small or a large plant? What influence has it had on the market to have erected such large plants as have been built in the West?

What improvements have been made in growing methods in the past year?

Which class of roses is best for the general market, Tea, or Hybrid Tea?

What is the general market and what are its demands? By the general market I mean the market as made up of all classes of people as buyers, and by demands I mean quality, quantity and variety. It goes without saying that quality is always a first requisite and that a good rose is always more desirable than a poor one, but the word quality as generally understood in this market means that as a rose, no matter how good the bloom itself may be, if stem is not an element it must go in a low class, while many roses, the blooms of which would attract little attention otherwise, if with long stiff stems, seem to rank high. Naturally it must seem that the body of buyers be composed of a few high-priced, a large number of medium-priced and a very large number of low-priced individuals. What proportions do these bear to each other, what do they demand in variety, are they entirely content with what we are now giving them, or do they want others old or new? I am well aware that New York is said to be the best market for the best and the poorest market for the poor; if this be so why is it? This naturally leads to another question, what constitutes a valuable rose and which characteristic is the most valuable? What constitutes a good or perfect rose viewed from a retail standpoint and what from the grower's view?

Does specialization in growing lead to the production of better flowers? Has it been noticed whether, since the tendency has been to confine efforts to separate classes, any appreciable increase has been made in the number or quality of such flowers?

What effect on the market has the introduction of the Hybrid Tea had as against the Tea?

What influence do rose shows have on the market, stimulant, depressant or neutral? In what condition should roses be shown, specially prepared or in such a condition as a careful grower would have his shipments for the market? In other words, are the exhibits at the rose shows any true index of the roses grown by the exhibitor and thus any criterion for forming a judgment of his general ability, or are they simply a selected few specially prepared with the view of winning prizes, irrespective of the keeping qualities and availability for market purposes; and as such are they good educators of the public or is this not the intention and purpose of rose shows?

I presume no one has been in the business for twenty years and made a moderate success who has not had more or less inquiry from inexperienced men and women, asking how he

HOUSE OF CHRYSANTHEMUMS AT MORTON F. PLANT'S, GROTON, CONN.

The accompanying picture shows a house of chrysanthemums Mrs. Wm. Duckham and Merza. It was one of the three houses that took first prize in the Massachusetts Horticultural Society competition against all New England, this being the second consecutive time this prize has been won by these houses. Also from this house

or she may make a beginning. As advice is usually cheap and moralizing easy, I usually give the following as a formula, premising it with the remark that the best way is to go to some good grower and work for him until the principle has been mastered, that constant watchfulness, great care, the utmost cleanliness, and steady work, are the "Open Sesame." The minutiae will only come from experience, and he who has pluck to succeed will do so in spite of failures; and, learning from mistakes, eventually make as few as possible, having done which he will have reached as near perfection as any of us will ever come.

To the grower of roses under glass, problems are always coming. There are no hard and fast rules that, laid down, can be followed. The novice can learn the general principles by an earnest attention to the work as he sees it done under his tutor, and the brain work must keep up with the manual; the reasons for certain lines of treatment must be understood, not blindly accepted as rules invariable, but to the end that under certain conditions a given treatment ought to produce a certain result. The endeavor to learn the cause of failure may result in greater success, as well as a mere correction of the error. There is probably no branch of agriculture that will so well repay intelligent effort as the production of flowers under glass, but the road is not all smooth, the failures are as many as the successes, and it is only by persistent work, undaunted by failure

were won the Wells-Pocket gilt medal at the Philadelphia show in 1905, and the Buckber silver cup, also at Philadelphia, the gold medal, silver medal, and six firsts at New London and six firsts at New York, all in 1905. The picture is good evidence of the worthiness of the exhibits and the cultural abilities of the superintendent of this vast estate, Thomas W. Head.

unconquered by mistakes, and a grim determination to succeed even under most adverse circumstances, that the goal of success may be reached and the satisfaction had of having conquered.

AMERICAN VINES SHUT OUT.

Consul Keene, of Geneva, sends the report to the Department of Commerce and Labor that the Canton authorities of Geneva have given notice to all persons interested in the importation of American vines that after April 1, 1906, the importation of rooted American plants, whether grafted or not, will not be authorized in that Canton or province. He continues:

The perennial trouble about the dreaded phylloxera is the cause of this prohibition. It was claimed that this disease was introduced into the Canton, some twenty-five or thirty years ago, by American vines which were planted at Pregny. By the federal law of 1894 the importation of American vines was prohibited. Exceptions were, however, provided for. Acting upon this authority, the local government has for six years permitted the importation of American vines into 37 of the communes. The Canton of Geneva, with 4600 acres of vineyards, will now, like the great Canton of Vaud, adjoining it, with 17,000 acres of vineyard, be prohibited ground for American roots. Scions of American plants are not included in the prohibition, but will be admitted as heretofore, after passing the usual expert inspection.

MECHANICAL WATERING

A PROPOSITION.

"Flow gently, sweet Afton, among thy
green braes,
Flow gently, I'll sing thee a song in thy
praise."

The above as well as the poem referred to in last week's HORTICULTURE by Mr. Wittbold, was written by Burns, the man who wrote the "Wee, wee German Lairdie." I am sorry I can't sing a song in praise of the smoothly flowing watering machine, for as yet we have no idea just how the mechanical man does his work. My, but it must be a wonder! Healthy argument and criticism are good; that is what brings out points which are welcomed by every one; and the man who starts on a rampage and loses his temper, which is evidently what Mr. Wittbold did, generally gets the worst of the argument and loses the respect of his fellows. I have been at the business both private and commercial for twenty-six years. I have always tried to keep up with the procession in anything new; if I saw anything good I gladly gave it my humble indorsement; if, in my judgment I saw it wasn't good, I said so. I am not a diplomat in the sense of the word. Those gentlemen say "yes" when they mean "no", and there is no living man or men who have money or influence enough to buy me over to give opinions contrary to my honest judgment. I wish the readers of HORTICULTURE to observe this, and if at any future time I should write about things pertaining to the trade they may know that I give my opinions fearlessly and without prejudice.

Now let me ask Mr. Wittbold a few questions. Step into a private place; there are some plants whose foliage the water must not be allowed to touch; pots away up on shelves where the top rows dry out quicker. How is the machine going to work there? Seedlings out in cold frames hardening off, bulbs, etc. How are they going to be taken care of? Now we will visit the man who grows lilies and pot roses for Easter trade. The former are taken in and set close together till they want more room; then they are given more space. The roses are the same. How can the machine go over from 1,000 to 10,000 pots and see which wants water or even put water into them?

Suppose we go into a rose house. Did Mr. Wittbold or any other man ever water a rose house and not find there spots which didn't want water and spots where the soil was very dry? I know from experience that in using manure water we have to go over the dry spots with clean water before applying the manure. There are places close to the steam pipes where the little red fellow makes his home and the careful workman always gives this a little better syringing than other parts of the house. How is the machine going to overcome this? Then comes the young stock; how are they to be taken care of?

If Mr. Wittbold will read at last

week's HORTICULTURE the essay on Carnations by Mr. Secker he will find this: "I have yet to find the greenhouse so situated that all the plants are ready for water at the same time. Consequently if you are soaking the plants that are wet with your weekly feed, the result is soon apparent as the benches will be empty". Perhaps the gentleman's brain will not accept any new theories but he writes good common sense and is evidently governed by practical experience.

I suggest the following to Mr. Wittbold: Let him bring on his machine I will gladly let him install it in any of my houses, he to pay all expense. I will supply the water; any damage to crops or houses he is to make good. I will extend an invitation to the Boston Gardeners' and Florists' Club and any practical man of my acquaintance to come and see it in operation. Mr. Wittbold will get a square deal and it will be the best advertisement he ever had.

As I said in opening argument and criticism are healthy. Don't let us get excited; keep cool; let us have each other's ideas in a friendly way. Don't use any Billingsgate phrases; we all have to learn and I have yet to find the man who knows it all even if he is a specialist in his particular branch.

Mr. Editor, I have stretched this letter longer than I expected. In closing I thank the two gentlemen in your last issue for their views of the watering question and I, like Mr. Finlayson, will retire gracefully from the field and class Mr. Wittbold a benefactor to the florists' profession as soon as he answers the above questions by letting his machine do all the above work.

R. T. MCGORUM.

A SUGGESTION.

Answering my critics on mechanical watering in your paper of April 7th, page 443, will say, that I seem to have stirred up a hornet's nest. Let me ask, what experience have these gentlemen had with mechanical watering? Let us remember, that a pipe with some holes drilled into it, or some other arrangement that did not answer the purpose for which it was intended, should not be brought up as evidence to show that mechanical watering is a failure.

We have now fifteen houses equipped with the system, and are able to cut down our watering expenses 90 per cent, and do more even and better work than before. We grow palms and ferns, and find for this class of stock, it certainly is a grand success. As I believe only the evidence of those who are using my idea of watering should be of any value to the readers of HORTICULTURE as they would speak from experience, I suggest that HORTICULTURE get an expression from W. B. Davis Co., Aurora, Ills., Davis Bros., Morrison, Ills., Klehms Nurseries, Arlington Heights, Ills., or Stephen Hyde, Carthage, Mo. The above comprise vegetable and cut-flower growers, and their experience should be of value to the readers of HORTICULTURE.

LOUIS WITTBOLD

THE GREENHOUSES AT OCHRE COURT, NEWPORT.

One of the largest private ranges of greenhouses in Newport is at Ochre Court, the residence of Mrs. Ogden Goelet. It is always very interesting to visit this place because of its extent and the variety of plants, flowers and fruit grown there. The greenhouses are modern in the fullest meaning of the word and numerous enough to allow a house for each stock grown. There are two graperies, two nectarine and peach houses, two palm houses, one stove, one carnation house, one gardenia house and two miscellaneous plant houses, all of which are utilized to their fullest capacity by James J. Sullivan, the gardener.

The palm house, an ornamental structure of gigantic proportions, contains many large and beautiful specimen palms, but more interesting by far than these are some superb dicksonias, twenty-five feet high. In the stove are crotons and dracaenas in great variety, together with a collection of well-grown stove plants of other species.

With gardenias Mr. Sullivan has been continuously successful, which he in part attributes to his invariable rule in using water of a temperature a degree or more warmer than that of the house, gardenias being very susceptible to water of a cool temperature. Gardenias blooming abundantly and uninterruptedly since Christmas are present and past criterions sufficient to convince that Mr. Sullivan's watering and other methods agreed with the plants.

Over a year ago the San Jose scale became intimately connected with the peach and nectarine trees on this place. In this connection the scale became so persistently adhesive that fumigating with cyanide of potassium was finally suggested by the authorities at the agricultural college. The results were very gratifying and the trees are now fine and vigorous.

In the carnation house the varieties grown are Lawson, Enchantress, President Roosevelt and Variegated Lawson. Variegated Lawsons were planted so late that they are only now beginning to flower, but the flowers are considered so satisfactory that the plants are to be allowed to remain in the house all summer and more planted for next season in addition. On this place a small house is exclusively devoted to alternantheras. With alternanthera Mr. Sullivan departed from the usual method of putting in flats, and instead he planted it in benches in the fall. This departure has not been successful. Alternantheras, especially the tender red varieties, come through the winter in better condition if they are packed closely in flats; the other method might result differently if a high enough temperature could be kept up to keep the plants growing.

In a bench *Nicotiana Sanderae* is in full vigor and bloom. Mr. Sullivan finds that if plunged in water immediately after cutting, flowers of *N. Sanderae* will stand shipping and last a week in a house. Begonias seem to be coming in again here. I noticed them in the seedling stage in variety, including a fine lot of seedlings of the new red *Begonia Erfordis*.

Contain the finest assortment of selected specimen Evergreen, Deciduous Trees and Shrubs procurable, and its Landscape Department is at your service in arranging them. Price list ready now. Has tables of the best herbaceous plants, giving common and botanical names, height, color and season of bloom. Sent free. All inquiries cheerfully answered.

COTTAGE GARDENS CO., QUEENS L. I.

NEWS NOTES.

A gypsy moth colony has been discovered at Stonington, Conn. This is the first recorded outbreak within the borders of Connecticut.

T. F. Keller & Co., of Providence, R. I., suffered considerably from a fire which started in the upper floors of the building they occupy.

The department stores of Columbus, Ohio, are having special sales and disposing of large quantities of roses, shrubs and peach trees at the uniform price of ten cents each.

The nurserymen in the vicinity of Columbus, Ohio, have been very much annoyed and had considerable stock ruined by the rabbits during the winter. Especially have apple and pear trees been badly girdled.

Albert E. Ross, of Berwick, Me., has purchased the balance of the greenhouses of C. E. Bryant, of the same town, and will remove them to his own land. Mr. Ross bought one of the greenhouses some time ago.

The greenhouse of Flynn Bros., of Lawrence, Mass., were seriously dam-

HORICUM KILLS SAN JOSE SCALE
Made by **HAMMOND'S SLUG SHOT WORKS, Fishkill-on-Hudson, N. Y.**
SOLD BY SEED DEALERS OF AMERICA.
Glenside, Pa., March 31, 1906.

HAMMOND'S SLUG SHOT WORKS, Fishkill-on-Hudson, N. Y.
Gentlemen:—Seeing "Horicum" mentioned in Monthly Bulletin of Div. of Zoology, Penna., I would thank you to inform me where I can get a supply, say about a gallon for trial.
The San Jose Scale is very bad around this section and could no doubt push sale of the solution, especially as it is spoken of so lightly in above Bulletin.
Your early reply will oblige, Yours respectfully, H. J. HINDS.
P. S. Glenside is twelve miles from Philadelphia.

aged on Sunday last by the collapse of the wall of a brick building being erected next to their place. The cold wave that followed ruined considerable stock.

Conrad Appel of Darmstadt, Germany will make a large exhibit at the Jamestown Exposition next year, including a lawn of fine grasses and a show case containing grass, clover, agricultural and forest tree seeds and rare conifer cones.

George W. Glines, of Beverly, Mass., was shot, but not seriously injured by Frank Dowling on the morning of April 7, shortly after having discharged him from his employ. Wilfred Caldwell, Mr. Glines' brother-in-law, who pursued Dowling, received wounds that will probably prove fatal.

SOLD OUT.

Dear Sirs:—

Please discontinue my bulb advertisement in your paper and send bill. I have sold out till varieties are short and do not care to have inquiries for what cannot be furnished.

Respectfully,

O. B. STEVENS,
Shenandoah, Iowa.

PHILADELPHIA NOTES.

W. E. McKissick has moved his office from upstairs to the rear of his store down stairs. The store arrangements have also been altered and improved, affording much needed facilities for the rapidly increasing business of this energetic young wholesaler.

Jno. Haubert of Bala has rented six large stores in six different locations uptown for the display and retail disposal of Easter plants.

Notwithstanding the severe loss and inconvenience they suffered by fire the past winter, Dennison Bros. had a splendid lot of Easter plants. Their hyacinths were the finest that were put on this market. Grand Maier, and Gertrude especially were a revelation.

Jno. H. Dodds, for many years superintendent on the estate of H. S. Hopper, and a popular member of the Florists' Club and Horticultural Society, goes to take charge of the Wanamaker place at Jenkintown May 1st.

The Battles establishments overflowed into a large annex at 12th and Sansom. In addition to a grand exhibition of Easter subjects the pottery display was unique. Etruscan vases, Pompeian ware, Majolica, Rosa du Barry and Oriental art objects made up an exposition in this line that has never been equalled by any retail floral establishment.

H. M. TOTMAN, Randolph, Vt

CALIFORNIA NOTES.

The California orchardists' worst foe, commonly known as the codlin moth, against which a war of extermination has been waged for the past two years, is to be the object of a new attack, and the locality selected for the experiment is the Pajaro Valley, the leading apple and berry producing section of California. The Pajaro Valley Orchardists' Association has just now secured enough money to carry on the work and will be assisted in their labors by some of the leading entomologists of the state, among them W. H. Volock of the University of California. To a reporter this week Professor Volock said: "The object of last year's work was to ascertain whether arsenate of lead would control and keep down the codlin moth. It was successful elsewhere, so we decided to try it here. Records were taken by counting the number of blighted apples that came from trees that were sprayed and trees that were not sprayed. A marked difference was shown.

"The percentage was as low as 1 per cent. in some cases among sprayed trees, while checked trees that had not been sprayed showed 15 per cent. of bad fruit. The worms were not generally so bad last year, but in the orchards of a section where the worms were very bad there was a loss of 40 per cent.

"But it remains to be shown how many applications of this poison are necessary and when they should be applied; and also which are the most important sprayings, the earlier or the late."

Horticulturists representative of San Mateo county, Cal., have prepared a contribution for the trade press, and given it to all San Francisco correspondents of publications devoted to the interests of growers of the country. It reads as follows:

"A leading editorial this week in The San Francisco Chronicle pleased the growers exceedingly. It takes exception to a change inaugurated several weeks ago by Willis T. Moore, chief of the Weather Bureau, wherein his subordinates were directed to cease collecting and giving out the accustomed weekly crop and horticultural reports. The bureau has a large corps of observers, all intelligent men, scattered in all parts of the State, and the crop reports rendered by them for years have been of real value. They have been regularly published in county seat papers throughout the State and have been a means by which producers could keep themselves fairly well informed of the general condition and progress of crops and germination peculiar to the commonwealth. We are aware that the collection of crop reports is not one of the duties imposed on the Weather Bureau by law, but as it costs nothing except a little time once a week in the central office to compile the reports and a trifle additional for printing, we want them continued. It has been done for years, and has been a great public convenience. But Mr. Moore has stopped their issuance, and for 'no good reason,' says the Chronicle, 'the bad reason being that an impudent bureaucrat intrusted with the power to be contrary and hateful has taken a notion that he will exhibit those qual-

ities. This man Moore says we shall not have these horticultural reports any more. In this his course is not liked. It is not liked at all. The terms in which it and himself are being referred to in the current speech of the irreverent are forcible and expressive, but for the most part unfit to print. It is the general opinion that Moore's real reason for his action is a discreditable one, and the matter must not be permitted to drop. Congress should intervene and make Moore do what the horticulturalists of the country and people generally want done, and if he does not like it he can get out. There are others."

WHOLESALE
GROWER OF CUT FLOWERS

VICTORY

We do not need to advertise Victory aggressively any longer. We are making prompt deliveries of Cuttings daily and are giving universal satisfaction. ENOUGH SAID!

CUT FLOWER MARKET REPORTS

BOSTON Prices went up at the beginning of the week on choice stock, and the light supply has helped to maintain same, although the immediate demand has been insignificant. Growers are holding back their product, either on the plants or in caves, and nobody knows just what to expect for Easter, the general impression being, however, that there will be a large supply of all kinds of flowers when the sun rises on Easter Saturday morning. There have been practically no violets in the city for the past two days. The weather has been dark, but not cold, and there is no reason why there should not be an abundance of material at reasonable figures. Lilies are exceptionally good as a rule, and advance orders are very heavy. Callas move slowly. Welch Bros. report the largest advance orders ever placed for Easter, and the problem is, with them, not a question of orders, but of turning over the stuff for delivery. McCarthy reports an unprecedented demand for lilies.

BUFFALO The past week found the market in somewhat better condition, although stock seemed to be somewhat plentiful in most lines. The latter part of the week found the market strong in carnations, which were not so plentiful and prices were somewhat better. Roses and bulbous stuff seemed to continue coming in faster than could be disposed of; prices had not changed much. Demand was fairly good on Harrisii lilies and callas, and at the end of week they were pretty well sold out. Greens were in fair supply and demand somewhat greater than usual. Other flowers in medium supply. The coming week is looked for to be one of the busiest of the season, and all are making preparations for a big Easter trade.

CHICAGO Easter week opened up with fewer advanced orders on the wholesalers' books than in former years, but Sunday's and Monday's mail brought in the orders up to, and at present writing, ahead of last year. The call is for white stock, as is to be expected, but colored stock is in demand to an unusual degree this season. Plant sales have been heavier by the plant growers, and retailers are stocking up this class of goods, and the displays in Samuelson's, Mangle's and Weinhoeber's are truly magnificent. Rustic and twig basket are being used with artistic effect, especially with bulbous stock in bloom. Beauties not up to the standard of some years, but good stock and clear color is in abundance. Except on 20 to 24 inch, they will be

somewhat short of demand. Brides take the lead in teas; Richmond comes next, and Bridesmaid a close third. Quality all the way from top notch to weak stems and open buds. One thing to be noticed is that the retailers are asking for some of the new roses. Orr English, Killarney, Moulton, and Joe Hill are in demand by the best class of trade. Carnations are plenty and good. Bountiful and Enchantress easily have the call, but Lawson and White Clouds are moving well, and no over-supply of any well-grown variety is looked for. Growers are rapidly realizing the disastrous effect of "pickling," and little of this stock is looked for this season by the trade. The estimated crop of lilies locally grown is 160,000 blooms, with receipts from outside sources of about 25,000 to 35,000. Fully 60 per cent. will be marketed in pots; balance cut. Growers have "hit it right" this season; for quality and size of buds, never was stock finer, and while a good many are rather short stems, they move well in pans of 3 to 5 stalks each. We notice a larger propagation of giganteums grown than formerly. Prices hold firm at \$12.50 per 100; \$15 for extra fine is easily obtained. Lily of the valley is abundant; callas in demand; tulips not as plentiful as usual, but enough to fill early calls. Narcissus fine and in over-supply, except for choice sorts; violets will be short, especially single, as the local stock is about exhausted and Hudson River stock will be the source of 75 per cent. of receipts; prices firm. Pansies, lilac, marguerites, sweet peas, mignonette and other small cut stock are in almost all the retailers' show windows. In greens, fancy ferns, Sprenger and boxwood are leading in call. Smilax strings scarce, and good asparagus bunches none too plentiful, while the asparagus strings are in over-abundance. Wild smilax is in heavy demand and of fine quality for the late season. Azalea plants are in fine form, and retailers are well stocked. I noticed some beautiful Ramblers and rhododendrons in the retailers' windows. Bulbs in bloom planted in attractive baskets are in evidence in al-

most all the stores and cannot fail to bring good returns. All look forward to the most prosperous trade Chicago has ever known.

NEW YORK The supply of small roses is lighter than last week, and a tendency toward higher prices is noted in the case of these and of carnations. The requirements of the retail market are very light, however, and easily satisfied. Business is exceedingly quiet on all sides, and there is but little yet on which any estimate can be based as to what and how much of it will be wanted for Easter.

PHILADELPHIA Trade conditions the past week were satisfactory. Saturday was one of the best days, but notwithstanding this little spurt much good stock went to the street men. The feature of the rose market was the extra choice quality of the Chateaus and Killarneys coming in. Beauties went pretty well, although we hear of some lots that went at abnormally low figures. Carnations have shortened up considerably, but no scarcity is anticipated for Easter unless perhaps in Enchantress and one or two other varieties. Violets also shortened up, with a corresponding stiffening in prices. Cut lilies are in good demand. Lily of the valley is still over-plentiful.

BUSINESS CHANGES.

Sidney Hoffman has sold out his lease of the store he has occupied for the past year on Bromfield street, Boston. The place has been taken by a watchmaker.

CUT FLOWER MARKET REPORTS.

COLUMBUS On every side the greatest preparations are being made for Easter; the florists, without exception, have very fine stocks of both flowers and flowering plants. Lilies look especially well; there are plenty of Ramblers in bloom and a brisk demand for them; other stock in good shape. There was no particular change in the prices this past week; roses perhaps are in better demand. Indications are that flowering plants will sell even better at Easter than they did last year, when the quantity put out surprised even the oldest members of the craft.

LOUISVILLE Business conditions last week were exceptionally good. Carnations have had a brisk demand. The supply is fair and the quality very good. Roses of good quality can be had in great quantities. Violets and lilies of the valley find ready sale, and the supply and quality are generally satisfactory. Mignonette, hyacinths, jonquils, tulips and other seasonable stock can be had in good quantities, with the sale generally satisfactory. There will no doubt be a great supply of stock for Easter in nearly all lines.

MINNEAPOLIS Cut flowers for Easter are good, but the supply is short. Plants are in great abundance and prime condition. Azaleas, hydrangeas and all kinds of rose plants are beautiful and sell readily at the top prices. Bulb stock is good, as are also the carnations and roses, but we are going to have trouble in supplying the demand. Everything points to a rush of business the last of the week, and the greenhouse stock has been sold out for some time. Talk about new roses! With Miss Kate Moulton in Minneapolis, and the charming Minnehaha in St. Paul, we can hold our heads high, and if any of our eastern friends thing we westerners are slow, just let them see our new roses. We can "show them." Miss Kate Moulton is by this time well known, and she is keeping up her reputation to the letter. Minnehaha is a natural sport from the Princess of Wales. The foliage is heavy and dark and makes a fine appearance. The rose is a shell pink, and has splendid lasting qualities.

EASTER PROSPECTS AT NEWPORT.

Every indication points to a good business all round for Easter. All that portion of the stock which Newport growers will be able to supply the dealers is in good condition. Lilies are in better shape than was thought probable some time ago, other bulbous stuff is plentiful in supply at present, but it is not thought that there will be sufficient for the Easter demand. Prices quoted are in advance of last year—two cents at least on lilies, and other lines higher in proportion. One or two dealers are already showing a little more enterprise than usual in the way of making tasteful displays in their windows in order to give an idea of what can be had when the time for purchasing comes.

Plants are higher than last year, but to counteract this they are of better quality. Spireas are especially good

with one dealer, while with some others they are of a quality that would give any one the idea that flowering plants are either very scarce or in great demand. Most of the plants in the stores except lilies were purchased from growers in the vicinity of New York and Boston, and some from Providence.

LARCENY OF COLIC.

Leominster, April 7.—George M. Kendall reported to the police today that his lower greenhouse on Main street was broken into and some of his greenhouse cucumbers stolen.

The greenhouse was entered by the breaking of some of the glass through which the thief or thieves crawled, got their pockets filled with the nightmare producers, then skipped. It is thought that the work was done by boys. The police are working on the case today, and are watching the stores where jamaica ginger is sold, for clues.—Worcester Telegram.

A CYANIDING DEVICE.

A contrivance for use in applying hydrocyanic acid as a fumigant in greenhouses has been perfected in England under the name of Edward's Safety Cyaniding Machine. It is simply a framework over the bowl of sulphuric acid and water, to support a scoop containing the cyanide, with a lever and string, whereby the cyanide salt is dumped into the bowl after the operator is outside the building.

CATALOGUES RECEIVED.

WANTS

Advertisements in this column one cent a word. Initials count as words. Cash with order.

FOR SALE—Two greenhouses, 23x95, 20x68, with hot water heating apparatus and well stocked with Carnations and Violets. Will sell as it is with dwelling house attached and 17,000 feet of land, or to be taken down and removed. Address 703 Chestnut St., Waban, Mass.

SITUATION WANTED—By first class rose grower competent to take entire charge of place of any size. Have had full charge of two large places during the past twelve years; have produced first class stock and paid well; married. Address J. P. M., 84 Hawley Street, Boston, Mass.

WANTED—An assistant capable of handling the vegetable and fruit growing work outside in a large private garden. Wages, \$50. James Holloway, "Dorsoris Park," Glen Cove, L. I., N. Y.

Heating a Greenhouse

is not a matter of mere installation of a boiler, the laying of pipe—it's the accurate, practical knowledge of plant requirements and heat engineering. 60 years of boiler test is one thing, and the laying of pipe another.

Get the right people to do the right thing.

HITCHINGS & COMPANY,
Greenhouse Designers and Builders,
Manufacturers of Heating and Ventilating Apparatus
1170 BROADWAY - - NEW YORK

The Standard Steam Trap

Certificate of merit awarded at Washington, D. C., Florists' Convention. For simplicity, durability and perfect satisfaction it has them all guessing. It is in a class by itself. To see it work a large plant as well as a small will convince the most sceptical that it is the Florists' Friend.

The Standard Ventilating Machine still leads as the most durable, easiest working and the all-around satisfactory machine.

The Duplex Gutter is gaining all the time, over 12,000 feet sold thus far this season. Catalogues free.

Three Sterling Carnation Novelties

Winsor, White Enchantress, and Helen M. Could

There is nothing about any of these varieties that we wish to conceal; therefore, we cordially invite all carnation growers to pay us a visit. Come at any time.

WINSOR—Winner of Lawson Silver Medal.

This is sure to prove a winner. Nothing approaches it in color, which is a clear silvery pink—a shade between Enchantress and Mrs. Thos. W. Lawson—and much more beautiful than either. In fact, it is just the shade that we have all been trying to get. The color will make it sell in any market. The stem is just right. The flowers are considerably larger than Lawson and much better shaped. As a grower it has everything that can be desired. So far we have not seen any large-flowering variety quite so free as Winsor.

WHITE ENCHANTRESS.

A pure white sport of Enchantress, at once the most popular and most profitable carnation grown today, on account of its size and stem and freedom with which it blooms. White Enchantress is identical in every respect but color. Those desiring quality as well as quantity will find it in White Enchantress.

HELEN M. COULD.

This is a beautiful variegated sport of Enchantress. The ground color is a lovely shade of clear pink, the variegation carmine, making an exquisite combination of colors, besides being something distinctly new. At a short distance the variegation does not show at all, the general effect being a beautiful shade of dark pink. Growth, habit, size, and stem are the same as Enchantress.

We have fine stocks, from which we can deliver healthy cuttings of Variegated Lawson, White Lawson, Red Lawson, Enchantress, Mrs. M. A. Patten, Lady Bountiful, etc.

Our Variegated Lawson is all that we claimed for it last season, and is giving the fullest satisfaction everywhere—the best in the variegated class. Come and inspect our stock of new and standard sorts

C. EISELE, 11th and Roy Sts., Philadelphia

Some People have taken our ad-

vice as published in these columns re-ent- **My Maryland** ly and are buying for trial. We reiterate here—it succeeds with you as it does with us, it will prove the best white carnation you ever grew. Despite the variety's apparent failure in several places, we strongly advise all growers to give it a trial. We have been frank about its faults as developed in other places. We doubt if these will develop in many places.

Jessica we believe, will prove generally in all soil will produce the best red and white variegated carnation of the low varieties show as strong as in the most fertile soil, and it is a wonderful producer. Extra fine stock of both varieties ready to ship. Price, \$2.50 per 100; \$12.00 per 100; \$100.00 per 1000. Pot plants, \$3.00 per 100 extra.

Orchids Orchids

We Are Still Headquarters for Orchids

Here is a list of plants just arrived in superb condition, and owing to the large quantities received and lack of room in which to care for them all, we make the following offer:

Cattleya Speciosissima	per case \$65.00
" Mossiae	" 85.00
" Percivaliana	" 75.00
" Gigas	" 75.00

Each case contains selected plants, no dead or useless stock; hence the buyer sustains no loss whatever in waste. If you want to stock up with **Orchids**, do so at once. Give us your order, and we will fill it to your entire satisfaction. If not, return the plants at our expense. **A LARGE STOCK OF ESTABLISHED ORCHIDS ALWAYS ON HAND.** Also Peat, Moss, Baskets, etc.

PEACOCK'S DAHLIAS

We offer to the trade the finest varieties of Dahlias in America, embracing a new and large collection from European growers, and many never before offered in this country; among which we would mention:

Miss Florence M. Stredwick
Fritz Severin
Dorothy Vernon
Goetlinde
Harbor Light
Mabel Tullock
Maid of Honor
Northern Star
Pink Pearl
Princess Reise

Shamrock
The King
Charm
Edith Groome
Effective
Frute
Helen Stephens
J. B. Briant
Mary Farnsworth
Mrs. J. W. Wilkinson

Mrs. John Barker
Rainbow
Sweet Nell
Sternschumpe
Sybil Green
Yellow Gem
Miss Minnie McCullough
Lemon Beauty
White Dandy
Yellow Livoni

All of the above fully described in our Descriptive Catalogue which we will forward to anyone upon application.

ROOTS

We still have strong field grown roots in a number of varieties—and over 50,000 choicest double mixed not named—also a large quantity of Single Dahlias under separate colors and mixed.

Hardy Plants

WORTH GROWING

The favorites of the old-time gardens are coming to the front, and deservedly so. No feature of the garden can be more satisfactory than a well-arranged Hardy Plant border, producing from April to November a continuous succession of charming flowers, much more interesting than the usual greenhouse assortment, and equally valuable for garden embellishment and cutting purposes. The Hardy Plants have the advantage of greater permanency, requiring only cultivation, enriching, a slight mulch during winter, and occasional checking of the more robust growers to keep the plantation in good condition for years.

Dwarf Fruits

PEARS IN DOUBLE UPRIGHT CORDON.

The aim in growing dwarf fruits is to produce plenty of sound, healthy wood bearing numerous fruit spurs within a prescribed limited space. Because of the conventional way of training this is easily brought about. Such branches are allowed to develop on the stem as are required by the style of training; cordons, palmettes, fans, vignes, lozenges, and the like furnishing ample material for all situations.

As soon as growth is well under way all other buds on the trunk are rubbed off to prevent their interfering by future development. The side branches are permitted to grow the first season unhindered, the only care being to see that all parts develop evenly. If one branch or series appears to have an advantage, by bending the weaker ones so that they make a greater angle with the horizontal they will receive an impetus that will cause them to catch up quickly.

In February or March the previous season's growth is shortened one-fourth to one-third to induce the production of fruit with the renewal of growth. Only five or six fruit spurs should be allowed to a branch, more should be removed. During the season if growth is too pronounced the tips should be pinched about August 1 or when growth begins to slacken, in order to thoroughly ripen the wood before winter.

As the trees are grown on small space under artificial

PEACH AS FAN ESPALIER.

conditions they require constant care, every leaf, flower, bud, fruit, branch and root must be looked after frequently and carefully. The trees are heavy feeders and the roots run shallow so liberal quantities of manure and wood ashes should be supplied them.

A mulch is desirable, adding manure and preserving the water at the same time. Thorough clean cultivation must be given, and a careful conscientious supervision kept up all the time.

After the trees are formed little pruning is necessary. The wood, if excessive, needs to be pinched during the summer and shortened in at the winter clean up. As the fruit spurs become old they should give way to young, vigorous ones developed from dormant buds, or the old spur should be cut back to within an inch of the branch. A new growth will spring from this stub and form a new spur.

The trees may be trained against a house, wall, fence or trellis, or wires may be put up specially for a support. A novel way is to train the trees to a single wire strung along a walk or roadway, employing the single or double cordon.

R. J. Adams.

Magnolias.

The magnolias rank first among the flowering trees and they well deserve the distinction. We appreciate them more perhaps, coming into flower as they do, after the long dreary winter. What is prettier than a large specimen in full bloom, in April? We are often robbed of this sight by late spring frosts in the vicinity of Philadelphia.

There are many native varieties of great merit but those blooming early, with the large-sized blooms come from Japan and China and are more familiar to the lover of flowers. The most common and well known native varieties are glauca or sweet bay, also known as the Jersey magnolia, tripetala or umbrella magnolia, acuminata or cucumber magnolia, macrophylla or large dowered cucumber type, grandiflora or the treasured southern magnolia and Fraseri.

The different varieties classed as Japanese and Chinese are stellata or Halleana, Kobus, conspicua or Yulan, purpurea, Soulangiana and its allied types, Alexandria, Norbertiana, Lennei and speciosa.

The difficulty that many encounter in transplanting magnolia is due to lack of knowledge of the proper time

HORIZONTAL CORDON APPLES.

and location for them. A moist but well-drained, situation is what they like, as they have succulent roots that need a certain amount of moisture. April is the month for moving them and this will be the time when many of the Japanese and Chinese varieties are in flower. Fall planting, which is often attempted, is generally speaking, not successful. The plants do not have time to recover from the transplanting before winter starts in, and the soft sappy roots suffer from freezing and thawing; the tops also winter killing. After transplanting them a good mulch is advisable as it keeps the ground surrounding in a moist condition and encourages root growth more quickly.

Of the native kinds the most popular in the Eastern States is the glauca or sweet bay. Its fragrant flowers are the last to burst into bloom but are in so much demand that in Philadelphia they are sold along the street, where they find a ready market. The leaf of this one is small but beautiful, having a glossy surface giving it an evergreen appearance and glaucous on the underside. It is leathery in texture and farther south is an evergreen.

The variety grandiflora or southern magnolia hardly needs description, as it is well known, even in the northern cities where it is not hardy. Its large glossy leaves are magnificent and the cinnamon color on the under side is a distinct characteristic. The flowers are large and the fragrance they exhale is delightful. It thrives in Washington, D. C., and Louisville, Ky. In the latter city some beautiful specimens can be seen in Cave Hill Cemetery, standing thirty and thirty-five feet high. Joseph Meehan reports it hardy as far north as Claymont, Del., and one old plant grew for years in Philadelphia at Broad and Chestnut Streets.

The umbrella type, tripetala, makes a fine showy specimen for lawn planting and gets its common name from its style of growth. The macrophylla has even larger leaves, some measuring thirty inches in length. The tropical appearance of this species makes it a valuable lawn specimen.

Fraseri can be distinguished from the other native sorts by the heart-shaped base of the leaves. It has large foliage and flowers of a delightful fragrance.

The acuminata makes a fine lawn or avenue tree of conical habit of growth. The red seed pods are also attractive later in the season. The appearance of the green pods, gave this variety its common name of cucumber magnolia.

Of the foreign types the commonest is undoubtedly Soulangeana. This is the species that has the large pink and white flowers in April. Speciosa resembles it so closely that they can hardly be told apart. This can also be said of Alexandria and Norbertiana. Though the former comes earlier and the latter later than the type. Lennei is a fine deep red or crimson variety, the flowers being cup shaped and quite large and full.

The very earliest to flower is the stellata or Halleana. This is a dwarf species and when covered with flowers makes a grand display. Its beautiful star-shaped flowers are smaller than the other foreign types and very sweet. The only purple of merit is purpurea, which can be relied on to give good flowers.

In speaking of all as a class much can be said to their advantage and few criticisms made except regarding their hardness in some localities.

The Real Inwardness of Hybridizing

When I am so often asked if crossing is done by grafting, and when I see an article published in the Scientific American that the way to obtain seedless fruits is to remove the pistil before pollen has taken effect, I feel that I may be excused for writing what the plant breeders already know. A hybrid in this country is understood to mean a cross between two different species; and the combining of the two varieties of a species is called a cross. In either case the work is done through the blossom, and our tools are the germ-cells, both male and female, called gametes by scientists.

There are two classes of hybridizers. The object of one is to ascertain the whys and wherefores of results, the other seeks improvement by various combinations. If a person who is engaged in the poultry business wishes to change his flock to a more popular breed, he can do so by obtaining a male bird of the desired breed to mate with his flock and the offspring will be hybrids; and if those hybrids are bred together, each germ-cell will represent one or the other of its grandparents; and if two germ-cells representing the male bird unite, the offspring will be pure bloods of that breed; but if a germ-cell representing the flock unites with one representing the male grandparent a hybrid is formed, the same as the first hybrid or first generation; and these hybrids if bred together will continue to produce both pure bloods and hybrids, and it is only necessary to select the pure bloods from the hybrids of each generation to increase the pure blood flock. But the pure bloods when bred together will produce pure blood offspring. This, thus roughly described, is what is known as Mendel's law of heredity, and is a boon to breeders.

The old method of purifying or grading up stock was by what is known as Galton's law, which is that the whole heritage of the offspring, the two parents together, contribute one-half, the four grandparents one-quarter, the eight great-grandparents one-eighth, and so on. But under that law the breeders did not know that they were constantly producing hybrids which were taking them back to the original cross, which gave to pedigrees a black eye, by occasionally cropping out. The Mendel's law, as described above, supposes purity of parents, hence purity of germ-cells. But if the parents are of a compound nature the germ-cells will also be compound, and the character of the cells that may unite cannot be foretold. Of over 100,000 grapevines tested, no two alike have been produced. We cross and hybridize and get things never known before. Some are probably reversions back to varieties that perhaps were growing one thousand years ago. It is only when two germ-cells of those remote characters happen to meet that they are developed. We can only study prepotencies and affinities, and determine the effects of various combinations, and it will ever be thus until we can analyze pollen grains and female cells and read the characters they bear.

But the above-mentioned fruits have one advantage over plants that are propagated by seed only. It is in the fact that when a desired variety is obtained it can be propagated indefinitely by buds or grafts and the exact type is fixed and endures and is not subject to any mixture, while with all plants such as corn, wheat, rye, oats, cotton, etc., it is very difficult to keep them pure any length of time.

Murray Chandler

R.B. White

Preservation of Ornamental Trees

The beauty which fine trees lend to their environment, the healthful conditions brought about by the assimilation of noxious gases by the leaf surfaces, the moderation of the atmosphere, the welcome shade, let alone the individual and collective attractions of our trees should be a sufficient incentive for their careful preservation by private owners and municipal guardians. All possible means should be employed by which those attacks may be abated which weaken the vital forces and thus hasten their decay and death.

A tree subjected to modern city or suburban conditions has much with which to contend. In a multitude of instances defective and injurious pruning has left the trunks of our trees covered with dangerous wounds, stumps and protuberances. Electric light wires have been allowed to burn and mutilate the branches, escaping sewer and illuminating gas has poisoned their food supply and these beautiful embellishments of our streets have been suffered to be mutilated by horses and vandals. Lastly, deficient nourishment caused by improper location relative to sidewalks and pavements and the persistent attacks of hundreds of forms of insects and fungi have caused our trees to demonstrate in their own way the law of the "Survival of the Fittest."

Weakened and decayed crotches. A prevailing vault with American elm. Clean and fill with cement and bolt securely before the filling becomes hardened.

A large twin white oak, held together by a linked bolt and guyed to a sunken "dead man" of concrete by a steel cable. Both stems contain large fillings of concrete, on which vines are being trained. Fifteen and a half tons of filling material (concrete) were used in the two cavities.

In the general care of our ornamental trees pruning and the care of wounds is an important factor and should be thoroughly understood by every one in charge of trees. Generally speaking, pruning should begin when the tree is set out and should be continued at intervals throughout its entire lifetime. This implies a small amount of labor stretched out over a number of years and is a practice which will insure a correct form, a small number of wounds of such size as to warrant their healing with rapidity, and is a practice which will obviate to a large extent the necessity of the severe methods of treatment to which many old trees are subjected. It is unnecessary to state that the variety and uses and the many conditions which our trees have to meet gives necessity for a varied form, which in every case does not develop or show off the tree to its best advantage. In the case of street trees and of specimens so situated as to be viewed beneath their branches, less space for crown must be carried high and should be so pruned that a single leader is formed. In other cases where low crowns and thick foliage is desired the practice of topping is at an early stage of the tree's existence to be avoided. In either case the natural beauty of the tree is often lost. In the case of most varieties of ornamental specimens or in groups the natural tendencies and habit of growth should be encouragingly

and very little pruning is necessary aside from keeping the trees free from dead twigs and branches. This rule will hold good in the cases of such trees as naturally grow in a graceful form, as for example; the beeches, elms, rock maples and many of our conifers. On the other hand, various other varieties such as the soft maples need continued attention in order to make them attain a shape conducive to the greatest strength and beauty.

It is essential in the operation of pruning, that a certain definite purpose should be held constantly in mind. Pruning for the mere sake of pruning has no place in the gardener's program. Just what to cut and what to leave, for the good of the tree, requires study, and not until the ideal is formed is it time to use the saw. It is well to begin at the top of the tree, first relieving it of all dead branches and lowering the larger limbs in sections, making the final cut in every case in a line with, and as nearly even with the trunk as practical, this being done in order to make the cambium surrounding the wound in the path of a downward flow of the elaborated sap, since this insures rapid healing. Where practical, it is well to make the cut perfectly even with the trunk, but in isolated cases such a method produces an unnecessarily large wound, when by a slight deviation from this line a much less severe cut may be made and one which will not detract from the appearance of the tree after the healing has taken place. In general, enough live wood should be removed to give to the tree a well-balanced effect, to allow an even diffusion of sunlight and air, and to provide for a free and easy growth of the remaining branches. It is often the case that in many young trees, as for example the horse chestnuts and soft maples, an over abundance of inner growth is formed to the detriment of the tree; this should be thinned out severely, in order that the vigor of growth may be thrown into the leader and main branches.

Where two limbs interfere with each other the least important should be taken out, as natural grafting, although desirable in certain instances as a means for holding together a weakened crotch, is generally harmful from the fact that the graft is imperfect and an impaired circulation of sap is resultant.

On the trunks of many oaks and American elms an unnatural growth known as "feathering" is often produced. This condition results from the springing into growth of latent adventitious buds, and is caused by some irregular condition of the tree. When once feathering is thoroughly established a large leaf surface is produced, which diverts the upward flow of crude sap, elaborates it and uses it for the development of its own system to the detriment of the remainder of the tree. The large size and dark color of the leaves upon these growths, as contrasted with those of the rest of the tree, is oftentimes very apparent. Although the effect rendered by these irregular growths is picturesque, they should be removed, especially in cases where the tree shows a tendency to decline in vigor.

It may be set down as a prime requisite in pruning that all wounds should be covered with some water and air-tight preparation in order to prevent checking and to exclude the spores of fungi, which if given free access will produce certain decay. Many dressings have been tried with various degrees of success. For rough

work in summer perhaps coal tar is preferable, owing to its cheapness, the ease by which it is applied, and its antiseptic properties. However, its color is disagreeable and very seldom matches the color of the surrounding bark, and in many cases it is objectionable to use about houses.

Perhaps the best treatment for the larger wounds is to apply a thorough coating of some antiseptic, as corrosive sublimate, or creosote, followed when dry by a heavy coat of good quality lead paint of an inconspicuous color. The larger wounds should be repainted from time to time until they are completely healed over, and in order to hasten the process of healing the edge of the surrounding cambium should be slit perhaps once a year to prevent its becoming bark bound. Upon the amputation of dead limbs it will be found that in many cases the decay has penetrated into the trunk to such an extent that even the most thorough applications of antiseptics will not destroy the rot-producing fungi; and to simply paint over such wounds does not prevent the destruction of the affected wood. In such instances the decaying material should be carefully chiseled out until sound wood is encountered, the cavity thoroughly treated to an antiseptic and painted. In a majority of cases this is sufficient to prevent further decay, but where the cavities are deep or so shaped that they will hold water, or where they are so large as to materially weaken the branch it is necessary to fill them with a substance which will exclude the water and air which in the later case will furnish a mechanical support.

For this purpose there are a number of brands of elastic cement upon the market, which although they furnish but little mechanical support to the branch, cling tightly to the surrounding wood and are effectual in repelling moisture and decay. A mixture of asphaltum and sand, the cement of the ancients, may be used to advantage in cavities where the constant force of the wind would tend to crack and break a hard setting material. For small holes putty, melted paraffine or grafting wax may be used successfully. In more severe cases where the heart wood of the trunk or larger limbs has become decayed a filling of Portland Cement concrete reinforced, where necessary, by steel bars has proved to be the best method of preserving large trees from breakage or further decay.

It is only on trees of considerable value, reckoned by their size, associations and environment that this kind of work is practical, and therefore when attempted should be done with the greatest care, the same rules being applied as are followed by a dentist in filling a tooth, viz., a thorough cleansing, disinfecting and the procuring of a perfect union between the filling material and the cavity surface.

In removing the decayed heart wood care should be used to disturb the living layer as little as possible. This can be facilitated by the use of long handled gouges and adzes. Owing to the fact that the micelia of the rot-producing fungus penetrates deeply into the apparently sound wood much of the latter should be removed. The cavity should be made to slope inward and away from the opening at the top and sides of the cut in order to better hold the filling in place, and should slope upward and inward at the bottom to provide for drainage in case any moisture should collect in or behind the filling.

The inner surface of the cavity is then treated to a coat of creosote, diluted copper sulphate or corrosive sublimate and painted with two coats of heavy lead paint. To hold the filling firmly in place, large sized nails are driven into the inner surface of the cut at a

distance of two or three inches apart, preferably before the paint has hardened. In cases where large limbs have been filled with concrete it has been found advisable to insert one or more steel bars, extending them along the center of the cavity into the trunk and imbedding them in the concrete filling.

For large cavities the concrete may be made of one part Portland cement, three parts sand and five parts broken stone, with a three-inch facing of equal parts cement and sand, colored with lamp black to match the bark. After the paint is thoroughly dry the concrete may be put in place, using heavy cardboard formers fitted to the opening of the cavity and held in place by small nails. The concrete should be mixed as dry as possible to prevent "slumping" and should be firmly

A "doctored" specimen, showing how advantage was taken of old cuts for the purpose of entering the tree for cleaning and filling.

tamped in place. The formers may be removed within an hour and the still moist surface pointed, the edge of the filling being carried back beyond the line of the cambium so that the latter will grow over and not against the cement, as is commonly the case. If the tree is comparatively young and thrifty it may be expected to cover a wound eight to ten inches across and thus completely enclose the cement body, but on old trees where the opening cut has been large small hope can be entertained of a complete healing, and it is well under these circumstances to color the facing material carefully and to corrugate the surface in the imitation of the surrounding bark. In cases vines may be trained over the wound taking care that they be kept from the branches of the tree as much as possible. Where rotting has taken place in a juncture of two important limbs, or where such a crotch shows signs of weaken-

ing a bolt should be passed through both branches a few feet above the juncture, the ends being fitted with large washers and sunk beneath the cambium layer, using paint freely where the rod enters the wood.

Tree surgery may be safely undertaken during any season, but the amputation of live limbs from most species of trees should be discontinued during a short period in spring while sap is beginning to flow.

The weak and sickly condition of trees may oftentimes be traced to a lack of nourishment or to a poisoned food supply caused by a nearby gas leakage. When effected by gas the trees invariably show the effect first at the top where the plant first attempts to elaborate the polluted supply of crude sap. The presence of borers and the dark color and strong odor of the bark are other signs which tend to point out this prevalent ailment, and for which if of long standing there is slight chance of cure. In early stages of this kind the same treatment may be followed as for a tree which is lacking of proper and sufficient nourishment. Excavate a trench four feet wide and three feet deep around the tree at a distance of six feet from the trunk and fill with rich fresh loam, spade around the tree and manure moderately. Prune back strongly and spray for insects which have taken advantage of the tree's weakened condition.

W. H. West

Lincoln Park, Chicago.

The Rose, The State Flower of the Schools of New York

It may not be generally known that as far back as 1890, the rose was adopted as the State flower of the State of New York, by the votes of the school children of the State.

In 1890 the present Commissioner of Education, Mr. Andrew S. Draper, was State Superintendent and at Arbor Day in that year, a vote was taken in the schools as to the choice for the State flower.

There were no suggestions made as to what flowers should be taken up and of the different varieties of flowers, one hundred and thirty received some votes. There were 318,079 votes cast. The golden-rod received the largest number of votes cast, 81,308 while the rose received 79,666 votes. The result gave no flower the majority of the votes.

The vote between the golden-rod and the rose was so evenly divided, that the State Superintendent suggested that a vote be taken on these two flowers on Arbor Day in 1891. The result of this vote was 294,816 for the rose and 206,402 for the golden-rod. The Rose, the queen of flowers, is therefore considered the State flower of New York.

Before this, in 1899, a vote was taken among the school children of the State for the State tree and the Sugar Maple receiving the largest majority of the votes cast, is considered the State tree of New York.

Since the establishment of Arbor Day in 1888 there has been as many as 246,317 trees planted and an unknown quantity of plants and shrubs.

Arbor Day originated in Nebraska as long ago as 1872 and is now observed, in some measure, by every State in the Union.

Popularity
of the
cactus dahlia

It is interesting, also surprising to learn, as stated by our English correspondent in last week's issue that, while the newer forms of cactus dahlias are greatly preferred by growers in Europe and the colonies, the old doubles retain undiminished popularity in the United States. It is just possible that the grower through whom this information was obtained may lack sufficient basis for a comprehensive judgment as to tendencies in this country. So far as the New England section of the United States is concerned, we know that the cactus dahlia is rapidly—and deservedly—growing in popularity here. One needs not to look beyond the fall exhibitions, the dealers' catalogues, and the suburban gardens for convincing evidence of this fact. Dahlia culture in this section has, however, suffered a lamentable set-back within the past three years on account of a thrips which stings and ruins the flower buds while they are yet minute. A flowerless dahlia of either sort is no great ornament to the garden and it takes but a season or two of this disappointment to drive the dahlia ambition out of the average garden owner.

The
backyard beautiful,
on paper

The marvellous creations of the "Wizard" shrink into insignificance when compared with the achievements (on paper) of some of our modern "House Beautiful" and "Back Garden Beautiful" apostles. A book that has recently come to our notice records how two energetic young ladies changed a typical city back yard, 20 x 40, to an ideal back garden in double-quick time. By the hire of a man at 15 cents an hour and some seeds and fertilizer, "for less than ten dollars our little lawn was made, the path graded and our border dug and edged." Next, a few trifles of posts and laths set up, and a woodbine which accommodatingly travelled over a wire arching the path and speedily overspread the structure, over a soft green canopy under which to sit. The next day a shade tree to shut off the view from neighboring windows was next felt, so "on the following day a new tree was set directly in front of the bower. It was a round, stubby one, so placed as to hide us from the view of our neighbors when we

chose to sit upon the low seat within the sacred inclosure." Keep at it, young ladies. You're a wonder, each and every one of you.

Intelligent
help needed in
nursery and greenhouse

Mr. Manning very truthfully says in the paper which we publish in this issue that "we need more teachers who are competent to teach, more disciples of out-door art who look beyond the pretty flower-bed and the neat yard to the permanent improvement of their towns on broader lines." The people who buy trees and plants need intelligent advice and, as a rule, will be grateful for it. A more widespread knowledge of the simple facts regarding common plants, their wants, their care, and especially their proper place, is needed among those who supply the public with these goods. The average florist's employe is notably deficient in this most necessary qualification; in fact, a certain exploitation of the fact of this ignorance is often apparent, as though a practical knowledge of cultural matters was something beneath the exalted station of a florists' clerk. That these conditions will long prevail, we cannot believe. The young man who brings to his employer, together with his ability to buy and sell, a thorough knowledge of the material he handles and its uses and is able to impart that knowledge in sound advice to the customers of a house will not be long in outclassing his stupid fellows. The flower buyers and the tree buyers in every hamlet in the land are eager for just such a man in their midst.

The day
of reckoning

Easter is over and the man who has thought of little else for many weeks can now commune with himself for a moment before facing the new problems that await his attention. The over-timid grower will perhaps recognize where he made a mistake in not pursuing a more progressive policy and has the keen mortification of seeing his hustling rival elated over a record-breaking business which might as well have been his. On the other hand, the reckless buyer ruefully sees his anticipated Easter profits practically buried beyond reclaim, in the left over material. While no one can assume omniscience and the shrewdest will occasionally make a disastrous miscalculation yet it cannot be denied that the losses of the extreme optimist and the extreme pessimist might be materially reduced by the adoption of a more careful system of itemized records and especially by a close perusal of the experiences of others as given in the better class of trade reports. Unfortunately many so-called trade reports are not worth the paper they are printed upon and no one can blame the seeker for information that may help him to better success, if he turns, disgusted, from the vapid stuff of the "did-25-per-cent.-more-than-last-year" style which so many trade paper correspondents seem to imagine their brother florists are a-hungering for. The more exact his own register and the more thorough his knowledge of what is going on elsewhere the better will the grower know what to say to the import-order man when he makes his post-Easter call.

"MECHANICAL WATERING" APPROVED.

Editor HORTICULTURE:—

Dear Sir:—The discussion appearing in your columns on "Mechanical Watering" is interesting, and I compliment HORTICULTURE upon its sagacity in allowing free discussion upon the subject to appear in print.

You also show good judgment in printing the letters of Messrs. Finlayson and Ingram, under the heading "Old Fogies," and I will bet a large apple that neither of these gentlemen have ever seen Mr. Wittbold's watering device in operation.

Your correspondents apparently base their criticisms upon what they have seen in England and European countries. I spent some years in England, and go there now almost every summer and, having seen Mr. Wittbold's device in operation at his firm's establishment in Chicago, I want to tell these gentlemen that they remind me of a person not having seen anything more modern than an old-fashioned dumb waiter, passing an opinion upon a modern elevator, as used in our "sky-scrapers."

Many old-fashioned English gardeners in this year of grace 1906, would not allow a hose to be used in their greenhouses, while here the prejudice has been overcome and hoses are now universally used. Even our friend McGorum uses one.

Mr. Louis Wittbold is one of the five sons of George Wittbold, the veteran florist of Chicago, who has during his life-time built up one of the largest businesses in the west, and who has handed down to his sons some of his energy and initiative. It will not be necessary for your "old fogie" correspondents to go so far away from home as Chicago to see the device in operation. It will probably be installed in the near future in their midst, then they will know more about it than they do at present.

I consider that Mr. Wittbold's device has much merit. As he says, "it is not a panacea for all business ills," neither is a lawn sprinkler or the ordinary hose, yet they are "watering devices" and have been made adaptable, and the new device will ultimately find its own peculiar sphere of usefulness in like manner.

Mr. Wittbold should send information to our above mentioned friends regarding his device and look up future numbers of HORTICULTURE for a record of their conversion.

J. McHUTCHISON.

MECHANICAL WATERING SATISFACTORY.

Editor HORTICULTURE:—

Dear Sir:—I notice in your columns some controversy on watering machines and mechanical watering, which subject seems to be up for discussion by the trade. While I have no desire to mix in the debate, I wish to say that I think few readers have the correct idea, hence are not sufficiently informed or interested to intelligently discuss the situation. After several months study and experimenting with watering machines, I am positive that same are a grand success, and that the trade will soon see it the same way.

We have our entire establishment

equipped with an improved system, and we are more than pleased with it. Our houses are 200x27 feet; we water with two runs of pipe in each house; these pipes are fed from the end and decrease in size from 1-1/4 in. down as they approach the farther end. The nozzles are placed 16 ft. apart, screwed in 1-2 in. tees. They throw a flat spray similar to a gas jet, making a perfect even shower the full length of the house and not more than 4 inches wide where it strikes the bench. The spray can be directed to either bench or any angle by turning the pipe. A person can form little idea of the perfect working of the system without seeing it in operation or a photo of it. I do our watering now in one hour (all seven houses); formerly took two men all morning, and I can do it better at that. Did you ever think of it before, that you do not get the same amount of water on all parts of the bench when watering with the hose? I might add that we are not growing anything this season but vegetables, but would use the same system whatever the crop, and make it work perfectly. While I would not advise a grower to let the boys experiment with one on a house of Farleyense or Lorraines I would advise all greenhouse men to try one length in some house and see for themselves.

Of course there will be obstacles to overcome with some crops, but they will be overcome, and the watering machine will soon be installed in most up-to-date places. W. B. DAVIS.

CLEANING DODDER-INFESTED ALFALFA SEED.

F. C. Stewart and H. J. Eustace, N. Y. Agricultural Experiment Station.

Recent experiments show that almost any alfalfa seed on the market may be made practically free from dodder and safe to sow by careful hand sifting through a wire sieve having twenty meshes to the inch. A cheap serviceable sieve for the purpose may be made by constructing a light, wooden frame about 12 inches square by three inches deep and tacking over the bottom of it twenty-mesh wire screen made of No. 32 (English gauge) round wire.

One-fourth to one-half pound of seed should be put in the sieve at a time and vigorously shaken during one-half minute. A man should be able to clean from five to ten bushels of seed per day.

Dealers in alfalfa seed should either sift all the seed they sell or else provide their customers with the means of doing the work themselves. Dodder is so troublesome a weed that no one can afford to take the risk of sowing unsifted seed.

The Station will furnish free samples of dodder seed upon request.

"DID MOST SATISFACTORY BUSINESS."

Editor HORTICULTURE:—

Concerning our advertising for this year we are glad to state that just as soon as we have looked over our stock of bulbs you shall certainly hear from us, as we did most satisfactory business through you last season.

Very truly,

POAT BROS.

PERSONAL.

James Hutchinson, formerly gardener for Oakes Ames at North Easton, Mass., has taken a position with Dr. Shafer at Pittsburg, Pa.

E. W. Pierce, of A. H. Hews & Co., Cambridge, Mass., who has been ill for two weeks, is now all right again and at the post of duty.

Clarence M. Stark, the wealthy nursery man of Missouri, whose disappearance at San Antonio, Texas, April 1, caused a sensation, and who was traced to a boarding house, is now in a private sanitarium, an institution where he was being treated prior to his disappearance. He was examined in the county court as to his mental condition, and it was found upon the testimony of the county physician and other medical experts that he was unsound. His wife, who is with him, states that she expects to remain with him until the summer months, when she may take him to Wisconsin, where he was under treatment before coming to San Antonio.

NEW MANAGEMENT.

Philip Breitmeyer was, on April 10, appointed park commissioner for the city of Detroit by Mayor Codd. William Dilger was promptly appointed superintendent by Mr. Breitmeyer. This is a significant move in park management, and should Commissioner Breitmeyer, the successful florist and business man, and Mr. Dilger, the practical gardener, make a notable success in their new field, as we have every reason to believe they will, a point of inestimable value to the florist interests of the country will have been gained. We congratulate Detroit.

OBITUARY.

James Coke, private gardener, died at his home in Maynard, Mass., on April 7 of heart failure, from which he has been suffering for a number of years. Mr. Coke learned his trade in England, his father having been also a gardener. He was in charge of the Kennedy estate in Cambridge, Mass., for a number of years and also the Leavitt place, Cambridge, for six years thereafter. He was a man of fine character and excellent gardening ability. His age was 55 years.

Count Oswald de Kerchove died in Ghent, Belgium, on March 20, aged 82 years. Count Kerchove had been since 1878 president of the great Ghent Society for Agriculture and Botany, which gives an exhibition once every five years, and it was when engrossed in the work of preparation for the exhibition of 1908—the 100th anniversary of the society's birth—that he was called away. He was a well-known writer on horticultural subjects and author of two books on orchids and palms. Every plant grower in America is familiar with the beautiful pink and white azalea which bears his name.

NEWS OF THE CLUBS AND SOCIETIES.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The April meeting of this club was of the usual interesting character, and was well attended, considering the busy times for all hands, there being upwards of eighty members present, and the number of new applicants for membership being twenty-seven. The principal business of the evening was to listen to a paper by J. A. Pettigrew, on Street and Wayside Planting. This was identical with the address delivered by Mr. Pettigrew in March of last year before the North Shore Horticultural Society, and which we published in full in our issues of April 8 and April 15, 1905. We have on hand a few copies of those numbers, which we can spare for those of our readers who would like to peruse Mr. Pettigrew's admirable lecture. After the paper, an hour or two was spent in discussing the various topics touched upon. On the exhibition table were the following:

Ixias, from A. E. Shedd, Bussey Institution; Crinum Moorei, from E. P. Morse, Dedham; Anemone coronaria The Bride; and Anemone fulgens, from W. N. Craig; mignonette, from Alex. Downs; carnation Maxwellton (Enchantress x Mrs. T. W. Lawson), from S. J. Trepass, Glen Cove, N. Y.; antirrhinum, from an unknown exhibitor, all of which were awarded honorable mention by the judges. It was announced by President Wheeler that the banquet and sociable to be held on April 25 would be a record-breaking event in the club's history and that at the May meeting a talk would be given by E. O. Orpet, on the subject, "The Making of a Gardener."

HARTFORD FLORISTS' CLUB.

The regular meeting of this club took place on Friday evening, 13th inst., President Huss in the chair. Owing to the rush of work incidental to Easter, the attendance was not large. Francis Canning, instructor of horticulture at the State Agricultural College, Amherst, Mass., was present and gave an interesting address on the work conducted there. Mr. Canning explained clearly the scope of the curriculum in the various branches as taught at Amherst, and compared the methods of imparting instruction with those which generally obtain in Europe.

Considering that, at the various State Agricultural Colleges, a general education is given, with special training along horticultural or agricultural lines, and that for many operations the student is paid a regular wage, the youth of the United States have opportunities and advantages not usually obtained in Europe. Mr. Canning closed his remarks with the truism that, notwithstanding the facilities offered to acquire a college training in

the several branches of horticulture, ultimate success still depends on the man himself. The lecturer received a hearty vote of thanks for his address.

A discussion took place as to the advisability of amalgamating our Florists' Club with the Connecticut Horticultural Society, and this important step will be considered at a future meeting. ALEX. CUMMING.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Department of Plant Registration.

Ant. C. Zvolanek, Bound Brook, N. J., submits for registration the following blooming sweet peas:

1. Mrs. J. F. Hannay, pink, self color, seedling from Mrs. William Sim x Mrs. E. Wild.

2. Marion Staniford, standard maroon, wings blue, seedling from Christmas Captain x No. 93.

3. Miss Jossie Riedley, lavender pink, seedling from Florence Denzer x Mrs. Alex. Wallace.

The sweet pea registered by A. C. Zvolanek as Mrs. T. J. Dolansky should be Mrs. F. J. Dolansky.

WM. J. STEWART, Secretary.

FLOWER SHOW AT PASADENA, CAL.

Pasadena's first annual flower show, held on April 5, 6 and 7, was a most gratifying success, the exhibits counting up into the hundreds and the attendance of the public excellent. The mayor opened the show with a short address. Sixty-one classes had been provided for, but many extra and special entries came in late, which made a number of additional classes necessary. Among the exhibitors winning first prizes were the following:

Wright Flower Shop, American Beauty (silver cup); J. W. Wolfskill, 25 carnations (silver cup), bouquet; Woods Floral Co., Watsonia Ardernei (silver cup) stocks, scabiosa; Park Nursery, palms, rex begonias, flowering begonias, Asparagus plumosus, collection of economic tropical plants; Hotel Green, decorative plants, Asparagus Sprengeri, ornamental plants; F. E. Wilcox, J. Augustine, gardener, lilacs, cinerarias, collection of flowering plants; E. C. Sturtevant, water lilies (silver cup); Mrs. Fowler, J. Blake, gardener, 12 carnations (silver cup) calendulas; Dr. Schiffman, orchids, adiantums; C. H. Hovey, geraniums; L. Newman, P. J. Jannock, gardener, Bride roses, verbenas; Smith Bros., poppies, bulbous cut flowers; F. T. Holder, bougainvillea, antirrhinums; Mrs. Singer, foliage plants; Mrs. Watson, acacia; H. Bournder, cacti; J. Ainton, Shasta daisies; M. Bookdorf, violets; L. Hurlbut, pansies; L. Lambert, sweet peas; Mrs. Clark, iris; Mrs. Fitzgerald, marguerites.

CLUBS AND SOCIETY NOTES.

The State Horticultural Society met at Salt Lake City, Utah, on April 5 and listened to interesting addresses from the president, Thomas Judd, and others.

C. L. Simons, who for the past four years has been president of the Amateur Horticultural Society of Springfield, Mass., resigned his office at the meeting on April 6.

The State Florists' Association of Indiana held its annual exhibit at the State House, Indianapolis, on April 9. Glendale among the carnations and Richmond in roses attracted marked attention.

The Home Gardening Association of Cleveland, O., has opened an additional exchange garden on East 115th street for its work this season. Through the assistance of florists and others 20,000 plants and shrubs were distributed to schools and small home gardens last year.

A Florists' Club has been organized in Salt Lake City, Utah, with the following officers: President, Charles Alt; vice-president, L. M. Law; secretary, Charles Butchart; treasurer, W. H. King; sergeant-at-arms, Fred Laker. It starts with a membership of over 20.

NEWS NOTES.

The greenhouses of A. P. Calder of Stoughton, Mass., were partially destroyed by fire on April 15, which caught in the engine room. Loss will be from \$500 to \$800.

Point Defiance Park, Tacoma, Wash., has received a large consignment of rare South American plants and seeds through the courtesy of Mrs. W. B. Gibbons, a former resident of the city but a native of Valparaiso.

William Woods, gardener at Interlaken, the estate of Cortland Field Bishop at Lenox, Mass., disappeared on the night of April 5. He had notified the superintendent that he would complete his duties on the 15th, and it is thought by his wife that he has gone to Canada, his former home, in search of a position.

BUSINESS CHANGES.

W. J. Schoonman has established a florist and nursery business on the Lewis Gleason place, Danielson, Conn.

Edward Sceery of Paterson, N. J., has opened a branch store in Passaic, corner of Bloomfield and Main avenues.

The Ansonia Floral Company, which has extensive greenhouses on North Main St., in Ansonia, Ct., has opened a branch store at 70 Elizabeth street, where all orders for cut flowers, plants and funeral floral offerings will be promptly attended to. The company has built up a large business in a neighboring city and now opens a store here to meet its trade, which has constantly been increasing in Derby.

OUTDOOR ART

ADDRESS DELIVERED AT CLEVELAND, OHIO,

October 6, 1905.

Outdoor art is fine art. It is the art of making and saving living pictures that painters will paint. That person who has a genuine appreciation of nature, whether it be for the little things that grow, or the great landscapes of sky and earth and water has the instincts of an artist. He may not have the technical skill to depict upon paper the aspect and pose of a fern, flower or tree, or to place upon canvas the fleeting expressions of nature that most appeal to him, but he can recognize the beauties and deficiencies of the common things and common scenes about him, he can use his influence to preserve the beauty and supply the deficiencies, and the measure of his success in this work will carry his name as far down the vista of time as will most of the work that artists do. More people and more generations of people may gain a mental, moral and physical uplift from the living picture of a really beautiful landscape with its never ending change with the procession of the seasons than from any landscape upon canvas. In no respect would I belittle the work of the true artist. He who has the power to place upon canvas the brief periods of supreme beauty that every student of nature would like to preserve, or who can depict the beautiful compositions of mass, form, line, light and shade that nature can, but seldom does produce, without a blemish, speaks so commanding a note that the average man is compelled to stop and look and listen even though he does not understand. The student of a picture-gallery crowd can testify that while it will swarm and chatter about the street Arab story or home-parting scene, it will linger quietly and thoughtfully before the work of a master. You, who have studied the crowds in a public park, will realize that while they will also gather for a brief period about the showy flower beds with expressions of wonder and admiration, they will spend the day where there are beautiful landscapes.

I believe the average taste of the public is correct, and that it does appreciate a really beautiful thing. In evidence of this, I only need to point to the tremendously rapid growth of the sentiment and practice that is represented by the membership of this Association. We need more teachers who are competent to teach, and such teachers are rapidly developing, more disciples of outdoor art who will look beyond the pretty flower bed and the neat yard to the permanent improvement of their towns on broader lines; and who will set about to acquire the fine trees, the beautiful passages of landscape that will fit into the broader scheme. You will say that public reservations are expensive and that you have not the means or influence to secure them. I say that you are wrong

in this assumption, for if you really have the instinct of the artist, and a real love for the beauty in nature because of its beauty, and not because the individuals or publications to whom you look for your ideas assert it, you will be able to sway others to see as you do, at least enough to give of the abundance of their land or their money.

Let me give you a few leaves from my book of experience to show how often a suggestion may fall in fallow ground. A Park Commission having an appropriation sufficient only to purchase the park land of a proposed extensive park system was told that they must acquire their park-ways by gift from property owners. This was unanimously declared impossible, but an opportunity to divide into house lots a six hundred acre tract on the line of the proposed park-way made it possible to provide liberally for this park-way, and to secure the sixty acres needed therein as a gift to the city. Another unconvinced property owner, after having seen the benefits and beauty of park-ways in another city was convinced, and now offers to give with equal liberality. Three other large property owners are doing the same, and it now appears certain that nearly the whole of the park-way land will be secured thus, or from public holdings established for other purposes.

In a small city of the northwest, a large body of primitive pine upon the shores of a beautiful stream much used for pleasure boating was to be cut for the last bite to a big saw-mill that was about to be closed for all time, owing to the exhaustion of its forest supply. The suggestion made to a member of the lumber company that the preservation of lines of trees along the bluff, and groups of trees at prominent points would preserve the essence of all the unique beauty of a stream that would only be common-place after the pines were cut. He was doubtful, as it represented a large asset. At another visit the same ground was gone over, and the same suggestions made to another member of the firm, who seemed coldly non-committal. At the next visit, the mills were dismantled, and a million feet of lumber had been saved to preserve the beauty of the stream. Not only this, but also a large number of splendid old trees along the shore of the great water-power pond, as well as on the bluffs in the heart of the town, all of which might have gone to the mills had the owners so willed.

In a small town in eastern Massachusetts was a high hill-top, from which the finest view in the town was to be secured. The supposed owner, the village grocer, was approached

AND CRAFT

BEFORE AMERICAN CIVIC ASSOCIATION.

By Warren H. Manning.

with the suggestion that it be given to an Association who would hold it open to the public for all time. He assented promptly, but found his land did not take in the summit. He believed it belonged to a hard-working, but well-to-do farmer. This farmer was approached, first with the suggestion that he save a fine old hemlock on the hillside. With a good deal of emphasis he stated that he had been saving that tree for nearly fifty years. He, too, offered to give land at the summit, but it was found that his holdings did not reach it. The store-keeper purchased sixty acres for the purpose of carrying out his intention. Then the project for a woodland reservation one hundred feet wide and nearly three miles long was suggested, with the expectation that the owners would give the land. Already nearly one-third of the land required had been promised, and this in a so-called non-progressive farming community. In this same community it was the practice of the lumbermen to cut to the roadside. It was found only necessary in most cases to call the attention of the lumbermen to the desirability of preserving all the road side growth to secure its preservation, and one lumberman, having no personal interest in the town, saved a large and fine oak of considerable commercial value upon the suggestion that it would be a fine thing for him to do, and because he cared for the beauty of the tree as well. The suggestion to individuals owning particularly fine trees that they deed these trees to the Village Improvement Association, has met with a favorable response, and papers are being prepared for the preservation of several such trees. It has been my experience that there are very many land and tree owners who care so much for such beauty that they are willing to make a considerable sacrifice to preserve it, if the agency is provided, and if they are approached in the proper spirit. Think how such memorials will grow in beauty even if neglected, for Nature is forever building her creations as fast as they decay, and ruthlessly tearing down the creations that man has made of material gained by despoiling Nature.

How many unendowed or endowed memorial buildings, or other structures, in towns or on college campus, erected fifty or more years ago, are standing to-day, and how many are likely to stand fifty years more, when you consider the short period of a building's usefulness, and the tendency of towns and colleges to live so close to their income as to only maintain useful things, especially if the cost of maintenance is a considerable item? How many of the donors of fifty years ago would be proud of their gifts were they to see them associated with the better work of to-day?

There are many beautiful trees and

landscapes that have been growing and will continue to grow for centuries, that are certain of destruction sooner or later if in private hands, for there is no entailment of estates in this country that will keep them for centuries in a family. The only assurance for the preservation of such objects lies in their being placed permanently in the hands of some legally constituted body of officials or citizens' associations with the power to hold and administer the land and keep it open to the public for all time, with moneys secured from taxation, from gift, or from the property itself. There are dangers to be guarded against, however.

Until the time comes when such intrinsically valuable natural resources upon a public reservation as minerals, forests and waters, will be managed honestly for the benefit of the public, with a proper regard for aesthetic, as well as economic returns, such resources will be a serious menace to the public interests, and will compel a constant fight to prevent private parties from destroying that which is of the greatest value to the public. For example, it would appear that in spite of all the protest that has been made against such desecration, Niagara Falls is doomed. On one side, the power rights upon a reservation acquired for the people, have been sold for a mess of pottage. We have heard how public-spirited the Power Companies are in providing a very large fund for the maintenance of the public park, but when the Power Companies have taken all the water from Niagara Falls how impossible it will be with all the money that can be secured from the power generated by this water to construct artificially a natural object as fine or as impressive as the Falls now are.

Another danger comes from the opportunities that are offered for political patronage in our parks or park systems that have been and are expensive to acquire, to construct and to maintain. Where there is much patronage this control is pretty sure to pass from the group of public-spirited and self-sacrificing men who initiated the park movement and established the parks, to the politician. Not only is this true of the city, but it often is true of the small towns where similar political conditions prevail in a small way.

Again the great taxable value of such large reservations in the heart of a city, as Boston Common, New York Central Park, have led to repeated efforts to secure some portions of the park for commercial use for public institutes or public buildings. The Subway is already in the edge of both Boston's Common and its Public Gardens and a group of museums is spreading over a considerable portion of Central Park, and propositions to run streets through these reservations crops out periodically. It should be borne in mind, however, that neither of these reservations were originally designed to be a part of a modern park system.

It is such considerations that lead me to believe that it is not always wise to include in our city park system very large bodies of land having a high taxable value, especially where they form a barrier to direct lines of travel, as does Central Park of New York. Furthermore, the fact that the

electric car lines and the automobile make the range of a daily outing so much greater than was possible a few years ago with the horse, that our public pleasure road system must be much more extensive than they are now to serve the needs of that part of the public who pay the largest share of the taxes, while the requirements of the people in moderate circumstances who most need the parks, should be supplied by the isolated small local playgrounds, or playgrounds upon broadenings in adjacent park-ways to which these people may walk daily. They cannot go daily to the large parks, for they are at such a distance that they must pay car fares to reach them. Undoubtedly the present nuclei of town, city, county, state and national parks will expand into a national system, in which the steam roads, already great national park-ways, and the electric, automobile and carriage roads will have their logical place. It will be a system based first upon practical consideration, the reservations being governed by the topography, and so located as to include the natural lines of travel, as the railroads are now located along stream valleys, which are also the natural lines of drainage.

You are asking by this time what this has to do with my Outdoor Art proposition, which you may from its designation regard as an æsthetic consideration only. If you do, I want to protest against your disposition to set a barrier between beauty and utility, for the more you think and observe the more you will be convinced that they go hand in hand and that intrinsic values are depending more and more upon beauty, a gospel that should be preached and preached.

Bear in mind that our modern park systems are very generally extended to include the valleys and shores of streams, the shores of ponds, the high bluffs along stream valleys, and the summits of hills, land of the smallest commercial value on account of occasional submergence or its inaccessibility, the land that the owners are most likely to give for a public reservation because of its low value, the land that has been neglected and thereby allowed to acquire a beautiful growth of trees and shrubs.

I would again place emphasis upon the fact that those who would enduringly improve their town must do more than to encourage the planting of flower beds and cleaning of yards. These are important details and they all help to educate public sentiment in the right way. This, however, is not the kind of work that is likely to enlist the earnest support of the most far-seeing business and professional men,—the men who prefer to do big things. Such men when they once realize the importance and value of a comprehensive plan of the town that will include in a public reservation system the land of little value, but of great beauty, will put in work that will count.

This Association, and the majority of its departments are enlisted in educating the people up to the point where they will do just such work as I have outlined. I conceive it to be the special work of the Outdoor Art Department to help the people to gain a fuller appreciation of the real beauty of the common scenes and objects about them that can be acquired and

developed at small cost to show them how they can again at small cost make many hideous objects and scenes attractive. I would place special emphasis upon the small cost, because I believe if we are to have a more beautiful America, we must enlist the multitude who have small means, as well as the comparatively few with large resources.

CALIFORNIA NOTES.

The last session of the legislature \$150,000 was appropriated to buy an experimental farm for the University of California. During the last several months the committee of soil experts on selection have carefully examined the twenty-seven farms offered to the state for this purpose and this week the selection was made of Yolo county farm near the town of Davisville.

There are brisk doings also in the Fresno raisin field. The prices are edging up, and some packers are offering 3 1/2 cents a pound, although the standard quotations are 3 1/4 cents. At a meeting of raisin growers in Dinuba district last week a pool of one thousand tons of fruit was sold under three-years' contract at 3 1/4 cents to packers. This is the first contract for a large amount made by packers for ahead business for some time and indicates the activity that characterizes the market and the prospects for still higher figures.

At the fortnightly meeting on the 7th instant of the Pacific Coast Horticultural Society, the president, J. W. Bagge, read an original paper of entertaining merit, his subject being the gladiolus. A measure was introduced at this meeting and given its first of three necessary readings before action, the purport being to have only one meeting of the association a month. The arguments advanced by the proponents of the measure was that the members are in the habit of turning out well at the first meeting in the month and not nearly as well at the second.

In the San Joaquin Valley the ravages of the blight are expected to reduce the yield one-third. About Armona many orchards have been partially put out of business as far as this season is concerned. In the Visalia district the damage is considerable, and the packing and canning interests are seriously alarmed for supplies in that quarter. The Reedley district in this county is said to be afflicted to a large extent, and the blight has made its appearance in Oleander and Easton districts.

Several horticulturists are in the city this week from Fresno, the great dried-fruit district of California. The news they bring is that "dried fruit is soaring;" that the price of peaches has gone to 8 cents a pound, which is said to be the record up to this time in the State, a price that assures the grower of a return of from \$350 to \$400 an acre from his land. There were some sales last year at 8 cents, but the prevailing rate was 7 cents. Only packers who sold short and were caught without stock to make good their speculation were buyers at the higher figure. This time 8 cents is the standard, and growers are not hurrying over each other at that to dispose of their crop. There is a big growing demand, a prospect of a

short crop. The canners, not to be behind in the race, are out with \$35 and \$40 offers for green stock and are buying from all comers. There is but little hold-over stock. An estimate made last week gives only fifty carloads in all for the entire San Joaquin Valley, not enough to cut much of a figure in the market, hence the eastern consumers will have to pay a little extra this year, especially since there is a reputed prospect of a big shortage in the eastern crop, which must be taken into calculation.

NEW YORK AGRICULTURAL EXPERIMENT STATION.

BULLETIN 273.

The San Jose scale is still with us; and only increasing, careful work will prevent its destructive spread in many fruit sections of the State. A timely word on the subject is given in Bulletin No. 273 of the Station at Geneva. The experiments conducted by the Station in 1904 and 1905 indicate that the lime and sulphur wash, boiled by fire or steam, is the most reliable of all remedies so far tested; and that this mixture is safe to use, in most cases, as a fall, or as a winter and spring application.

The kerosene-limoid combinations have not proven effective in Station tests; and in many cases have caused injury.

The miscible, or soluble, oils, as represented by Scalecide, have given some good and some unfavorable results. They require further testing before they can be recommended.

If interested the bulletin may be obtained free by requesting a copy from the Station.

Glenside, Pa., March 31, 1906.

HAMMOND'S SLUG SHOT WORKS, Fishkill-on-Hudson, N. Y.

Gentlemen:—Seeing "Horicum" mentioned in Monthly Bulletin of Div. of Zoology, Penna., I would thank you to inform me where I can get a supply, say about a gallon for trial.

The San Jose Scale is very bad in our section and I am glad to hear of a good remedy. I will try it, especially as it is so easy to use. I will be glad to hear of any other remedy.

Your early reply will be greatly appreciated.
P. S. Glenside is twelve miles from Philadelphia.

How this Railroad Station Was Improved.

In the spring of 1905 the grounds of the Erie station at Tallmadge, Ohio, were in a very bad condition—a blot on the landscape and a disgrace to the railroad. When the depot was built 12 years before, a tidy park lying in the angle of the highway and tracks was graded and grassed and three evergreens and a catalpa set out. I think the agent paid for the trees. He took great interest in the appearance of the grounds, and while he stayed they were kept in nice order, with a miscellaneous flower bed of rectangular form about 7x30 feet. He moved away, and soon after an interlocking system connecting the double tracks east with the single one west, was installed; business and number of trains increased, and succeeding agents had enough to do without mowing lawns. In the spring of 1904 the writer, who was supervisor of highways at the time, was appointed a committee by the village improvement society to labor with the railroad management with a view of having the grounds kept tidy, and if possible adorned with flowers. I was met with blunt refusal, the reason adduced being that the road was being managed with the most rigid economy. After much cogitation I settled upon a plan of action. It was to have the society furnish a good lawn mower, provided the section boss would furnish a man to use it, and I would furnish the cannas for a large and showy bed. At the April annual meeting of the Improvement Society the mower was unanimously voted for, and I put the proposition in writing to the subdivision supervisor of the Erie tracks. He O. K'd. it, and the section boss cleaned up the lawn and spaded the flower bed, which had the remains of last year's weeds, some self-sown petunias and some scattering perennial poppies.

On the 27th of May, I planted an ordered bed of 35 dwarf petunias, 12 5's. At other end of the track I

placed a circular bed 40 inches in diameter of twenty dwarf petunias of the finest strain I have ever seen. These were in bud and showed considerable bloom on Memorial Day, three days later. The cannas were from five-inch pots and began to bloom in two weeks. They had also the advantage of the bronze foliage from the start. Concentric marks two inches apart were made in the fine soil around the beds and lawn grass seed sown in them, which by mid-July covered the ground and was mowed with the lawn. My proposition reserved my right to move and take the plants after Oct. 20. I sold four canna roots; three were stolen and the remaining 28 made nearly 200 divisions which I have at this writing nicely started in 3 and 4-inch pots. It will be seen that I used stock plants for ornamenting the station park, and thus kept my cake while the flower-loving public helped eat. The idea of thus using stock plants came to me several years ago when looking at Dreer's acres of cannas and other flowers, and again at a western establishment. Why not farm out cannas and phlox and dahlias where they will be appreciated and well cared for and take them back in the fall, or do as I did—borrow railroad parks for garden ground? I might add that in early November I planted the large bed to 216 early tulips in three colors a diagonal band of five rows across the middle separating the others. The round beds were planted to 40 hyacinths each, a high grade being used. This was wholly out-of-pocket business "for the good of the order," but as my neighbors and I go by nearly every day, it will be about as good as having them on the lawn at home.

L. B. PIERCE.

We extend our sincere sympathy to our—and everybody's friend, Philip J. Foley of Chicago, on the death of his five-year-old child. May sorrow so deep never again come to him is our heartfelt wish.

Harlan P. Kelsey has moved his office from 6 Beacon street, Boston, to Higginson Square, Salem, Mass.

EASTER MARKET REPORTS

BOSTON The Easter trade in this city was a phenomenal success for the plant growers, the largest on record for the retailers, a perfect whirlwind of business for the wholesalers doing a cut flower shipping trade, a fair success for the cut flower grower and a disappointment to those cut flower growers who had hoarded their material and expected to find a demand for it in Boston on Saturday morning. Broadly speaking, local trade was poor as regards flowers in general, with the exception of lilies, which were in supply insufficient for the call. Lily of the valley, violets and pink sweet peas sold unexpectedly well, but, as in the case of all cut flowers, generally, it was the out-of-town demand from practically every New England community that did the business and marked the great gap between the aggregate results to the shipper and those to the grower for local distribution.

In the city it was decidedly a plant Easter. Lily plants sold out clean everywhere. Azaleas, hydrangeas and the general run of Easter flowering plants made a fine record, the only laggard of note being the Crimson Rambler rose which, judged by the standard of other cities, was held at rather high figures. The retailers gave most of their attention to the plant interests all through the week, and not until Saturday did they have much to say about flowers. The weather on Saturday especially was superb, and such crowds of people as thronged the streets and fairly overwhelmed the florists' stores have rarely been equalled on any occasion in this city.

Roses moved with exasperating slowness all through the week; there was no material advance in values, but the aggregate output was, of course, larger than under ordinary conditions. Carnations sold very well all along until Saturday morning when a slump of huge dimensions was inaugurated and the panic scenes of former days reenacted; the sufferers were the same perverse class that do it every year and can be depended upon to do it next year regardless of their repeated unfortunate experiences. Lawson and Enchantress were the best sellers among the carnations; whites were the worst. An immense stock of daffodils and tulips was held over; wanted by nobody. Notwithstanding the fierce demand for lilies, callas had a very slow sale.

CHICAGO Chicago was very unfortunate as to Easter weather. Conditions were all right up to Friday, which was showery and threatening; Saturday was cold with high wind which interfered greatly with delivery of lilies and other plants, and Sunday was continued cold and stormy. It is the belief among all departments of the trade that had the weather been favorable the occasion would have broken all records. In the wholesale cut flower market roses and carnations started to shorten up in quantity early in the week, shipping trade being quite heavy and the usual dilatory tactics of the grower in holding back to look having been adopted, with the result that on Saturday there were large quanti-

ties of carnations of all grades to be had at buyers' valuation. At no time, however, was there any surplus of choice roses, this being the only item on the list that could be designated as in short supply. Long-stemmed Beauties and other high-grade roses were cleaned up promptly on receipt and brought excellent prices. The demand for the newer varieties of roses was a prominent feature. In carnations the best call was for Lady Bountiful and the large red varieties. Good tulips were scarce, but there were too many daffodils. Violets sold well, but the quality was generally inferior. Smilax was very scarce and this brought about an unusual demand for asparagus strings. Callas were abundant. Lilies sold well at quoted rates. Generally speaking, the wholesale houses cleaned up satisfactorily, except on carnations and the poorer grades of bulb flowers. The retail stores all report the plant business to have been equal to or in excess of that of last year. Almost without exception they declare the cut flower business to have been less. Only those who bought carefully were able to clean up on cut flowers. All admit that the cut flower trade was below anticipations, although it is also admitted that the inclemency of the weather may have had some effect in curtailing sales. Violets are credited with more nearly approaching normal demand than did most other staples. All reports show a heavy preponderance of plant sales as compared with cut flowers.

CINCINNATI We were favored with good weather for two weeks preceding Easter, and all stock showed a vast improvement in quantity and quality. Cut flowers were plentiful and the demand was greater than ever before in the history of the florist business. There was just enough stock to supply everyone with what was wanted and at a fair price. The commission men could have handled a great many more roses and carnations for shipping purposes, and were obliged to turn down many orders from the out-of-town florists. Bulbous stock was in fine condition and met with great favor with the public, as the bulk of the demand was for what they termed Easter flowers. There was no corresponding increase in the demand for plants; flowering plants were not plentiful and were not pushed to any extent, Harrisii lilies excepted. Saturday was a fine spring day and the streets were thronged with shoppers, and never before were seen so many people carrying flowers. Sunday morning florists' boys and wagons were as plentiful as street cars. The Sixth street flower market was thronged with people till near the midnight hour, and comparatively few of the visitors could resist the temptation to buy. It was a great Easter. Everybody is satisfied and all join in pronouncing it the best they ever had.

CLEVELAND In comparison with last year this Easter's trade comes up to the expectations of the retailers as well as the growers, who of course have disposed of their stock first. Potted plants, all kinds, sold well. It

rained most all Saturday and Sunday, but this proved no damper to the spirit of buying. Everybody is cleaned up and all are very well satisfied. Some of the stores showed some pretty conceits in Easter novelties, such as large eggs concealing dainty bunches of violets, lily of the valley and pansies. Every Easter the Sheriff street market florists have a show and prizes are given. G. M. Wanman got 1st prize, Mrs. Gamble 2d, and Casper Aul 3d.

COLUMBUS It is always difficult to tell in the absence of exact figures how one holiday compares with another; but the most conservative opinion of the trade here is that the total volume of Easter business was at least 20 per cent more than a year ago. The number of plants disposed of was enormous, and included everything in seasonable stock. Of lilies there were not enough to go round. Saturday noon saw the end of them. What azaleas there were found ready sale. Of potted blooming hyacinths, tulips, narcissus, and other bulb stock there was a better quantity; but all went. One of the quickest sellers was *Spiraea Gladstone*. Specimen *Crimson*, and *Philadelphia Ramblers*, *Baby Ramblers*, etc., sold out clean.

The story in cut flowers is soon told; every employe who could take money was putting out the goods; everything went fast and furious and there was no time for boxes or delivery in the late afternoon and evening.

The business done for **LOUISVILLE** Easter probably surpassed any we have ever experienced. Stock in general was in satisfactory supply, and the quality averaged unusually good on carnations. Violets are short in supply and quality, the demand being very good. Lilies of the valley sell fairly well, and are in great supply. Bulbous stock is somewhat scarce.

While enthusiasm is **NEW YORK** not wholly absent from the story of the Easter experience of the wholesale and retail trade of this city, yet it is scattering in quantity and mild in quality. Probably it would seem from all the sources of information available that the holiday has lost permanently its prominence as a cut-flower festival and clinched its reputation as the great plant event of the year. The plant growers did their part in splendid form. The greater part of their product was sold weeks in advance and their only solicitude was as to its delivery, which proved to be easy on account of favoring weather. The variety provided did not differ noticeably from that of last year, no new thing being seen in any great quantity and no old favorite, except possibly the genista, showing especial weakness. Hydrangeas seemed finer than usual; Rambler roses were more uniformly bright in color; ericas were less abundant; azaleas were splendidly flowered and less stiff in outline; lilacs were the best ever seen here; rhododendrons, metrosideros, acacias, bougainvilleas and a few other things appeared to be in reduced quantity. Pans of bulbous stock were superior. As to the lily, the great Easter spec-

WHOLESALE
GROWER OF

CUT FLOWERS

VICTORY

We do not need to advertise Victory aggressively any longer. We are making prompt deliveries of Cuttings daily and are giving universal satisfaction. ENOUGH SAID!

ality, reports and opinions vary greatly. It certainly displayed no increased popularity and evidences of waning influence were not lacking. This may have been the result, in part, of the quality which, with many growers, was very far below standard. The sale of plant collections in baskets, hampers, etc., was, as usual in New York, quite large, but it is doubtful if this particular line increased much over previous years, the increase in sales being more generally apparent in individual plants. These were as a rule sold with some kind of a pot covering and more or less ribbon finishing, either satin or wood, but the tissue paper swathing so common here for several seasons has been abandoned by most retailers of the better class. The number of plants left over in any store was very small.

The cut flower trade did not at any time develop extraordinary activity. The supply, taken as a whole, was light and it was fortunate it was so, as it was due to this fact, and no other, that it escaped a disaster, for Sunday morning opened with a dismal, teeming rain and the expected demand was thus completely cut off. A larger proportion of the left-over stock than usual was in the hands of the retailers and some of the wholesalers had managed to unload nearly everything of value before the storm broke. These remarks cover about everything except violets. Here, indeed, was a Waterloo. Given the brightest, balmy Easter morning that ever dawned and it would have been beyond the possibilities to find outlet for the avalanche of violets that poured into this market Saturday afternoon. The American Express alone brought 1000 cases, each containing from 2500 to 6000 violets; this accounts for the "up-Hudson" supply only. Much of this could have been placed through the week previous at fair figures had the growers not hoarded it; as it was, the great majority laid in the crates untouched until Monday, when, if lucky, it went to the Greeks for something to cover express charges. Other stock that lagged badly comprised red carnations, bulbous stock, mignonette, and the better grades of Bride and Bridesmaid roses. Lily of the valley, on the other hand, made a splendid record. There was no marked advance in the wholesale value of any cut flower; a few small lots of especial merit touched figures that might be called fancy and really first-class cut lilies held to top quotations, but outside of these exceptions ordinary prices prevailed.

There was a large and **NEWPORT** more profitable business done in plants and cut flowers at Easter this year than on any previous occasion on record.

Prices were in advance of last year on almost every item. A greater variety of plants than usual tempted purchasers, with the result that more business than was anticipated was done in other plants than lilies, the usual exclusive requisite of Easter plant buyers. When it came to Saturday afternoon nearly every dealer in town realized that there would not be lilies enough to supply the demand. Azaleas, hydrangeas, rhododendrons, genistas and Baby Rambler roses sold readily at good prices. In cut flowers, lilies, of course, were more in demand than anything else. Roses and carnations, nevertheless sold in large numbers at prices varying to suit the occasion and conditions as they appeared to those who sold. Pansies sold very well and geraniums in bloom disappeared quickly. Pansies were used effectively in neat little baskets, the plants bringing enough to at least pay for their growing. There were no novelties offered, but even without novelties it was a satisfactory Easter for everybody.

Growers, wholesalers and **PHILADELPHIA** retailers all agree as to Easter that they are sore but satisfied. There

was big business for everybody—the weather was splendid and there were no surpluses to speak of, a combination for which all are duly thankful. Here in Philadelphia it was a poor home that did not have a few flowers in its windows. And as for the churches never were the decorations so lavish or attractive, especially in the Catholic and Episcopalian denominations. Even the revival meetings of Torrey and Alexander were brightened up by a sprinkling of lilies and azaleas. The aggregate of material disposed of in the stores and on the streets and from the greenhouses direct was never greater and good prices were realized, especially towards the windup. Lilies were a scarce article and thousands more could have been disposed of. Lots of 20 and 30 thousand were sold early to the department stores at 8 cents, which would have easily brought 12 and 15 cents later in the week through the regular channels. On Saturday many out-of-town orders for 500 and 1000 pots remained unfilled. April weddings will have to go without lilies this year or pay well to the fortunate grower who has a late crop. Twelfth street was a Covent Garden this year with the Battles' establishments on one side and Acker's on the other. Graham had an annex at 108 South 13th street. Pennock Bros. declared that their business had beaten all records this year. Faulkner, Crawford, Craig, Kift, Habermehl and others all reported inability to take care of all the business that came in. Among the wholesalers

we found a similar cheerful condition. Baker, Reid, McKissick, Niessen and Pennock all reported satisfactory business. Niessen cleaned out well on all lines except cut tulips. Pennock with his immense force was taxed to the utmost night and day, but got through with but little friction. The growers who sold their plants on the street sold out clean by midnight Saturday.

PHILADELPHIA NOTES.

Jno. Westcott has been in poor health since his return from Florida. A visit to the Waretown Sanitarium seems to have helped him a little, but he is still far from his old self. On the 17th he went for a short stay at Atlantic City.

Paul Berkowitz, of H. Bayersdorfer & Co., is back at his desk in Philadelphia after an extensive trip among the bright lights in the trade. He will hold the helm while his partner, H. Bayersdorfer, is in Europe.

It is rumored that a big change is imminent in the personnel of two of the big seed houses in this city. While we believe we have full information on the subject, we prefer to report full developments later.

Abraham Pennock, the veteran Philadelphia florist, announces his intention of staying for the summer in Florida.

Jno. Hedland, gardener to Mrs. G. W. Elkins, exhibited a pair of fine hydrangeas at the monthly meeting of the Pennsylvania Horticultural Society, capturing a Bodine first, with same on the 17th inst. Wm. Robertson took first for hot house cucumbers, Thos. Holland first for cinerarias in the Michell section, while Joseph Hurley took first in the Dreer column for a collection of perennials.

AS A RULE

too little attention is paid to the quality of materials that go into your greenhouse and too much to the price. When a man talks price on Cypress materials, keep in mind that a good thing always costs, and it always costs not to have a good thing.

We furnish only the good thing.

HITCHINGS & COMPANY,
Greenhouse Designers and Builders,
Manufacturers of Heating and Ventilating Apparatus

New Castle, Ind.—William Dittmann, three houses; Benthley-Coatsworth Co., three houses; Weiland & Clinger, three houses.

NEW FERTILIZER.

Consul Worman, of Three Rivers, writes that the Canadian agent in Norway reports from Christiania that a new fertilizing product, nitrate of calcium, concerning which he has sent a full report under date of January 4, 1906, and called the "Birkiland fertilizer," is manufactured from the nitrogen of the atmosphere, and its price has been fixed at \$4.13 per 220 1-2 pounds to farmers, while Chile saltpeter costs them \$5.33 for the same weight. Experiments last summer have proved that the two fertilizers are very near of equal value

to plants. Just now the fertilizer should have special attention from those who have hitherto used kali from Germany, which product a German trust is advancing in price to an unreasonable figure.

Three Sterling Carnation Novelties

Winsor, White Enchantress, and Helen M. Could

There is nothing about any of these varieties that we wish to conceal; therefore, we cordially invite all carnation growers to pay us a visit. Come at any time.

WINSOR—Winner of Lawson Silver Medal.

This is sure to prove a winner. Nothing approaches it in color, which is a clear silvery pink—a shade between Enchantress and Mrs. W. Lawson—and much more beautiful than either. In fact, it is just the shade that we have all been trying to get. The color will make it sell in any market. The stem is just right. The flowers are considerably larger than Lawson and much better shaped. As a grower it has everything that can be desired. So far we have not seen any large-flowering variety quite so free as Winsor.

WHITE ENCHANTRESS.

A pure white sport of Enchantress, at once the most popular and most profitable carnation grown today, on account of its size and stem and freedom with which it blooms. White Enchantress is identical in every respect but color. Those desiring quality as well as quantity will find it in White Enchantress.

HELEN M. COULD.

This is a beautiful variegated sport of Enchantress. The ground color is a lovely shade of clear pink, the variegation carmine, making an exquisite combination of colors, besides being something distinctly new. At a short distance the variegation does not show at all, the general effect being a beautiful shade of dark pink. Growth, habit, size, and stem are the same as Enchantress.

We have fine stocks, from which we can deliver healthy cuttings of Variegated Lawson, White Lawson, Red Lawson, Enchantress, Mrs. M. A. Patten, Lady Bountiful, etc.

Our Variegated Lawson is all that we claimed for it last season, and is giving the fullest satisfaction everywhere—the best in the variegated class. Come and inspect our stock of new and standard sorts

F. R. PIERSON CO.,

TARRYTOWN - ON-HUDSON, NEW YORK.

AT BOSTON

Robert Craig Wins Again

Not another scarlet carnation has been able to take first honors with **ROBERT CRAIG**.

The introducers of CRAIG fill all orders on time and send out only healthy, vigorous, well grown selected cuttings taken from blooming stems.

Carnations, Rooted Cuttings, Lillian Pond, Flora Hill, Joost, from soil, \$2.00 per 100.

C. EISELE, 11th and Roy Sts., Philadelphia

Some People have taken our advice as published in

these columns recently and are buying **My Maryland** for trial. We reiterate here—if it succeeds with you as it does with us, it will prove the best white carnation you ever grew. Despite the variety's apparent failure in several places, we strongly advise all growers to give it a trial. We have been frank about its faults as developed in other places. We doubt if these will develop in many places.

Jessica we believe, will succeed generally and will prove to be the best red and white variegated ever disseminated. Few varieties show as strong constitution as this one does, and it is a wonderful producer. Extra fine stock of both varieties ready now. R. C., \$2.50 per doz.; \$12.00 per 100; \$100.00 per 1000. Pot plants, \$1.00 per doz. extra.

Send for our catalog, now ready.

DREER'S SEASONABLE SPECIALS.

New Dwarf Giant Flowered Ageratum "Inimitable."

A revelation in Ageratums, flowers and truss double the size of the best varieties now on the market, habit compact very free, \$1.00 per dozen, \$8.00 per 100.

New Paris Daisy Queen Alexandra.

Has become very popular as an Easter plant this season. We introduced this plant to the American markets this year predicting a great future for it. Its popularity this season more than bears us out on this. 2½ inch pots, 60 cts. per dozen, \$4.00 per 100.

The finest Cactus Dahlia for Cutting, "Kriemhilde."

We can still supply field grown roots of this most popular Dahlia, \$1.25 per dozen, \$10.00 per 100.

New Cactus Dahlia, Victor van Scheffel.

On the general style of Kriemhilde, but of a more pleasing pink color even than that variety, undoubtedly destined to become a leading popular sort. Field roots, \$3.50 per dozen, \$25.00 per 100.

New White Cactus Dahlia, Florence M. Stredwick.

A variety that created a sensation in England as well as on the Continent during the past two seasons, awarded many first class certificates, undoubtedly the finest white Cactus Dahlia yet introduced. Green plants, 15 cts. each, 75 cts. per dozen, \$5.00 per 100.

Hybrid Tea Rose Killarney.

A fine lot of 5 inch pots, \$2.50 per dozen, \$20.00 per 100; 6 inch pots, \$3.50 per dozen, \$25.00 per 100.

Roses Baby Rambler.

4 inch pots, \$3.00 per dozen, \$25.00 per 100.
5 " " 4.50 " " 35.00 " "

Hybrid Tea Rose Killarney.

Strong two year old plants of this finest of all bedding Roses, \$4.00 per dozen, \$30.00 per 100.

Hybrid Perpetual Rose, Frau Karl Druschki.

This is really the first white Hybrid Perpetual Rose yet introduced, beautiful in color, a free bloomer, a healthy vigorous grower, fine two year old plants, \$3.00 per dozen, \$25.00 per 100.

We make a specialty of Roses in pots, large plants suitable to sell to your retail customers. Over 150,000 plants are now in 5 and 6 inch pots in the best possible condition for outdoor planting. We are Headquarters for Hardy Perennials, Aquatics, Water Lilies, Dahlias, Decorative Plants, Palms, Ferns, etc., as well as a general line of Florists' Stock, all of which is fully described in our current Wholesale List, a copy of which we shall be pleased to mail to any one in the trade. Issued quarterly.

Dendrobiums Wardianum and superbum Dearii

These two handsome species I grow during the growing season in the same house, where the temperature ranges from 60 degrees to 70 degrees at night, with a rise of 10 degrees or 15 degrees in day time. *Dendrobium superbum* should be watered very carefully and sparingly until the new growth is well rooted, otherwise these are very apt to damp off. If the atmosphere in the house is charged freely with moisture one thorough watering every ten to fifteen days will be sufficient; on bright sunny days they receive a light syringing early in the morning. When the young growth is well rooted the amount of water is increased and until the new bulbs reach maturity, the plants are watered every day. From the time the new growth is fully developed very little water is given until the following spring when the flower buds are developing and new growth starts in.

As soon as the new pseudo bulbs have finished the plants are removed to cooler quarters exposed to full sunshine; in this house the temperature is kept at 58 degrees to 60 degrees at night and 70 degrees to 75 degrees in daytime with sun, 65 degrees without sun. Here the plants remain until the flower buds are about half developed when they are again removed into their growing quarters. For want of room some plants were left in the warm house all the year round, but they did not flower nearly as well as those removed to cooler quarters. In such warm temperature the plants will have to be watered too often to keep the bulbs from shrivelling, and consequently they will not ripen up so well.

Dendrobium Wardianum is treated similarly, except that it receives more water and is rested in a cooler house where the temperature is kept at 45 degrees to 50 degrees at night. While the flower buds are developing the plants are removed to the same house where *D. superbum* and most other dendrobiums are resting. When all the flowers are out, the plants are again removed to the cool house where they remain until about the middle of March; at that time they are placed in the warmest house to complete their new growths.

I find it most essential for all dendrobiums to use

DENDROBIUM SUPERBUM.
Uppermost spray, Col. Dear's variety.

as small pots or pans and as little potting material as possible; this latter consists of osmunda fibre with a little fresh sphagnum moss.

Another dendrobium which does well under the same treatment as given to *D. superbum* is *D. Bensonianum*.

M. J. Ope

DENDROBIUM WARDIANUM.
(In 4 inch pot.)

Spring Flowering Dendrobiums

Early-flowering dendrobiums will now be in their full spring glory, and where a good collection is cultivated, no richer floral feast could be desired. The fact that such brilliant blooms appear on dry and sometimes withered stems, quickens interest and enhances their many charms. When fully expanded, however, their freely produced flowers, in most cases obscure the barren look of the plants, and judiciously arranged amid greenhouse plants and ferns, or suspended, a choice display may be had from March to May.

A few general remarks are offered on a dozen varieties which may be described as fairly representative types of this beautiful section. The magnificent *D. Wardianum* easily stands first as a popular favorite; the introduction in quantity of the *Lowii* and *giganteum* types from Burmah at a cheap rate has given it a prominent place among democratic flowers, and when an orchid is in demand there is no better "button hole" flower.

Imported plants are preferable to begin with; being full of native vigor, they come away strongly. Then, too, there is always the possibility of a pure white form turning up and white forms with only a dash of yellow in the throat are not uncommon. It has frequently been charged against Wardianum, that it rapidly deteriorates after three years, but if a somewhat cooler treatment than is usually given be adopted, coupled with severing the back bulbs, leaving only from three to four for each lead, a new lease of life will be given provided other conditions are favorable. Wardianum delights in a light position and after growth and roots are fairly started will take copious supplies of water; a severe drying out when growing will certainly result in deformed or smaller blooms. A weekly dip in weak cow-manure when the bulbs are filling out will be beneficial; after growth is fully ripened water should be gradually withheld and plants removed to cooler winter-resting quarters, restarting them again in intermediate house when flower buds appear. Growth will often start too early even in a cool dry place, but water should not be given on this account.

D. nobile is well known as an old and floriferous kind, but there are now many superior varieties of the type *Sanderiana*, *nobilis*, *Cooksonii*, etc., besides the numerous hybrids which claim it as one of the parents; they all require a slightly cooler treatment than Wardianum, but not being of such a deciduous character should not be so severely dried off as that variety.

D. Devonianum is of long, thin, reed-like growth, the small finely fringed flowers being closely set on quite 2 ft. of stem; it is one of the most effective for exhibition purposes; the great secret of successful culture is a light position in East Indian house with copious supplies of water during growth, syringing frequently to keep down red-spider to which it is specially liable. *D. Brymerianum* is unique, with deep yellow flowers of exquisite form with a remarkable beard-like lip; it is not very free but often flowers appear on old growths. It enjoys stove heat the year round, with very little compost, and a careful watering as it does not make roots freely. *D. crassinode* may be described as a dwarf Wardianum and rivals that lovely variety in flower but the flowers are smaller.

D. Falconerii is distinct and of grassy growth which forms a thick mass of knotty pseudo-bulbs and is one of the few dendrobiums that may be successfully grown on blocks or tree ferns; the hottest place in the East Indian house suits it well, with frequent syringing of the aerial growth. It is not an easy subject but is very beautiful, much like Wardianum with a richer color in the throat.

D. thysiflorum requires intermediate temperature; its large grape-like clusters of cream and yellow flowers are freely produced on old and new growths; the bulbs being long and bulky it is more adapted for pot culture than baskets. *D. aureum* (syn. *heterocarpum*) is distinguished for the sweet fragrance of its golden yellow flowers and though an old introduction is not common: of slight growth it is adapted for small pans.

D. Ainsworthii was one of the first garden hybrids from *nobile* x *aureum* and may be described as an improved *nobile* with the fragrance of *aureum*. It is wonderfully free and should be treated like *nobile*. *D. Pierardii* is a very old species, flowers of a creamy white. The growth has a downward tendency and it should be grown in baskets. *D. Jamesianum* is one of the very few dendrobiums suitable for cool-house treatment and when well grown its white and yellow flowers are freely produced from the apex of growths.

As a general rule the smallest possible receptacles

should be used; using as compost chopped peat and moss with a little leaf mould and sand; for pans only a few crocks are needful, giving depth in order to firmly fix the plants. The base of the bulbs should only be tried for security, allowing the bulbs to droop naturally. When flowering, a nice dry, cool, and shaded house should be set apart, where their beauties may be comfortably enjoyed for a more extended period.

Edgar Elvine

British Horticulture

BULB CULTURE IN IRELAND

An interesting collection of narcissi and daffodils was staged at the Royal Horticultural Society's show on April 3rd from the bulb farm belonging to Sir Joselyn Gove. The farm is situated close to the seashore on the borders of Sligo bay. Here within the last six years a prosperous undertaking has been built up. Acres of bulbs are cultivated, the fields lately being a magnificent sight. The owner claims to have one of the finest collections of daffodils in the world. He has secured the entire stock of several new varieties including *Acme*, which was brought out by the Rev. G. Engleheart. In addition to supplying the bulbs large quantities of cut bloom are despatched to market. A large number of seedlings are being raised and several of these are likely to prove a valuable addition to the existing varieties.

AN ENGLISH CARNATION RAISER

Increased attention is now being given by English growers to raising new varieties of the winter-flowering carnations. Amongst the number is A. Smith, a market florist, whose establishment I visited a short time ago. Mr. Smith secured in the same week a certificate from the Royal Horticultural and the Royal Botanic Societies for a new scarlet tree carnation, *Britannia*. Mr. Smith will not be sending out any of the stock until January, 1907. Another of Mr. Smith's introductions is *Progress*, a cerise tinted flower, which will be sent out with *Britannia*. Others are *Coronation*, which has smallish blooms of a pink tint and *The Dragon*, a variegated carnation in a buff ground.

THE FUTURE OUTLOOK

In going through the houses I saw a useful batch of *Lawson* and *Enchantress*, two of the most popular market varieties now cultivated. Discussing the question of carnation raising with Mr. Smith I found that he was full of hope as to the future success of this branch in England. "I do not see why we cannot raise as good varieties in England as in America," he contended. "The American varieties are grown under different conditions and very often do not succeed when transferred to new surroundings on this side. The American growers have the advantage over us in obtaining a longer share of sunshine in the winter-time. The tree carnations are greatly increasing in popularity." As to the new Winter Flowering Carnation Society, Mr. Smith considered that it was very necessary. "There should be a body of experts," he stated, "to grant certificates to the new introductions, which should be registered. This would prevent a number of worthless varieties being placed on the market. The trade would also have some confidence in sending their new varieties before a committee of specialists." As regards the recently formed society, I learn from Mr. Hayward Mathias, the Honorable Secretary, that a meeting is to

be held during the Temple Show next month when matters pertaining to an annual exhibition, the election of officers, etc., will be discussed. At a recent meeting the Provincial Committee decided that the minimum subscription should be 5 shillings per annum.

A SAFETY CYANIDING MACHINE

A Leeds nurseryman has invented a safety cyaniding machine which is depicted in the accompanying sketches. The use of hydrocyanic acid gas as a fumigant against the dreaded insect pests is generally recognized as a valuable agency in cleansing the greenhouses, at the same time effecting a considerable saving in the cost of fumigating. Many nurserymen are prevented from using the remedy owing to the danger entailed. By the system adopted the risks are entirely obviated, owing to the operator being able to lower the cyanide into the sulphuric acid from the outside of the plant house. The gas is most deadly to all insects, and will

effectually eradicate mealy bug and red spider. The machine is suspended to the roof of the house by a hook attached to side bars. The bowl is attached at the bottom of a frame work, above which is a scoop. The requisite quantity of water and acid is placed in the bowl. The scoop in which the cyanide salt is placed above the bowl is held in position by means of a lever, to which a string is attached, leading to the outside of the house. The cyanide salt having been placed in the scoop, the operator leaves the house and locks the door. From outside the structure he pulls the string which releases the lever. The cyanide then falls into the acid, and the gas is immediately evolved.

W. H. Adsett.

London, April 11, 1906.

Ornamental Vines

The common grape vine may be said to be a truly ornamental plant and as such may be used in situations where a quick effect is required to hide old trees, walls, and ruins, also by artificial training in the garden the double glory in the fall of foliage and fruit make it useful for purely decorative reasons; but ornamental vines proper are those whose primary quality is beauty of growth and foliage rather than fruit, though with some of these, both may be secured in very favorable situations, with artistic effect. On the continent of America where the veranda style of architecture is favored, there is perhaps a specially wide field for all types of really good climbers, and for the decoration of pergolas, arches, pillars and trellis work, few plants are so admirably adapted as the vine. Among recent introductions there are two varieties especially that stand out with promise of great usefulness, namely, *Vitis Coignetæ* and *V. purpurea atro-sanguinea*; in England and sheltered positions in Scotland they have been proved perfectly hardy and they suggest themselves as being equally fit for the more favored sections of the United States and Canada; both are of free growth and exceedingly rich in the fall with gorgeous coloring. *V. Coignetæ* is vigorous and admirably adapted for covering large lattice trellises. The leaves are of a deep green with purple veins showing up well on this ground, ultimately the whole leaf turning to a deep scarlet color; they are not too thickly produced but are as large as *Aristolochia Siphon* and the plant will serve as a companion or as a nice change to that useful but ubiquitous old climber. *V. purpurea atro-sanguinea* is of smaller growth the leaves being also more compactly set upon the stalk, and like *V. inconstans* (syn. *Ampelopsis Veitchii*) is more adapted for covering walls than *Coignetæ* but it may be used as a climber in all situations. The leaves are a rich scarlet and color earlier and more freely than *Coignetæ*. These two are certainly the best out of about a dozen of purely ornamental vines, but there is one other which deserves more attention—the pretty *Vitis heterophylla* of greenhouses, but more properly known as *V. quinquefolia variegata* of gardens; not perfectly hardy it still flourishes well in sunny sheltered positions and for dainty light pillars or rock work is a very neat plant; its purple stalks and petioles, creamy white mottled foliage and charming blue berries make it very useful when cut for table and floral decoration. With regard to propagation, nice fall growth may be cut up into pieces and rooted on a warm bottom, then gradually drying these off in the winter, restarting in the spring, but a much surer method is to take well-ripened wood about February or March, cut up into single eyes as with fruiting vines and grow straight on inside, ripening well and just protecting from frost the first winter, planting out the following spring in a sunny position with good drainage, mixing ordinary garden soil with turfy loam, rough bones and sand.

EDGAR ELVIN.

Lachenalias

The genus *Lachenalia* belongs to the lily family, and has about forty species all natives of South Africa. All the species are not showy and therefore many of them are not common in cultivation.

Most of the private gardeners know the common species of lachenalias, but after all they are not grown very much and this is rather surprising as they have lasting qualities while in flower that few plants possess. To last three months in good condition is no uncommon thing if they are watered properly. Mechanical watering or yet the hose would make quick work of them.

In this country the bulbs are very expensive and I never could understand why this is so as there are few bulbous plants that increase so quickly as lachenalias do.

Some day some shrewd florist will take hold of this plant and push it as a novelty. In a window where the sun shines most of the day there isn't a more lovely plant than this is. And when it will be recalled that the very best *Lachenalia* we have and which is also a hybrid was raised by a minister, Rev. John Nelson, in his window, there need be no surprise that I should recommend it as a valuable window plant.

The cultivation of lachenalias is very simple and they can be grown by any person. If the plants are wanted for Christmas holidays the first batch of bulbs should be potted in July.

For a succession keep on planting in August and September.

We grow them in shallow pans which are eight inches in diameter using plenty of drainage which keeps the soil sweet and in good condition.

The compost consists of good loam, sheep manure, leaf mold and rough sand.

After the plants have flowered and the leaves begin to get yellow, take the plants on a shelf where they can get plenty of light and dry up the foliage and bulbs. The bulbs are then to be potted in the pans during the summer and are to be watered, thus imitating nature as far as possible. When potted time comes the whole bulb is to be put in the soil where they have been resting and to be watered according to size. All

the large bulbs are selected and potted up into pans. In this way they give more uniform trusses of flowers than if the large and small were grown together. The small bulbs are grown in boxes and they make good flowering bulbs by the following year. Just after they are potted one good watering may be given with the good old-fashioned watering pot which will settle the soil. They will require very little water after this until growth begins. Place them in a cold frame where they can get plenty of light and air. They can stay in the frame until frost sets in then they can be removed to the coolest house and placed in a position where abundant light can be procured. The light makes the plants more stocky and the flower spikes are stronger

and require no staking. The leaves are very easily disfigured if cold draughts strike them.

A small pinch of Clay's fertilizer makes a great improvement on the plants if given just as the flower spikes begin to show.

One of the best and most uniform growers is *Lachenalia Nelsonia*, which is shown in the photograph. It has golden yellow flowers which are produced in racemes eight or nine inches high.

L. tricolor is one of the commonest species and the flowers are made up of three colors, bright green, red and yellow.

L. pendula is a strong growing kind. It has larger bulbs and leaves and longer flower stems than the above kinds. The flowers are deep purple, red and yellow.

LACHENALIA.

Robert Cameron

Acacias

The genus *Acacia* has a species membership running up in the hundreds, most of them producing yellow inflorescence, and largely from Australia, yet, notwithstanding their effectiveness, they are less

well-known numerically than they were years ago. This class of plants require an abundance of water at all times, especially in the growing season; frequent syringings are very beneficial to their well being. Stimulating waters are also of great assistance; as they are gross rooters any good standard potting soil will suit them. Low temperatures are more in keeping with their requirements in winter than higher ones, 40 to 45 deg. Fahr. being quite high enough.

Should they ever get sickly and dyspeptic as indicated by pale foliage and other signs, planting out in mother earth is the best recuperative method to adopt; in fact this method is to be recommended whether sickly or not, as greater progress in size is made thus in a given time. It is not to be taken for granted, however, that the method is a good one irrespective of condition, for it is necessary ere the plants are turned out, that the root system should embrace the soil so thoroughly as to prevent its dissolution at lifting time in the fall.

Those enumerated below are comparatively easily rooted with no greater special care than bestowed on the general run of cuttings, excepting *A. pubescens* which, while not absolutely impossible to root from wood-cuttings is pretty nigh so. It is said that propagation from root cuttings of this species is within easy accomplishment although I have not tested this method myself.

Acacia armata leads the list as the best well-known kind before the public at the present time. *A. a. hybrida* much resembles the former but is a more rapid grower and less stiff in habit; the internodes from leaf to leaf are considerably further apart, the leaves themselves being longer and less broad. This variety makes a fine specimen bush plant in much less time than the former does.

A. Baileyana is a comparatively new-comer from Australia and is one of the earliest to flower, being in flower somewhere around Christmas; it is graceful and airy in habit of growth, producing long, slender, willowy twigs clothed at the proper time with fluffy globose yellow flower-heads.

A. Drummondii is, in my opinion, the peer of all the acacias as a bushplant. It looks its best trained in pyramid form, and when well done is a gem of the first water for any purpose. It is especially telling for table and other small decorations when but one and a half to two feet tall, and equally effective and grand in specimens four times the latter size with proportionate width. Clad in its clear canary yellow catkin-like inflorescence the most refined table cannot help being charmed.

A. heterophylla is an exceedingly graceful kind when once formed. It roots readily, and attains small decorative plants in two to three years under attentive care. It appears the prettiest when trained to a bush plant on a few feet of clean stem, over-topped with the azalea semiglobular type of head. It should be cut back severely annually after flowering in order to enable it to push forward a sheaf of its willowy growth for the ensuing year's flowerings.

A. pubescens is so well known that detailed description would seem superfluous, yet how few commercial or, for that matter, private establishments possess it. It is less well-adapted to small decorative plants than others as its habit of growth is sprawling and drooping. To illustrate to best advantage the pre-eminent elegance of this kind, the high standard open-umbrella shape method of culture is unquestionably the one to bring this about; the higher the standard the grander it will appear. Six feet of a clean stem is a good height, but seven feet is better. A well formed, massive head over-

topping any of those stems, when in flower, is indescribably beautiful.

A. cultriformis is another very fine species, and easily handled; flowers deep yellow in crowded terminal racemes; stiff and somewhat formal in manner of growth but withal pliable for any desired shape.

H. Furber

Culture of the Cyclamen

II.

The young seedlings should be getting crowded in the boxes by this time, so the first potting ought to be attended to or the plants will become drawn. For the first potting we use 3 1-2 and 4 inch pots, as smaller sizes are liable to get dry in spite of the most careful attention, and besides the young plants ought to lift with a ball large enough to comfortably fill a 4 inch pot. The soil should be one-half turfy loam, one-fourth well decayed manure, the remaining fourth to be composed of leaf mould, sand and firm charcoal, this compost having feeding elements and still being very porous.

A very important point is the manner of potting. Plants that are potted loosely grow larger, but will have that straggly appearance so often seen, one leaf stalk longer than the other, and the flowers, unless they get artificial support, will, with the first handling, very likely hang over the edge of the pot. Artificial supporting of cyclamen we detest to see. On the other hand, too firm potting retards the growth, so we should aim at a moderate degree of firmness and the plants will be compact and the flowers stand on their own legs. Growers might experiment a little on this, it being very interesting to note the different finish the plants will have with the different methods of potting.

Old plants that are past flowering and intended to be grown on for another year should be cleaned of all decayed leaves, old flowers and seed pods, and given a shift into larger pots, using the same compost as before mentioned. They probably will not make much growth for a month or two, but they will be making roots and will be more likely to start when the season arrives.

Any plants that are badly infested with that troublesome little mite so prevalent among cyclamens, ought to be discarded, as no cure has been found for it so far. Fumigating and spraying is of no avail unless done so strong as to injure the plants; dipping in a strong solution of fir tree oil will keep them in check, but dipping is a laborious undertaking to those who have any number of plants. The old maxim has "prevention better than cure," so we would advise fumigating the house with hydrocyanic gas before putting the young plants in, then keep a good layer of tobacco stems among them to be renewed at intervals, and we feel sure that insects of any kind will give no trouble whatever.

Attractions of the fern garden

The excellent articles on ferns for every day use, from the pen of A. Hans, which we have published at intervals during the past year have, in some degree, failed of their purpose if they have not awakened a greater interest in the subject of hardy ferns. With the hundreds of crested, plumed and laciniated varieties of the hardy English and American species which fern enthusiasts have collected and distributed, the fern rock garden may be a spot of great beauty and absorbing interest. It can be located where nothing else would thrive as well, and, once established, is not likely to be abandoned. Now is the time to start, before the young fronds commence to unfold. Growers having good collections to offer should advertise them at once.

San Francisco's distress

Although we are still without definite news as to the fate of our brother horticulturists of San Francisco, there is no reason to believe that they have escaped unhurt the awful tragedy which has horrified the whole world and touched the universal human heart as it has never been touched before. In the cruel completeness of the disaster and the all-pervading distress, it is perhaps well for the present that whatever humanity prompts us to offer for the relief of the suffering be done without discrimination, but later on when facts in detail have been learned some action should be taken by the horticultural interests of the country, through the Society of American Florists or other national organizations to extend a direct, practical, full-handed relief to our stricken brethren of the Pacific coast, whose homes have been overthrown, possessions laid waste and business ruined.

Building up the club

The phenomenal growth in numbers and activity of the Gardeners' and Florists' Club of Boston, of which the social gathering recorded in this issue is one of the outward signs, shows what may be accomplished under

the right incentive and well-directed effort. Boston is sometimes criticized for her alleged apathy by those who the right kind and usually "gets there" when occasion presents. The Boston club is fortunate in the quality of its officers. To President Wheeler, Secretary Craig, and also to Mr. Wheeler's predecessor, Mr. Pettigrew, belongs the credit, especially, for the progress recorded during their incumbency. What has been accomplished by them is possible in any other similar organization. We do not hesitate to assert that it is within the power of any club president—if he possesses the influence and good will which an election to this honorable position would indicate—to bring to his meetings the people and the enthusiasm necessary to duplicate in quality and effect the prosperity attained by the Boston organization. There are presidents and presidents. It is not by noisy demonstration or shrewd ax-grinding, neither is it by mere dignified posing, with gavel in hand, once a month on the platform, but by persistent, earnest personal work done at a serious sacrifice of time and self-interest that proud results are brought about. That's the kind of executive ability that counts.

Gardens for the multitude

While the amount of money expended by affluent families on vast residential estates is very large, and while these operations call for an enormous quantity of choice material, enlist the services of high-priced designers, and furnish work for many employes, yet there can be no question that the great source of prosperity for the plant grower and nurseryman lies in the multitude of people of moderate income and moderate expenditure. Stimulated by the object lessons in public parks, cemeteries and private estates this great class, in every section of the country, are in the frame of mind to follow suit, to buy and plan and plant and thus make for themselves homes surrounded with gardens and verdure. The great need today is for men expert in garden craft to make plans and give correct advice as to planting, at a moderate charge. The big landscape firms have no time or disposition to take up this class of work; the men willing to undertake it have been too often incompetent. It is to the advantage of every professional gardener to do all he can to popularize rural life by making it appear in a reasonable and attractive light. Some seclusion and restful surroundings, with just enough pleasant occupation to keep away monotony; these advantages of country living without enough of its burdens to drive the owner back to a city existence may be conserved by the intelligent landscape gardener who can frugally yet effectively lay out a small place with such materials and such method of planting that it shall require thereafter a minimum amount of work to keep it in order. The ordinary amateur with his crude ambitions is liable, if left to himself, to lay the foundation for expenses that will in a short time wean him of all gardening desires and permanently stifle his natural fondness for horticultural pursuits.

"AN EXHIBITOR'S GRIEVANCE" FROM THE JUDGE'S POINT OF VIEW.

Editor of HORTICULTURE:

Dear Sir:—I notice in the issue of HORTICULTURE, April 14, 1906, an article signed by John McFarland, commenting on awards made him at the recent March exhibition. Ordinarily such articles are allowed to pass without remark by those who know how utterly unjust and misleading they are; but as you, Mr. Editor, have seen fit to give the article prominence by making editorial remarks upon it I think the awarding judges should be heard from also. I am speaking for the Horticultural Society's judges only, as the Rose Society's awards were made by special judges in no way connected with the regular standing committee of the Massachusetts Horticultural Society.

In the article referred to Mr. McFarland complains because he did not receive first prize for his vase of Brunner roses and seems to think an injustice was done him. I can assure him that no injustice was intended and in fact he received all that was due him, for the award was in conformity with both the rules and the quality of the flowers shown. They were good Brunners but not first prize flowers, as he himself well knows and I will venture to say, knowing the quality of flowers he can produce, that probably, he would resent any imputation that these were the best he could grow.

I think Mr. McFarland's statement that he entered in both the Massachusetts Horticultural Society's class and the Rose Society's class and received second prize in both, rather substantiates any claim that no injustice was done him for the two committees worked independently and neither knew nor cared what awards the other might make. Any offer he may have had for the flowers is of no moment in this connection as the society does not pretend to buy the flowers but simply offers prizes for the exhibition of them and when a man enters in competition for these prizes he should make up his mind to take an adverse decision as cheerfully as he would a first prize, for the judges would as willingly give him first honors as any one else providing his exhibit is worthy. I heartily commend your remarks in regard to this matter and wish every exhibitor could be made to see the wisdom of them. In regard to the vase of lily of the valley exhibited by him I will say that it was a beautiful vase of flowers, but it was only one among a great many miscellaneous exhibits and it should be borne in mind that money awards for exhibits of this nature must necessarily be regulated by the relative importance of any exhibit under consideration as compared with the whole exhibition. It was one of the cases where it was difficult to decide upon a proper recognition. A larger amount of money would have been entirely out of proportion with the amounts awarded other similar exhibits. A vote of thanks would not have been appreciated and a cultural award was not available for there was nothing to lead us to think that the roots from which the flowers were forced were of his own production or even Ameri-

can grown. If we had been assured of these facts a cultural certificate or honorable mention would have been in order but although the flowers were of high quality there seemed to be no more cultural excellence displayed in the forcing of them than pertains to the regular practice of any careful grower.

When flowers or plants are put on exhibition it is expected that they will be of the best quality possible. If any extraordinary skill is displayed we are only too willing to recognize it by a suitable cultural award. It would be unreasonable to expect us to give every exhibitor an award of superior cultivation, for such a course would soon deprive such certificates of their value.

It seems to be one of the unfortunate things about competing for prizes and exhibiting that so many, when defeated or awarded a gratuity not in accordance with their own views, are so ready to turn upon the judges and accuse them of dishonesty, incompetency, favoritism and many other short comings without looking into the matter and finding out the truth.

It has been my fortune, or misfortune—as one may look at the matter—to be closely associated with a great deal of judging and many judges and I can truthfully say that I do not now recall a single instance where the decisions have not been given conscientiously and honestly notwithstanding all the ill-natured talk so often heard to the contrary, and the conviction is forced upon me that any exhibitor who indulges in such a diversion is doing himself the greatest injury and is in no way advancing horticulture. He belittles himself and becomes an object of ridicule and suspicion.

"MAKES THE WHOLE WORLD KIN."

Editor of HORTICULTURE.

Dear Sir:—Messrs Watkins & Simpson, (Seedsmen) 12 Tavistock Street, Covent Garden, London, cabled us on April 21st:—

August Rolker & Sons, New York.
Wish to express our deepest sympathy in appalling catastrophe to your countrymen.
WATKINS & SIMPSON.

We have acknowledged this spontaneous expression of sympathy on behalf of their many American friends, with a few grateful words of thanks. And we take this means of bringing it to their notice, since your paper is most generally read.

Yours very truly,
AUGUST ROLKER & SONS.
31 Barclay St., New York.

PERSONAL.

Alex. J. Guttman, the New York wholesale florist, sailed on the Bluecher, April 19, for Plymouth, and will return by next steamer, hoping the sea voyage will restore his health which has been poor for some time.

Mr. George Baldwin, formerly with Siebrecht & Son, New Rochelle, N. Y., will hereafter be located at Secaucus, N. J., where as a member of the firm of Carrellis & Baldwin, he will devote his attention to orchid raising.

WHOLESOME CHESTNUTS.

Plant hollyhocks out doors, and dormant canna roots in beds and borders. Remove hybrid tea roses from frames or wherever they have been stored into their growing quarters. Have some kind of shelter or shade handy to protect uncovered hydrangeas in cases of emergency.

If any thing out doors or in frames gets nipped by frost, the first thing in the morning sprinkle with cold water the subject bitten, afterwards keep it shaded for at least a day, or until recovered.

Chrysanthemums are regaining their lost ground. To help them along get a few of the gems of recent introduction as advertised in HORTICULTURE.

Don't lose heart in the attempt to grow Lorraine begonias, some men after repeated failures simply fall into the way of growing them. In view of this it may also cheer you along to be told that all over the country Lorraine begonias are gaining in favor.

Cover old stumps of trees, ugly fences, and rough stone walls, with roses or some of the many climbing plants available, but why rack your head thinking what to plant when from Mr. Walsh of Woods Hole you can obtain for a modest sum a collection of roses, that in a very short time will make the most forbidding objects irresistible magnets of attraction, and that will increase in beauty with the progress of time.

Now the time is fast approaching when most men will wish they could do a dozen or more things at once but it is always better to drop all but one until that one is through with for the time; then go on to the next most needing attention.

If it is desirable to have very large berries in bunches of grapes the berries should be well thinned at first, and the vines only moderately cropped. Heavy cropping is responsible for numerous and various disagreeable developments in grape cultivation. If for any reason two shoots are left to grow from one spur leave a bunch on one shoot only, two shoots are sometimes left for the sake of appearance, the extra one to occupy the place of one that failed. Stop the shoots at two or three eyes from the bunches, and the lateral shoots at the end of every eye right along.

To prevent mildew dampen the pipes, then scatter sulphur over them. While an unsatisfactory state of the border and the roots may to a great extent be responsible for air roots, still if from the start fresh air is admitted whenever possible it will be found that the number of air roots will be less. A continued close damp atmosphere induces roots to come out to feed on the matter floating around. It has occurred to many that these roots rapidly wither when the moisture in the air has diminished when the grapes are well on towards the coloring stage, and it has also occurred to many that it was then that the harm was done, on account of the check suddenly given by the destruction of the vitality of these roots.

NEWS OF THE CLUBS AND SOCIETIES.

RHODE ISLAND HORTICULTURAL SOCIETY.

The regular monthly meeting of the Rhode Island Horticultural Society was held April 18th in Fallstaff Hall, 283 Westminster street. E. A. Stene of the Agricultural College at Kingston was the speaker of the evening, taking for his subject "Spraying Fruit and Other Trees."

At the business session President M. M. Burdick presided. The committee which was recently appointed to look after the securing of a new hall reported that the trustees of the Public Library had consented to the using of the lecture room in that building, and the members then voted to accept the offer. Another committee reported favorably on the action of societies of other States with regard to a measure adopted to be presented to Congress asking for legislation relating to the packing, grading and marketing of fruit. The Rhode Island society resolved that it was in hearty accord with this action and would do its share toward securing right legislation.

Mr. Stene was then introduced and spoke interestingly on the matter of spraying fruit and other trees. He said in part: "My department at the college has been termed the missionary department, because wherever I have had occasion to go the cry has been 'Let us (s)pray.' But this matter of spraying is a very important one. To-day there is a demand for better fruit, and the marketmen tell us the demand is greater than it ever has been before. We are confronted with a vast array of diseases among fruit and other trees and there are insects to-day at work on them to their destruction that our forefathers never heard of. This is because in recent years there have been many insects imported. Out of 73 destructive insects it is said that 30 of them are the products of other countries. And in the importation of these destroyers we fail to get the parasite which works against their operations."

"Spraying the trees is the only method I know of that can work successfully toward the destroying of them. This matter needs careful study, and the more one knows about the insect he is to destroy the better it is. Spraying is far more effective than painting the outside of the trees or in using patent remedies said to be beneficial in killing the insects. In spraying there is need of special implements, and a light spray is better than a steady stream from a common nozzle."

The speaker explained to some length the manner of spraying, and following his talk there was an informal discussion.

COLUMBUS FLORISTS' CLUB.

The regular meeting of this club took place Tuesday evening, April 17, at the bowling alleys of the Y. M. C. A. This was arranged in order that the larger part of the evening might be given to bowling. Our club has entered into the matter of forming a bowling club for the summer, with much enthusiasm; and at our practice games the attendance

has been good, and many good bowlers are developing. The committee who have had charge of the packaging and distributing of the penny packets of flower and vegetable seeds to the public school children have about completed their work. Our club's next meeting will be on Tuesday evening, May 1st.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Department of Plant Registration.

The Southern Floral Nursery Co., Fruitdale, Ala., submits for registration the following cannas:—

Mount Washington, white.

Mount Zion, very dwarf; red edged with yellow; a seedling of Mont Blanc. Henry George, a dwarf crimson bedder.

Telegraph, bright red; a little taller than Express.

Inman's Choice, dwarf red, edged and shaded bright golden yellow.

Britta, dwarf pink, with short, rounded leaves.

Golden Cluster, golden yellow in large, compact clusters.

Sensation, deep golden yellow spotted with red.

Uwanta, rich yellow with orange red spots.

Thelma, a seedling of Sec. Chabanne, but a more profuse bloomer and a little taller; color, more of a golden orange.

Pansy Read, red with light line of gold on margin; dwarf.

Crown of Gold, a seedling of Coronet, but a great improvement on that fine variety; a little taller and a deeper yellow.

Admiral Togo, yellow; strong, rapid grower.

Queen of Orange, golden orange.

The American Duchess, dwarf yellow specked with red.

Golden Dawn, golden yellow.

Royal Neighbor, purple bronze foliage, now two years old but never has bloomed.

Golden Express, a seedling of Express much like it but of a golden yellow color.

Amalgamated, a seedling of Express, having the dwarf habit of its parent and of a peculiar blend of red and copery yellow color.

Ohio, a giant bronze foliage with bright red flower; 8 to 9 feet high.

Buckeye, a tall green foliaged sort with a flower of golden yellow, striped and blotched with red in a very peculiar manner.

Dayton, yellow; seedling of Sam Trelease.

Nymphaea, light pink edged with cream; foliage dark green; a seedling of Hiawatha.

Leader, seedling of Mont Blanc; very dark rose pink of a shade new in cannas.

Royal Bronze, foliage purple bronze with long, upright leaves; dark crimson flowers.

Fairhope, an improvement upon the popular Chas. Henderson; a little taller than Henderson and a shade darker in color.

W. J. STEWART, Secretary.

MORRIS CO. (N. J.) GARDENERS' AND FLORISTS' SOCIETY.

Our April meeting was well attended, Morristown came down with a full delegation. Wm. Duckham's theme "A Journey Abroad" was the drawing card. He gave a very interesting story of his trip of four months. His account of the Edinburgh show was interesting from more than one point of view. The city itself, through which he was piloted by the veteran grower, Peter Barr, he declared to be the finest he was ever in. In this town of something like 280,000 population, the paid admissions to the show were over 75,000. In chrysanthemums, he said, varieties which do but indifferently here under the best culture, were the best flowers he ever saw, and again varieties which are our pride were only medium or not seen at all. The conclusion he draws is that climatic conditions as well as culture play a large part in influencing the chrysanthemum. He had visited largely in Scotland and England many private places of note as well as the Kew Gardens and the great commercial places and many interesting and instructive notes were given of them. Some new things are added by this trip to his already noted collection. A hearty vote of thanks was given the speaker.

We had but one plant exhibit this month. It was a magnificent group of Spiræa Gladstone put up by Otto Koch, florist of the N. J. State Hospital, Morris Plains, N. J. The judges awarded a certificate of merit, declaring it to be the grandest lot of this they had ever seen. An invitation was extended by Mr. Koch to visit his place and view these and other Easter plants, which courtesy was accepted. Four new members were elected. Our next flower show will be held in Madison, N. J., November 1 and 2 next. The schedule is to be revised in committee for next meeting.

E. REAGAN.

NEWPORT HORTICULTURAL SOCIETY.

The schedule of premiums of the Newport Horticultural Society is about completed, and when issued (which it will soon be) it will be found to be much more attractive to intending exhibitors than the schedules of this society have recently been. More attention has been given to specimen plants and more liberal premiums offered. Groups of plants of various kinds are also more generously provided for. There are more classes than in any schedule hitherto prepared for one exhibition and there is more money available to meet the necessary cost of the increased number of classes. Dahlias are still given the prominent position their popularity continues to demand. Carpet bedding is supposed to be coming in to vogue again and to encourage this class of work or something akin to it, liberal premiums are offered for practical demonstrations of the effects that can be produced with sub-tropical bedding. Gardenias, carnations and American Beauty roses are scheduled to be awarded premiums exceeding in amount those of former years. The schedule

CIVIC IMPROVEMENT THROUGH PRIVATE ENTERPRISE.

The illustrations on this page show some of the good work being done by the National Cash Register Company on its buildings and grounds at Dayton, Ohio. The hard lines of factory buildings are softened and the work-rooms made cheerful by extensive tiers of portico and window boxes filled with drooping vines and bright blooming flowers. Climbing material is used profusely on the walls, fences and other objects that lack beauty in themselves, are clothed in luxuriant green and groups and belts of flowering shrubbery and trees are placed wherever they can be used to advantage to make beautiful and attractive the grounds about this vast group of factory buildings. That the influence

of this ever-present example of what may be done to add comfort and ele-

gance to the home surroundings is not lost on the thousands of employees and

others to whom its silent daily appeal is made is evidenced in the cleanliness and refinement everywhere apparent in this attractive little city. The visitors to Dayton next August are assured of an object lesson as impressive as useful and those who participate in the exhibition of out-door planting material for which preparations are now being made can depend upon having an attendance of appreciative local visitors who should make good customers for this class of material. Our frontispiece shows a bit of planting at Far Hills the beautiful estate of Mr. John H. Patterson, where the festivities connected with the president's reception will take place on the first evening of the convention.

will in a few days be in the hands of the printer, and when that individual is through with his work the secretary will gladly send a copy to whoever intimates a desire to have one.

HORTICULTURAL SOCIETY OF NEW YORK.

The Sixth Annual Exhibition of the Horticultural Society of New York will be held in the New York Botanical Garden on Wednesday and Thursday, May 9th and 10th, opening at one o'clock on Wednesday. The schedule for the coming exhibition is a repeat of that which was in force last year when a very successful exhibition resulted. The schedule is divided in 26 classes, which are in two sections, one open to all and the other excluding all who grow plants or flowers for sale. The classes are duplicated throughout.

The printed schedule will be issued in the course of a few days and copies may be obtained from Leonard Barron, Secretary.

DETROIT FLORIST CLUB.

The Detroit Florists held their regular meeting on the 18th with a fairly good attendance. The Easter business was brought in discussion rather freely, most every one having some experiences to relate on both pleasant and unpleasant incidents during the week.

One member in addressing the club stated that the actual profits on the

Easter business does not pay for the gray hairs it brings. The sale of potted plants was shown to be extra large, most every one selling to the limit. Cut flowers were much less in want, as compared with former years. Carnations and roses moved rather slowly. Violets were good for their time and sold better than expected by every one. Several growers complained that violets are put up too elaborate as regards boxes, ribbons, etc., with the expense falling on them, while the retailers claim this induces a better sale of such by keeping up-to-date. A motion was seconded thanking Mr. Dilger for use of the Michigan Cut Flower Exchange, in which the club held the recent flower show.

A unanimous vote was passed congratulating the Mayor of Detroit and the city on the appointment of Philip Breitmeyer as Park Commissioner.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The annual banquet of this organization, at Horticultural Hall on the evening of April 25, was a memorable event for all who participated and there were three hundred of them, members with their wives and daughters. The banquet was spread in the great hall, and with the profuse decorations of plants and flowers a beautiful and inspiring spectacle. Flowers had been donated with unstinted generosity, and the tables were

fairly covered with them—in vases and spread over the cloth. President Wheeler held a reception in the lecture hall while the orchestra played, preceding the banquet, which began at 7 p. m.

There was no speaking, but a fine entertainment followed the banquet, the Warren Mandolin Club, Brookline Male Quartette and several talented soloists contributing music and recitations. After that dancing began in the lecture hall, and the younger members—also some of the older ones—tripped merrily until 11.30.

Fred E. Palmer was chairman of the reception committee of seven, David Lumsden, Duncan Finlayson and Wm. Sim were the decoration committee, and Peter Miller acted as floor director, with five very distinguished appearing aids. No committee ever did their duty more enthusiastically. President Wheeler was here, there and everywhere. All in anyway connected with the management of the affair are to be congratulated on the splendid success achieved.

The Kentucky Society of Florists will hold its regular monthly meeting the day night, May 1st.

The exhibitor of the superb anthuriums, shown at the last meeting of the Gardeners' and Florists' Club of Boston, was Thomas Waldie, of Beverly, Mass.

MECHANICAL WATERING EXPLAINED.

In answer to Robert McGorum's questions, etc. in HORTICULTURE page 494, April 14th, will say, that I do not wish to be quoted as advising the use of mechanical watering in a private place where miscellaneous plants are on display; possibly blooming and foliage plants in one grand conglomeration; except, possibly, as an auxiliary to the hose or can. I also understand that mechanical watering is in opposition to much that we have accepted as necessary to successfully grow plants under glass, and I wish to have it understood that we must modify conditions to a certain extent so that it can be successfully applied. The most advanced places, at the present time, do not grow a mixture of all different kinds of plants in one house, but give whole houses or sections of houses, to the growing of one kind of stock. These are the places where a watering system is practical, as an even amount of water given the full length of the house will be evenly absorbed by the plants; providing, of course, that the ventilation and heating pipes are the same throughout.

Let it be understood that where heating pipes are in closer proximity to one part of the bench than to the other, thereby producing dry spots, these conditions should be remedied, also the ventilation should be studied, that the effect of the air will be the same throughout the full length of the house. Conditions being equal, the necessity for water also becomes equal, and the result is simply this: that a whole bench of plants can be watered or syringed, just as quickly as one plant can be cared for with the hose or can. I am aware that some plants will be injured by spraying from overhead, and for this kind of stock we must place our system underneath the plants, so that we can water them from underneath. Geraniums, for instance, where the flowers will be injured after they begin to bloom, can be watered from underneath, by having lines of system placed just above the pots, close enough together so that the water is evenly distributed. With reference to watering shelves, will say, that if Mr. McGorum has one the full length of his house, he would find a sheet of spray the full length of house just above his shelf would be very convenient. By running line over rows of Boston fern baskets the full length of house, by simply pulling a lever a sheet of water is produced the full length of house and the entire row watered just as quickly as one plant can be watered with the hose, and with only one-half as much effort. I now have houses where I water ten rows of Boston ferns side by side hanging from rafters of houses with one line of system just over the center of these rows of Boston ferns.

About seedlings in cold frames will say; that a line of system just in the center of frame underneath the sash will water the frame instantly, and without the necessity of lifting up the sash the spray can be directed to any part of frame desired, that is, one side or the other, always, of course, the full length of system

With reference to growing pot lilies or pot roses for Easter trade, will say, that these can be watered from overhead or from underneath, just as the operator may desire, by having the system placed both overhead and underneath the foliage. It is, of course, understood that all plants will receive the same amount of water, and that the grower must use just as much judgment in using a system of this kind as in any other mode of watering. The drainage must be watched and kept open, or the pots and plants potted as near alike as possible, and everything done to equalize the conditions as much as possible.

Mr. McGorum's offer to put up a line of system in one of his houses is certainly very kind of him, and I hope to be able to take advantage of his offer. I am thoroughly in accord with Mr. McGorum's advice to keep cool and talk over our ideas in a friendly way and therefore refrain from answering anything that does not pertain to question in view.

Although I have very little time to put into this mechanical watering business, as my duties to the Geo. Wittbold Co. take up my entire time, I will be glad to answer any questions the readers of HORTICULTURE may ask, and will advise and give my honest opinion where mechanical watering would be adaptable, if given the facts in the case.

Let us not ridicule or criticise, but ask your questions for a purpose, and I will be glad to answer same.

Thanking the Editor, and readers of HORTICULTURE, I am,

Yours very truly,

LOUIS WITTBOLD.

MORE ABOUT MECHANICAL WATERING.

"A child's among ye takin' notes
An' fatch he'll plant 'em."

In looking over last week's HORTICULTURE I see the latest convert to the mechanical watering idea is Mr. McHutchison. It's wonderful what old Time does accomplish. We all know Mr. McHutchison to be a globe trotter, and a genial gentleman, but his ideas have taken a sudden change. "I wonder why." Some time ago while on a visit here, I suggested it would be a good thing if there were more hose used on the other side, having worked at only one place where a hose was in use. He jumped on me, and said he was glad they didn't, for in using the can it gave employment to an extra number of men. Now he jumps on the English gardener, and calls him old-fashioned, the very person he upheld not long ago. "We are," he says, "to see it in our midst." I wonder if he has converted his father-in-law, Mr. Edgar. If it is so and the latter gentleman takes the conversion seriously, and sells every hose and can he has on the place to the junkman, after having installed the mechanical man, growing as good product as formerly, I will say the mechanical man is a wonder; the rush for the apparatus will be great. Numbers of men will be looking for different employment, and the payrolls of the poor florist will be perceptibly decreased. Get it in quick, Mac, I will go over and take a peek at it.

Your other correspondent writes a very nice letter, having used it a few months, growing vegetables, but wouldn't monkey with a house of Farleyense or Lorraine. What we would like is a true statement from a carnation grower, a private gardener and a rose grower—men who have a reputation of growing good products—that they have used the machine for one year and find it better, or just as good as the can or hose, growing as good stock and keeping the plants in as healthy condition; then, and not till then, we will be getting information. This will be the best test that can be made, as some persons are so much carried away with something new that they forget themselves and give statements that sometimes cannot be backed up with cold facts. I think that the hose and the can manufacturers will remain in the business for some time yet until they or we get facts that will make them stop their production.

R. T. MCGORUM.

A SCHOOL GARDEN INSTITUTE.

The Massachusetts Agricultural College held a "school garden institute" at Horticultural Hall, Boston, April 21, when the various aspects were discussed.

F. A. Waugh, professor of horticulture and landscape gardening in the Massachusetts Agricultural College, presided.

Henry S. Adams spoke on "How Successful School Gardens Are Managed." He said that one reason for the difficulty in establishing them is that many suburban towns do not see any necessity for such work.

Mr. Waugh spoke on the "Selection of Sites and Preparation of Soils," and M. A. Blake, instructor in horticulture at the Massachusetts Agricultural College, gave a practical talk on the "Cultivation and Care of Soil, and the Care and Use of Tools."

Herbert D. Hemenway, director of school gardens in Hartford, Conn., urged that individual gardens should be apportioned out to the pupils. There were other short addresses.

About 100 school teachers and other persons interested in horticulture were present, and manifested great interest in the addresses.

The general opinion was that school gardens are a good thing, but that proper methods for their establishment and care are not always easy to find.

AN OUTDOOR CLASS.

J. G. Jack began, on April 21, his 15th year of informal outdoor talks on plants, trees and shrubs, in the Arnold Arboretum, Boston, with a class of 28 women and three men.

Different botanical groups will be examined. No technical knowledge or special preparation is required in order to join the class, as the instruction is intended to be simple in character, affording opportunities for questions and answers.

The class will meet each Saturday morning at 10 o'clock, continuing until June 23.

I congratulate you on the excellent issue you turn out every week, and am pleased to see that it has become quite a popular paper.—H. J.

The Cottage Gardens

Contain the finest assortment of selected specimen Evergreen, Deciduous Trees and Shrubs procurable, and its Landscape Department is at your service in arranging them. Price list ready now. Has tables of the best herbaceous plants, giving common and botanical names, height, color and season of bloom. Sent free. All inquiries cheerfully answered.

COMPLETE LIST OF HARDY PERENNIALS AT SIMILARLY LOW PRICES

PALISADES NURSERIES, SPARKILL, N. Y.

PUBLICATIONS RECEIVED.

Southern Floral Nursery Co., Fruitdale, Ala. Trade price list of cannas, gardenias, roses, etc.

Bulletin No. 186 of the Agricultural Experiment Station at Urbana, Ill., by Charles S. Crandall, is devoted to the relative merits of liquid and dust applications in spraying apple trees.

The Fern Bulletin, Vol. XIV, No. 2, published by Willard N. Clute & Company, contains interesting scientific notes regarding American ferns. Illustrated with a drawing of Polypodium piloselloides.

Bulletin No. 194 of the N. J. Agricultural Experiment Station, at New Brunswick, N. J., is a very comprehensive work on the subject of spraying. It covers the entire subject in a concise and very practical manner.

Early Flowering Chrysanthemums issued by the National Chrysanthemum Society, C. Harman Payne, secretary, London, England, is a bound volume of thirty pages, containing a report of the proceedings of the conference on early flowering chrysanthemums, held at the Crystal Palace, October 4, 1905, and a number of valuable papers which were read at the meeting. Among the latter are The History of Early Flowering Chrysanthemums by C. Harman Payne, Early Flowering Chrysanthemums for Market by Eric F. Such, Early Flowering Chrysanthemums for Town Gardens, by J. W. Moorman, and by E. F. Hawes, Early Flowering Chrysanthemums for the Garden, by D. B. Crane, and Decorative Value of Early Flowering Chrysanthemums, by George Gordon.

SEED TRADE.

The Iowa Seed Company have bought the business of the Morris-Blair Floral Company, at 308 Seventh street, Des Moines, Ia., and contemplate changes that will make this a model florist establishment. The Iowa Seed Company already have twenty-four greenhouses, and the property now acquired will make it the largest operating floral company in Central Iowa. Since opening the first cut flower store in Des Moines twenty-two years ago, Charles N. Page has made rapid advances, and in his connection with the Iowa Seed Company has built up an enviable business for the firm.

INCORPORATED.

Conner-Ulsh Floral Co., at Wabash, Ind., Directors, J. D. Conner, Jr., C. T. Conner, Alonzo Ulsh. Capital, \$5,000.

Carman's Antipest

INSECTICIDE AND FUNGICIDE

For the Garden, Orchard and Greenhouse.
Nonpoisonous and harmless to vegetation.

H. R. AKERS, Chatsworth, N. J.

OBITUARY.

John McDougall died at his home in Norwich, Conn., on April 18, aged 66 years.

Paul T. Berg of Norwalk, Conn., died at his home, 65 Woodward avenue, on April 16. He had been connected with the Smith greenhouses for many years as superintendent. A widow and two sons survive him.

IN MEMORIAM.

Count Kerchove de Denterghem.

On several occasions recently we have referred to the serious losses to European horticulture by the death of various well known men. Belgium in particular has been a severe sufferer and in losing Count Oswald de Kerchove de Denterghem the Royal Agricultural and Botanical Society of Ghent, of which he had been for so long the honored president, will be placed in a position of considerable difficulty to find a man worthy of occupying the vacant place.

The Count Kerchove de Denterghem was a familiar figure to all European horticulturists of any note. He was a man of imposing stature, a genial courteous gentleman whom we well remember meeting for the first time nearly seventeen years ago at Ghent.

Like his colleagues the late M. de Meulenaere and M. Ernest Fierens, both members of the same society, he was a lawyer by profession and an amateur gardener of world wide repute. As an author and contributor to the horticultural press he was also well known as a competent authority on the matter upon which he used to write. Every visitor to the great International Horticultural Shows at Ghent will remember the Count's warm welcome and his invariable urbanity. He spoke English, among his many other accomplishments, quite well, and has often received visitors from this side of the Channel in a way not to be easily forgotten.

He had filled many important positions in his own country and his death so entirely unexpected to those outside his own immediate circle of friends will create a great void, more especially at the next Quinquennial show at Ghent for which preparations are now in active operation.

Count Kerchove was born in 1844 and died on the 20th March last being in his 62nd year. He was an officer of

the Order of Leopold and held other decorations.

C. HARMAN PAYNE.

NEWS NOTES.

Patrick Sampson, of 101 Twenty-first street, Brooklyn, N. Y., has been missing from his home since April 14.

J. J. Lampert of Xenia, O., and his sons, have formed a stock company and will carry on a wholesale florist business.

James E. Andrews has purchased the Clarence E. Barker property in Billerica, Mass., and will carry on a florists' business.

Robert Dougherty of Natick, Mass., has purchased the greenhouse and land of Mrs. A. C. Pond at W. Medway, and has taken possession.

W. H. Waite, formerly located at Castlewall, Elberon, N. J., has been appointed superintendent on Senator Dryden's estate at Bernardsville, N. J.

Reed & Keller, with characteristic enterprise, have patented a device for holding cycas leaves in position in the making of cycas bunches in florists' funeral work. It is worth looking into. Write to them at 146-148 West 25th street, New York.

HENRY F. MICHELL CO.

Seed Importers and Growers

1018 Market St., Philadelphia, Pa.

**ODONTOGLOSSUM CRISPUM PIT-
TIANUM.**

The cut shows an individual flower of *Odontoglossum crispum Pittianum*, reduced to one-half its diameter. This is the variety which brought the record price of \$5750.00 at a recent orchid sale in London, the purchaser being Sander & Son of St. Albans. This beautiful *Odontoglossum* has twice won the gold medal at Manchester and is called the best blotched *Crispum* in existence. The flowers are described as white, slightly tinged with rose, the sepals and petals being heavily blotched with red-brown, the reverse side heavily tinged with purple. The labellum has a yellow crest marked with reddish lines, in front of which are brown spots on a white ground. The specimen sold bore three bulbs, two with leaves and young break.

PROGRESS IN BALTIMORE.

For four years the Baltimore people have had no flower show. They used to have good shows, but the deficits discouraged them. Now they have taken courage once more and are to have a show the coming fall on new lines. At the monthly meeting of the Gardeners' Club, held on the 23rd inst., a guarantee fund of ample dimensions was promptly subscribed and competent committees appointed to push the enterprise forward to a successful conclusion. Encouraging words are spoken by Fred. J. Michell and other visitors from Philadelphia; the members who spoke evinced great enthusiasm which argues well for the success of the venture. Subscriptions to the premium list were opened as soon as the guarantee fund was assured and a good beginning made. President W. Lehr appointed the following committee to take general charge of the show: George Morrison, chairman; Albert Feidler, Fred. C. Bauer, Jno. J. Perry and James Glass. A spirited debate took place at the same meeting as to who had the best of it, "The Grower or the Retailer." The orators who distin-

guished themselves were Fred Burger in the role of diplomatist, Isaac H. Moss as humorist, and Fred C. Bauer as philosopher. Thos. Patterson was good, but one sided; Phil Walsh was undecided, and Jno. Perry, as wholesaler, tried his best to squirm out, but it was hopeless. Chas. Seybold made a good vice-chairman while President Lehr was out on committee duty, and contributed considerably to the enthusiasm of the meeting. The Maryland Horticultural Society is to be asked to combine its show with the Baltimore exhibition. A suitable hall has already been promised, free of charge, and all members of the club are to be enlisted as volunteers in the sale of tickets, and prizes are offered for the best workers in that connection. The press is to be well supplied with reading matter, tickets and bouquets. The school children are to be admitted free in the morning and many other things done to make the show a success.

Gov. Herrick violet has rapidly risen to a leading position in the Boston cut flower market. Its unrivalled color is a strong point, and another quality which is much appreciated is its disposition to continue blooming until late in the spring.

The disappearance of Wm. Woods, of Lenox, Mass., mentioned in our issue of last week, proves to have been a case of suicide, his body having been found in a pond nearby.

CUT FLOWER MARKET REPORTS

BOSTON As our price quotations indicate there has been a big downfall in flower values in this market since last week, and the initiated will easily imagine the truth of which this is the consequence, that the market is overloaded with material for which there is no outlet at present. It seems to be a case of over-production rather than of under-demand, as all the retail stores have a busy aspect and there is no complaint from those dealing directly with the public as to bad business. The retailer can make money easily under prevailing conditions.

The market has been **CINCINNATI** badly over-stocked with cut flowers ever since Easter. Business has been fairly good, but the supply has been something enormous. Roses, carnations, violets, sweet peas and bulbous stock in variety continue to arrive in such quantities that the ice boxes are taxed to their utmost capacity. The weather has been warm and the bulk of the stock is soft and unsalable the day after it is cut. Harrisii lilies and lily of the valley are about the only flowers in demand and of which there is not an over-supply. In consequence prices have taken an awful drop on everything. This week, however, promises to be somewhat better as the supply of bulbous stock is about exhausted. Violets are getting small and will soon be out of the market. Several large weddings are booked for the near future and business promises to be good for some time to come. The street fakirs are in their glory now and can be seen on every downtown corner selling stuff at prices which cause us to wonder what the grower gets.

COLUMBUS We all expected after the splendid business that was done Easter, that there would be a little trade for awhile, but have been most agreeably disappointed. The past week has been one of the best we have had this year. Prices, of course, have fallen back to where they were before Easter week; in some stock, especially carnations, not quite so low perhaps. Carnations, although in large supply, have been in such good demand that fifty cents a dozen is the lowest we have been obliged to sell them since Easter. Other stock in good supply and selling freely at usual rates. Had the terrible San Francisco calamity not occurred, there is no question but that business would be very brisk; this fearful thing has cast a sadness over the whole city, and many of the craft will be most anxious until they receive word from their relatives and friends who were in that city.

DETROIT The business here since Easter has fallen off some. We find the stock at the commission houses getting back to itself again and the prices reasonable. Roses are becoming plentiful along with carnations and violets. Sweet peas are being sold more regularly of late and are of good quality. Spring weddings are beginning to take effect and business will soon be in full swing again.

LOUISVILLE Business conditions the previous week were generally a little slow in the way of sales, while stock usually was plentiful. Carnations found very good demand, the quality and supply being satisfactory. Roses were in great supply and of satisfactory quality, the demand being good. Lilies of the valley, sweet peas, migno-

nette and forget-me-nots, found their demand, with the supply usually adequate. Violets and bulbous stock are nearly at an end. Green goods can be had in fair supply.

PHILADELPHIA The condition of the cut flower market last week was not nearly so satisfactory the latter as it was the early part of the week; the warm weather coming on the latter part of the week hurt things very much and brought an immense quantity of flowers which glutted the market on almost all kinds. Stock was generally good—did not seem to be affected by the warm weather. Beauties moved in fair shape in fact rather better than some of the other roses, considering the existing conditions.

There were quite a few weddings in the early part of the week which of course helped business wonderfully. Prices continue dropping on all classes of flowers; this was particularly noticeable on carnations which were quite a little more plentiful. Tea roses also suffered in the same way; possibly more so than the carnations. Saturday, which is generally considered one of our best days, was a great disappointment all around, a quantity of cut flowers being carried over into the next week.

BUSINESS CHANGES.

The Rose bank Floral Co. have given up their store at 136 East Fourth street, Cincinnati. It is understood that they have moved to Lexington, Ky.

Reed & Keller, the wire work and rustic supply manufacturers have acquired several floors in the building adjoining their establishment on West 25th street, New York, and will take possession May 1st. This will give much-needed additional room for a rapidly developing business.

Easter Reports Received Late.

BUFFALO Although a little late in making the Easter report, it may be said that the Easter trade in this city was a success. Four days of cloudy weather, with abundance of rain at the beginning of the week, saddened the hearts of many; but on Friday the day opened with sunshine and all had smiles.

The plant trade was excellent, reports stating all sold out at noon Saturday. No lily plants were to be had; medium price azaleas were in big demand and were bought up as quick as unloaded; hydrangeas, bougainvilleas, ramblers, rhododendrons, and pans of bulbous stock in superior quality sold well. The cut flower trade was equal to previous years. The beginning of the week found carnations and lilies scarce, but roses and other stock plentiful. On Saturday, up to noon, stock poured in as fast as could be handled. Colored carnations were in good demand, but an enormous lot of white was had which did not sell as fast as desired. Violets were of good quality and sold well. The demand on roses was weak; same on bulbous stock, and a considerable amount was carried over, together with mignonette, which was overplentiful. A good supply of callas was had and sold well. The shipping trade was good and everyone well satisfied with the 1906 Easter business. Since Easter there has been a scarcity of carnations, only lasting for two days. At the time of mailing the report the market is overstocked on all lines and business is at a standstill with prices very low.

DETROIT Mild weather made the wrapping of plants or the heating of delivery wagons unnecessary and plants were transferred in open wagons and vans without risk of injury, a great convenience to all concerned. The demand was very steady throughout Friday and Saturday for plants as well as cut flowers and but little was left to be disposed of on Sunday morning. Fifty cents to \$5.00 each was about the range of plant values; a few larger and higher priced ones were left over. With so heavy a business to be done anything below 50 cents is a nuisance and loss to the dealer. Stock of cut flowers was very poor in a majority of cases. Carnations were marketed on Saturday morning which at night were fit only for the rubbish pile and a great many roses were in the same condition. Mignonette was not up to standard. Violets were considered good for this time of the year and sold all right to the limit. Lilies in plant form and as cut flowers were disposed of in large numbers, the wholesale houses supplying the demand with great difficulty. Sweet peas were good sellers but in more than sufficient supply. Daffodils and tulips, cut and growing in pans, sold well, as did also hyacinths. Rambler and Baby Rambler roses were in beautiful shape and were all disposed of. For American Beauty the demand was light. Pot covers in various designs and material were generally used in plant sales. The universal report from the stores

is that the business was the largest they ever enjoyed at Easter.

INDIANAPOLIS Reports received from all sources are to the effect that the past Easter business was the largest ever done in the city. Plant sales were far in excess of cut flowers. Nothing new was to be seen in plant arrangements. Made-up baskets and various shaped bark boxes and twig baskets, as usual found ready sale. Well grown lilies were to be seen in abundance everywhere and supply seems to be about equal to demand. There was a slight advance in prices of Beauties and teas, and everything desirable sold out well. Bulbous stock sales were better than former years, as quality was above the average and at the usual prices.

ST. PAUL AND MINNEAPOLIS

The weather man tried his best to wreck the Easter trade this year, but in spite of rain and wind, snow and cold, the florists of Minneapolis and St. Paul have much to be thankful for. Until Saturday evening the weather was very stormy and many of the regular customers beside the transient buyers were kept at home. However, the more venturesome spirits and those whose daily work took them down town, rain or shine, made up for the bad weather, and by Sunday morning there were but few good plants to be had. Easter Sunday was a beautiful day, and cut flowers were dealt out as rapidly as the clerking force could handle them. Roses, carnations, tulips and jonquils were the most in demand and violets were cleaned out long before noon. All the stock was of the best and commanded the highest prices. Among the potted plants, lilies taking the lead, azaleas, hydrangeas and hybrid roses sold out first. Violet plants sold well but they were not of the best. Spireas brought prices beyond expectations, and Boston ferns finished the list. Altogether everything went off well, considering the efforts of the weather man to the contrary, and with Easter and the day after clean-up over, we are ready to turn our attention to the post-Lenten bride and the sweet girl-graduate.

**200,000 SQUARE FEET OF GLASS
HEATED IN 1905**

PRETTY FAIR. Not connected with any combination or trust.

Read the following from J. D. Cockcroft,
Northport, Long Island, N. Y.

Mr. Wm. Lutton.

Dear Sir: I wish to express my entire satisfaction of the heating plant that you installed in my three new combination houses, 33-117; we have not the slightest difficulty in maintaining the temperature, and I am well pleased with the boiler.

Original copies of the above letters with numerous others on file at my office. Will furnish you complete or separate estimates on your heating and building.

Some Private Work.

Mr. Wm. H. Lutton,

Dear Sir: I am well pleased with the heating of our new palm house; your work has been done in a satisfactory and workmanlike manner, true to the letter of your contract, which means first-class work. You can have the liberty to use my name, and can refer anyone to me, and I shall give you the credit that you are justly entitled to.

Yours respectfully,
John Shore, Supt.
Wm. H. Macy, Esq., Harrison, N. Y.

WM. H. LUTTON, West Side Avenue Station,
JERSEY CITY, N. J.

The Standard Steam Trap

Certificate of merit awarded at Washington, D. C., Florists' Convention. For simplicity, durability and perfect satisfaction it has them all guessing. It is in a class by itself. To see it work a large plant as well as a small will convince the most sceptical that it is the Florists' Friend.

The Standard Ventilating Machine still leads as the most durable, easiest working and the all-around satisfactory machine.

The Duplex Gutter is gaining all the time, over 12,000 feet sold thus far this season. Catalogues free.

TO BUYERS

Patronize our advertisers, they will treat you right

It Doesn't Matter

how good your intentions may be, how good the people you get to do the job, how good the materials used—if the plans are not right, the greenhouse is not right. By plans we mean its economical arrangement—the right thing for the right place. We are first of all plan makers—then manufacturers.

Three Sterling Carnation Novelties

Winsor, White Enchantress, and Helen M. Could

There is nothing about any of these varieties that we wish to conceal; therefore, we cordially invite all carnation growers to pay us a visit. Come at any time.

WINSOR—Winner of Lawson Silver Medal.

This is sure to prove a winner. Nothing approaches it in color, which is a clear silvery pink—a shade between Enchantress and Mrs. Thos. W. Lawson—and much more beautiful than either. In fact, it is just the shade that we have all been trying to get. The color will make it sell in any market. The stem is just right. The flowers are considerably larger than Lawson and much better shaped. As a grower it has everything that can be desired. So far we have not seen any large-flowering variety quite so free as Winsor.

WHITE ENCHANTRESS.

A pure white sport of Enchantress, at once the most popular and most profitable carnation grown today, on account of its size and stem and freedom with which it blooms. White Enchantress is identical in every respect but color. Those desiring quality as well as quantity will find it in White Enchantress.

HELEN M. COULD.

This is a beautiful variegated sport of Enchantress. The ground color is a lovely shade of clear pink, the variegation carmine, making an exquisite combination of colors, besides being something distinctly new. At a short distance the variegation does not show at all, the general effect being a beautiful shade of dark pink. Growth, habit, size, and stem are the same as Enchantress.

We have fine stocks, from which we can deliver healthy cuttings of Variegated Lawson, White Lawson, Red Lawson, Enchantress, Mrs. M. A. Patten, Lady Bountiful, etc.

Our Variegated Lawson is all that we claimed for it last season, and is giving the fullest satisfaction everywhere—the best in the variegated class. Come and inspect our stock of new and standard sorts

F. R. PIERSON CO.,

TARRYTOWN-ON-HUDSON, NEW YORK.

LAST CALL FOR CARNATION PLANTS

		per 100	per 1000
4000 strong selected Robert Craig from pots,		\$12.00	\$100
1000 " " Octoroon " "		3.50	30
5000 " rooted cuttings Enchantress,		3.00	25

Robert Craig Still Ahead

TABLE OF RETURNS

Per square foot of Bench surface for blooms sold from September first until April first. In this computation Robert Craig has not been credited with several thousand blooms used for exhibition purposes:

Robert Craig	.55	8-10c	per sq. ft.
Enchantress	.47	1-10c	" " "
Mrs. Patten	.33	9-10c	" " "
Lady Bountiful	.28	1-2c	" " "

Thus our claim that Robert Craig is a first class commercial carnation is proved by the results obtained in actual practical commercial cultivation.

Send your orders promptly as the Cottage Gardens will cease making a specialty of growing rooted cuttings for sale after the present shipping season and will devote its entire plant exclusively to growing cut flowers for the New York market.

THE FLORISTS' SUPPLY
HOUSE OF AMERICA

56 North 4th Street - - - PHILADELPHIA, PA.

DREER'S SEASONABLE SPECIALS.

New Dwarf Giant Flowered Ageratum "Inimitable."

A revelation in Ageratums, flowers and truss double the size of the best varieties now on the market, habit compact very free, \$1.00 per dozen, \$8.00 per 100.

New Paris Daisy Queen Alexandra.

Has become very popular as an Easter plant this season. We introduced this plant to the American markets this year predicting a great future for it. Its popularity this season more than bears us out on this. 2½ inch pots, 60 cts. per dozen, \$4.00 per 100.

The finest Cactus Dahlia for Cutting, "Kriemhilde."

We can still supply field grown roots of this most popular Dahlia, \$1.25 per dozen, \$10.00 per 100.

New Cactus Dahlia, Victor van Scheffel.

On the general style of Kriemhilde, but of a more pleasing pink color even than that variety, undoubtedly destined to become a leading popular sort. Field roots, \$3.50 per dozen, \$25.00 per 100.

New White Cactus Dahlia, Florence M. Stredwick.

A variety that created a sensation in England as well as on the Continent during the past two seasons, awarded many first class certificates, undoubtedly the finest white Cactus Dahlia yet introduced. Green plants, 15 cts. each, 75 cts. per dozen, \$5.00 per 100.

Dracaena Indivisa.

A fine lot of 5 inch pots, \$2.50 per dozen, \$20.00 per 100; 6 inch pots, \$3.50 per dozen, \$25.00 per 100.

Roses Baby Rambler.

4 inch pots, \$3.00 per dozen, \$25.00 per 100.

5 " " 4.50 " " 35.00 " "

Hybrid Tea Rose Killarney.

Strong two year old plants of this finest of all bedding Roses, \$4.00 per dozen, \$30.00 per 100.

Hybrid Perpetual Rose, Frau Karl Druschki.

This is really the first white Hybrid Perpetual Rose yet introduced, beautiful in color, a free bloomer, a healthy vigorous grower, fine two year old plants, \$3.00 per dozen, \$25.00 per 100.

We make a specialty of Roses in pots, large plants suitable to sell to your retail customers. Over 150,000 plants are now in 5 and 6 inch pots in the best possible condition for outdoor planting. We are Headquarters for Hardy Perennials, Aquatics, Water Lilies, Dahlias, Decorative Plants, Palms, Ferns, etc., as well as a general line of Florists' Stock, all of which is fully described in our current Wholesale List, a copy of which we shall be pleased to mail to any one in the trade. Issued quarterly.

HENRY A. DREER, 714 Chestnut Street, Philadelphia, Penna.

DAHLIA, KRIEMHILDE.

SURPLUS ROSES AT SPECIAL PRICES.

The three most popular and best bedding Roses, Pink Maman Cochet, White Maman Cochet and Hermosa. These are strong field-grown plants, which were potted up into 3-inch pots during December. They were stored in cold houses, are now in fine growth, well rooted and in best condition for spring trade. We have too many and offer for immediate delivery as long as the surplus lasts, at \$2.00 per dozen; \$15.00 per 100; \$125.00 per 1000.

ANOTHER CLEARANCE SALE OF HARDY PERENNIALS, ROSES, FLOWERING SHRUBS, DAHLIAS, ETC.

all in first class condition, at prices less than cost, to reduce larger stocks than we need for our regular trade. This is an exceptional opportunity to secure reliable stock for planting out, either for stocking up or filling orders. Our Perennials are all field grown (except where noted). Florists and others know their superiority over small pot plants. Prices are quoted F. O. B. Sparkill, N. Y. Net cash less 5 percent, when cash accompanies orders. Not less than 6 of any one variety sold at the dozen rate, 25 at the 100 rate, and 250 at the 1000 rate. (Numericals indicate size of pot.)

The Rock Garden

Illustration From Catalogue of Fred'k W. Kelsey.

The season is again here when the first flowers of the early spring can be found peeping up, as each spring day brings forth new life among the occupants of a well-planted rock garden. The collection which we have among our rocks is too large to give it a full description, and many varieties have been only tested for this past season and can not be yet described as to their effectiveness of blooming or even hardiness, but a few varieties are well worth a notice. One of the most effective and the first to bloom as the snow melts away is *Primula rosea grandiflora* which is a very bright and soft rose and a very free bloomer with a straight stem six inches above the ground and with a small narrow lanceolate brownish leaf. *Primula denticulata alba* with a dense round head from two to three inches across and with deep broad leaves powdered with sulphur yellow under the leaf, is a splendid companion to the similar variety *denticulata* with purple flower blooms at the same time. *Primula acaulis* with its blue, and even indigo blue is a great favorite and very much admired at this moment. *Primula veris* with its great variety of color is appropriately called the bride of spring. The English cowslip, as it is called, is not as largely cultivated here as its beauty deserves. A beautiful miniature of the same family is *Primula farinosa* with a rosette of green foliage, silvery underneath and umbels of rosy lilac flowers which in groups of a couple of dozen plants is a splendid sight. *Arabis alpina* is a very desirable plant; a large patch among the rocks with its wooly whitish leaves and abundant flowers of pure white is a grand sight. There is a double variety which is a great im-

provement on the single. This variety must be propagated from cuttings, while the other is grown from seed. *Alyssum saxatile compactum* or rock mad-wort is a true companion for the above varieties, with *alyssum saxatile flora plena*, both being of a bright golden yellow.

Anemone pulsatilla, or pasque flower, grows from 9 to 12 inches high, producing a violet or purple, quite large flower. *Anemone sylvestris*, or snowdrop wind-flower, is a large cup-shaped pure white flower on clean straight stems held well above the handsomely cut foliage, one of the most satisfactory plants for rock gardens. There is *Elza Fellman*, a double flowering variety of the same growth, dwarf and very interesting. *A. Hudsonianum alpinum*, and *Halleri* from the Swiss Alps are good companions for the above and extremely interesting. *Ranunculus alpestris*, with a half-dozen other Alpine varieties has proven very hardy in this climate. *Papaver alpinum* with small, very compact, laciniated leaves and soft, silky and often beautifully fringed little flowers, from five to six inches high, are excitingly interesting. *Papaver nudicaule* is also a very nice variety for the rock garden. *Draba aizoon*, *armata*, *frigida*, and *pyrenaica* from the Swiss Alps have proven hardy and with their white speck-like flowers are very interesting.

Iberis saxatilis, *sempervirens*, and *stylosa*, or candy tuft, are indispensable in a rock garden. *Viola cornuta*, *lutea* and *alba*, with many others are just a grand sight and cannot be left out. We have also a number of the very old varieties of *dianthus* including *Dianthus deltoides*, *arenarius*, *alpinus*, *glacialis* and *moshotas*, all

dwarf, their flowers single and very fragrant, which are universally beloved alpine pinks, *Viscaria utriculata* with lanceolate leaves and pale yellow flowers in clefts of rocks, and *Helianthemum vulgare*, the English rock rose, yellow, occasionally rose-colored, cover quickly, and have proved very hardy here; *Saponaria ocymoides*, a spreading plant with a delicate rose or pink flowers and leaves lanceolate, also stood the winter well.

Silene ahafla, a pink flower of six to eight inches high, is one of the best varieties for our climate. It comes from Switzerland and Pyrenees. *Lychnis alpina*, flowers pink in compact cymes, leaves lanceolate, stem 3 to 6 inches high, grows at high altitudes in Switzerland, Dauphiny and Pyrenees, and does well here, having passed two severe winters. *Linum alpinum*, or flax plant, flower azure blue, is highly recommended for the rock garden. *Dictamnus* var. *albus*, flower pink, from the stony hills of southern Switzerland, is a very desirable plant. *Coronella minima*, flower yellow, 4 to 8 inches high, plant prostrate, comes from southern Switzerland, Jura and Pyrenees. *Dryas octopetala* is a charming alpine plant, flower 1 to 1 1/2 inches in diameter, white, calyx covered with black glandular hairs; leaves oblong-ovate, crenate, covered with a white wool on the under side, stem prostrate, fruit very feathery; this alpine plant, very striking both in flower and in fruit, is frequent in high pastures in the Alps. Among the saxifragas of special value we have *corniculata irrigua*, *cotyledon*, *longifolia*, with many other varieties too numerous to describe at present. All are a most interesting family in the rock garden.

Among the sedums we have the following varieties which have done well in this climate: *cruciatum*, *reflexum*, *origanifolia*, *aizoon*, *nianse*; we can not have too many of this most interesting family. The *sem-pervivum* collections also have an honored place in a rock garden, and are much in demand. The *campanula* varieties best adapted for the rockery are all the very dwarf varieties such as *alpina*, *longifolia*, *linifolia*, *ruela*, *pulsilla* and *carpathica*, with many other alpine species. *Aster alpinus* is one of the grandest flowers. *Leontopodium alpinum* or *edelweis* is too well known and should never fail in a rock garden, as it is easily produced from seed. Of the *androsaces* from the high Alps some six varieties have done well with us, and are very interesting.

Cyclamen repandum flower red, longer than that of *C. europæus*, throat of corolla not toothed, leaves cordate ovate somewhat angular, root stock elongated, from Pyrenees and Switzerland, has proved hardy with me, and is a very interesting plant. *Polemonium reptans*, flower lilac purple, 8 to 10 inches high, is a very satisfactory plant for the rock garden. *Gentiana* is another very interesting Swiss plant which seems to pass our winters well. I have grown some six varieties which have not bloomed yet with us. *Ramondia pyrenaica* is a very interesting rare plant with us. The flower is large violet, solitary; fond of deep shady rocks. *Linaria alpina* is also one which should not be missed in a

rockery collection, flower violet with yellow throat, 4 to 6 inches high. *Erinus alpinus* is also a very low dwarf plant with a pink and white flower, but not always very hardy with us. *Veronica rupestris*, with small dark blue flower, seems to do well here.

J. F. Meas.

Cucumber Forcing

Cucumber forcing has attained large proportions with many greenhouse men, who make it a main winter crop or utilize it as a spring filler following lettuce, growing it with some companion crop as radishes or beans.

As the yield is only about one-half as great in the winter as during the spring, and the demand light until February or March, it has been found more advantageous to grow some better paying crop in the winter, to be followed in the spring by cucumbers.

The seed for the spring crop is sown any time after the first of January in three-inch pots half filled with rich loam (or on an old half-decayed inverted sod). Bottom heat is given, and as a precaution for "damping-off" a layer of sand is sprinkled over the surface, or the soil is sterilized previous to use. The seedlings should appear in three to six days, and as soon as the true leaves come out the pots are filled up with earth. This provides support and additional nutriment, and does away with repotting.

When six to eight inches high, or in about four weeks from seed sowing, the seedlings will be ready to transplant into permanent quarters, benches six to eight inches deep with bottom heat, furnishing the best conditions. The seedlings can be started in a hot-bed or small house and grown there until transplanting time. A crop can thus be started while the main house is still in lettuce, or whatever the cucumbers are to follow, the seed sowing being planned just enough ahead so the house will be empty when the cucumbers need the room.

The soil should be rich in organic matter. A satisfactory way consists in filling the beds four inches deep with decayed sod, and then finishing with a mixture of three-fourths garden soil and one-quarter well rotted manure. An inch of pebbles or clinkers in the bottom will help the drainage.

In setting the house it is well to plant twice as many plants as are finally desired, thinning out the weaker ones so that those left will stand three or three and a half feet apart.

Cucumbers require a warm temperature, the night range being 60-65 degrees, while the day range is 75-80 degrees or higher on several consecutive clear days. They demand a rather moist atmosphere, but the houses should be dried off every day or two, especially in cloudy weather, to control mildew. Plenty of air without di-

rect drafts is essential. Care must be exercised in watering not to keep the soil soaked all the time.

The cucumber is a gross feeder, and as the yield will depend on the feeding, stinting will not pay. Liquid manure once a week is a good fertilizer, while ground bone and wood ashes are desirable additions.

As the plants grow they need training on wires one foot apart, and pruning. The plants are trained either as single or double shoots, but as the cucumber is susceptible to crowding, the single shoot system will give the best results as a rule. To produce the double shoot system, the seedling is cut at the first axis above the cotyledons when it is young. This causes the formation of two shoots.

As soon as the fruit sets, which is usually in the first or second joint of the lateral, the branch is cut off at the next axis beyond. This induces a secondary branch, which is in turn severed when fruit sets, producing a third, which is treated in the same way, and so on. When the plant reaches the desired height it is pinched back.

As the staminate and pistilate organs are borne on separate flowers the latter must be fertilized by hand. They are distinguished by the embryo fruit below the blossom and fertilization consists simply by removing a staminate blossom and inserting it in a pistilate form.

Two general classes of cucumbers are forced, (a) the English sorts, and (b) the White Spine varieties, while a hybrid of the two is sometimes grown. The former, with their huge size, are not general favorites here, requiring as they do a higher temperature, bottom heat, greater shade, and a much longer time in which to reach maturity and ripen their fruit. The White Spine kinds mature a crop in sixty days and are not nearly so particular regarding temperature and environment.

The size of a crop varies greatly, as high as ninety fruits to a plant between April and June being recorded in one case. Forty is nearer the average. In eastern cities there is a steady demand at fair prices, \$1 to \$3 per dozen, February and March furnishing the best market.

R. Z. Adams.

Hybrid Amaryllis

Not until recent years have hybrid amaryllises become in any way common. Excepting *A. Johnsoni*, and some of the small-flowered species, you could not look at them for less than a guinea apiece. I give English currency because they could not be bought at any price in this country fifteen or twenty years ago. About ten years ago Kenneth Finlayson, then gardener for Dr. Weld, Brookline, Mass., went to work raising seedlings with *A. aurica* as a seed parent; and obtaining pollen from a few choice hybrids he had and some from his neighbors, he succeeded in raising a very fine collection. He made a splendid exhibit of these seedlings at the opening exhibition of the Massachusetts Horticultural Society's new halls, given by and under the direction of Prof. Sargent of Brookline, Mass., during the first week of June 19, 1901. To hold back such a superb exhibit so late in the season was a wonderful achievement.

Up to this time, it seems hardly any one had thought of raising seedlings; though they might have done so, for it was well known that Veitch raised them from seed—no easy matter in the English climate. But many things Veitch did it was thought impossible others could do; and somehow the notion was that it was too intricate a matter and required lots of waiting-patience.

About this time I happened to be on a visit to the late Wm. Robinson, then gardener to F. L. Ames of North Easton, Mass. He was no less proud of a dozen new amaryllis, than of his finest orchids; and, remembering I had then some blooms of *A. Johnsoni*, I begged a small quantity of pollen from some of his best.

It was done up in oil wax paper, put in my coat pocket,

and forgotten. Better late than never, I found it five days afterwards and used it, with the result of a good set of seed. The seedlings bloomed, some two, and most three years after, giving considerable variety, but no blooms up to the standard in size. Shortly after, the late H. H. Hunnewell of Wellesley imported a set of Veitch's best. Later an extra special set of new colors, from unnamed seedlings was sent, making an unequalled collection, where the finest white striped varieties were well represented. The accompanying

illustration is from a photograph of a seedling of this type. My predecessor, the late F. L. Harris, crossed a number of them but they did not bloom until my time. Since then we have raised another batch from carefully crossed selected seedlings. Still another will bloom next season and seedlings, just up, in two years' time. We are continually selecting and discarding inferior varieties.

No wonder they were expensive. It would take a lifetime to work up a stock from offsets, and from many varieties it would be impossible, as they do not make any. We never think now of bothering with offsets when giving them their annual overhauling, unless the variety be an exceptionally fine one. And, even so, we would rather cross this with another good one or two—crossing the separate flowers with different kinds, tagging them to note results later.

Raising seedling amaryllis is most fascinating work. You can nearly always tell what you will get. They rarely cross themselves. There is no seed unless they are artificially fertilized; and when one notes the way the flowers develop it is easy to see that this is so. The anthers always open and shed their pollen, or it stays on and becomes old before the stigmas unfold. No doubt this is nature's way of ensuring cross-fertilization. I have never tried fertilizing the stigmas with their own pollen. It was so plain (to me) nature intended otherwise, and besides, I would rather cross them with others, believing for one thing, the constitution would be improved and by proper selection, better form and color obtained. No brush is used. The long filaments answer well as a means of conveying the anthers to the flowers we wish to cross, by just pinching them off and lightly rubbing the stigmas with the anthers. A brush, however soft is liable to injure the stigmas of any flowers. In crossing other flowers I would rather take a whole flower, or part of it and either shake the pollen in, or lay the flower on it. It is not until the stigmas are unfolded and become covered with a viscid substance that pollenizing can be successfully done.

The seed capsules ripen in about six weeks, and have to be carefully watched when the sutures begin to part, as the large winged seed quickly scatter. It is recommended to sow them soon after being ripe, but we have found seed two years old to germinate quite readily. We have been told that seeds must be planted edge down. This advice, also, we have disregarded, and found it made no difference. Seeds sown in light loam, in a warm house, come up in about a month and may be pricked off in about another month and make good plants the first season. We prick them into deep flats (4 inches), and keep them in a warm house until well established or until the summer season comes, and then place them in a good light airy house. Probably they would do as well then, outdoors, if the narcissus grub did not trouble them. They are kept growing, or at least, kept watered and green all winter. When

March comes, they are not disturbed more than to take the flats carefully apart and move the contents bodily into larger flats, using good rich soil on the bottom and sides, with a top-dressing of Clay's fertilizer. Placed in a warm house they grow very fast. Later in the season they are moved into a light airy house to ripen, and we expect to bloom the majority the following spring—less than two years from seed. They will be rested enough to get almost dry, though still retaining their foliage.

Mature bulbs—old bulbs—are usually stored quite dry—dry enough to wither up the leaves. I have become convinced, however, from experience that this severe drying is wrong and shall do it no more. They will be watered about once a week or enough to keep them slightly moist, even though they hold their leaves all winter.

In starting old bulbs into growth, a month or five weeks before flowers are wanted, they are given a good soaking and allowed to dry out. A little now and again only wets the surface and does no good, and without a good soaking after a plant in a pot once gets quite dry, it never takes water properly. After they are started, we clean off the old soil as deeply as we can, without disturbing the roots, and give them a top-dressing of good rich soil, and this with a little liquid manure will see them through the season.

J. D. Hatfield

Our Supplement

The beautiful lobelia, which is the subject of our supplement this week, is a variety of *Lobelia speciosa* originating in a chance seedling. As will be seen, the flowers are very large and full double, and in color the variety is entirely distinct from all others. It produces no seed, but propagates readily from cuttings.

Thunias

Thunias were repotted in March. After the flowering season is over and the stems have matured their growth these plants should have a thorough resting and ripening of the stems. Therefore, since last fall they had been resting on a shelf in the rose house. There they had plenty of light and during the whole of the winter they have not received one drop of water. If potted annually they give much better results and in fact this is the proper way to grow them. Clean pots and thorough drainage are very essential. Use a compost of fibrous loam, dried cow manure and a dash of clean sand. Five or six inch pots make a convenient size. Several stems, according to size, may be put into each pot and staked neatly. The stakes keep the plants from moving until they get hold of the fresh compost.

Water must be given very sparingly until the plants get established and the young growths well above the compost. Afterwards, they require a liberal supply of water and when they have made good roots occasional waterings with liquid manure give good results. After the flowering season, when the leaves begin to get yellow, then water must be given more sparingly and should be gradually lessened until the plants are finally at rest.

After potting, as they are great lovers of moisture, we place them in the store where they get good light, plenty of heat and where they can be syringed regularly. In such a position they will produce stout, stocky stems which are sure to give a good supply of flowers.

Thunias are natives of India and are found widely distributed over the Himalayan mountains, Moulmein and Lower Burmah, and it is said by collectors that they are quite common in these regions. Several collectors report that they found them growing on trees in the damp forests at an elevation ranging from 2000 to 3000 feet. From this one would learn that thunias are epiphytic orchids, as they are said to grow on trees. Yet we have always grown them as terrestrial orchids, and we have had good results. Here is another case where it does not make much difference what the potting material is if the man with the watering pot just knows at what time, other conditions being right, to give and withhold water and stimulants. It is the same with nearly all orchids; there is so much humbug written about their being grown in leaf mould and other potting materials. The whole thing depends upon the man that waters carefully and knows by experience just the right time to supply the wants of each plant with water and stimulants.

A few years ago English growers recommended growing *Dendrobium nobile* entirely in sphagnum moss and potting them annually. A few days ago Mr. Watt from Wellesley College was visiting here and I made

inquiries about the large specimens of *Dendrobium nobile* which Mr. Butler used to grow and he told me that a neighbor had a plant that was better in every way than those Mr. Butler had grown and the strange thing about this plant is that it was grown in fibrous loam. So one can have them growing in peat, sphagnum and loam and all doing well if other conditions are right.

When travelling about in the West Indies I tried to learn as much as possible from orchids growing under natural conditions. I never could find much leaf mould about the plants and, in fact, many of them were a mass of roots clinging most tenaciously to the trees they were growing upon. There is no doubt there are many things in a tropical atmosphere that we can't produce in our greenhouses and I think there may be more nourishment got from the tropical rains than from the water which we supply our plants with. I think that with our orchids we are too sparing with light. In the forests where they grow naturally there are very few orchids found on the lower branches but they are abundant away at the tops of the trees where they can get more air and light.

Returning to our thunias, they begin to blossom about the end of May, continuing right along to July. The flowers are produced from the ends of the stems in drooping racemes and are very pretty when the plants are well grown. When the stems are full grown they attain a height of about three feet.

Thunia alba is a common kind and has been in cultivation since away back in 1836. The sepals and petals are pure white and the lip is white, veined with purple and yellow.

T. Bensoniæ is the most richly colored in the genus. It has flowers three inches to four inches in diameter, of a beautiful bright magenta purple color. It was discovered by Colonel Benson on the mountains of Moulmein in 1866. *T. Marshalliana* resembles very much *Thunia alba*. It has white sepals and petals, and the lip is white at the front, the other portions pale yellow veined with bright orange. There are several varieties of this species in cultivation.

T. Veitchiana is a hybrid between *Marshalliana* and *Bensoniæ*. The flowers are white, the tips of sepals and petals shaded with mauve and purple markings.

Thunias are probably the easiest to handle of all the orchids and if given a fair chance they hardly ever fail to produce their pleasing blossoms.

Cactus dahlia

The Pilot

This beautiful novelty, a colored plate of which was sent out by us as a supplement with our issue of April 21, is not for sale in this country yet so far as we can learn. We have had so many inquiries from readers who wish to secure the variety that we make this announcement for general information. No doubt American dealers will be able to supply plants or tubers for next season.

A reflection

on the seed trade

We are not a little surprised at the statement attributed to Robert Veitch in his address before the New London County Horticultural Society to the effect that all vegetable seeds sold under a variety of names "come out of the same bin." We have known Mr. Veitch as florist and seedsman for a great many years and cannot believe it possible that he would make a statement reflecting so monstrously on the integrity of the seed dealers. One New London daily in its account of the meeting refers to Mr. Veitch's alleged assertion as "giving away trade secrets." Such an unwarranted imputation coming from a gentleman so well known, and widely disseminated through the medium of the public press cannot fail to do serious injury to a reputable business.

San Francisco's parks her best asset

In the multitude of arguments that have been advanced from time to time in favor of the establishment of public recreation areas in cities, none have been better founded than the one which has been so forcibly impressed upon us in the recent calamity in San Francisco. The open reservations in the devastated city, whitened with the temporary shelters of thousands of homeless people, of whom many would undoubtedly have lost their lives had the parks not existed, will stand for all time as an impressive reminder to those entrusted with the duty of providing for the protection and welfare of civic communities, of the great responsibilities they are under, for which they may be called to account without a

moment's warning. What matters the expenditure for San Francisco's parks when compared with what they meant to her suffering people in one awful night? We can all realize now how very much more than mere pleasure grounds these public domains may prove themselves to be and after such an experience neglect to make liberal provision for them, not alone on the outskirts but right in the most densely populated centres would seem almost criminal.

Extending the commercial cut flower list

Anyone who has followed the course of the wholesale flower markets for a year or two past must have noticed the great increase in the sale of flowers once classified as "odds and ends" but which have now reached the dignity of steady values per hundred bunches and are regularly called for in the better-grown grades by the leading retail stores, where they are considered an essential part of the everyday supply. We allude to myosotis, stocks, pansies, snap dragons, coreopsis, daisies white and yellow, etc., and might include even sweet peas which although now carried in hundred and thousand lots in the average florists' stock were until very recently represented only by a tiny vase or two occasionally seen. A notably sudden popularity is apparent in the case of the new daisy Queen Alexandra which was extensively advertised in these columns last year as a novelty. This tendency to widen the variety in commercial cut flower stock will meet with much approval and should be encouraged by those who realize that the cut flower trade must extend its sphere beyond the rose, carnation, chrysanthemum, violet, and bulb flower group if it is to keep pace with the popular sentiment. Greater variety is the demand of the public and there is a wide range of good material available from which the responsive grower may select.

An ominous advance in express rates

The announcement of a big advance in express rates on cut flowers by one of the companies carrying quantities of flowers to the wholesale markets in New York has an ominous look and if submitted to without emphatic protest is likely to be the forerunner of an equal advance by all the other companies throughout the country. When similar action was taken by the express companies some two or three years ago, prompt work on the part of S. A. F. officials brought about a restoration of the old rates, thus saving many thousands of dollars to the flower growers and shippers. It is notorious that scant gratitude was shown by those who were the beneficiaries through this interposition in their behalf by the national society. There are, in the society's archives, scores of letters, written at that time, containing frantic appeals for relief, the writers of which have never contributed a cent to the society's support although individually invited to become members of the organization which had so signally befriended them. The name of every florist is needed to give due strength and influence to the society and every one should be willing to pay his little share of the cost of the benefits derived. Had all those who were helped on the occasion referred to shown proper appreciation by taking membership in the S. A. F. what a splendid power it would be today!

AN ECHO FROM MECHANICAL WATERING.

Editor HORTICULTURE:

Dear Sir:—To say that I am surprised at Mr. McHutchison's letter is a very poor description of my feelings after reading it. I never claimed that I had seen the device in question—I never even criticised it! I merely tried to draw the attention of readers of HORTICULTURE to the fact that mechanical watering, had been in vogue many years ago, in "the dear old land across the sea," from which the majority of the men have come who have raised horticulture in America to the high pedestal "she" occupies.

I am sorry that Mr. Finlayson's or my remarks could not "remind" Mr. McHutchison of any more vivid simile than a "dumb waiter and a modern elevator." I believe several instances could be quoted where both of these useful devices are used in the same building, said building being of the most modern construction. And right here I would like to say that I (although I have not had the pleasure of seeing Mr. W.'s device) believe "mechanical watering" backed up by the judicious use of the hose will be the "modus operandi" adopted by a majority of the larger growers in the near future. All inventors are naturally jealous of any adverse criticism of their invention, but I have yet to read or know of an invention that was perfect at the start. But when the mere stating of indisputable facts to prove that mechanical watering was going 40 years ago, prompts Mr. McHutchison to bet a large specimen of the "forbidden fruit," I trust that future criticism may be extremely mild and modified, or it will make one tremble to think what terrible indiscretions Mr. McHutchison et al. may indulge in.

CHARLES INGRAM.

LIKES MECHANICAL WATERING.
Editor HORTICULTURE:

Dear Sir:—I have noticed arguments for and against mechanical watering in your columns, and having seen the new system in operation at the Geo. Wittbold Co.'s plant, I wish to say, as a gardener, who has been in business for 45 years, that the idea has much merit and will save much labor in the greenhouse. Let us compare the idea to a sewing machine, which has done much to lessen the labors of the house wife; it will do most of the sewing; although fine needle work is still done by hand. I will equip some of my houses with the system after July 1st and shall be glad to have brother florists call and see it in operation.

WM. EDLEFSEN.

Milwaukee, Wis.

PERSONAL.

Andrew Meyer, Jr., for the past three years Superintendent of Parks, St. Louis, has been appointed City Forester, and will enter upon his duties immediately.

Miss Florence Browne Stumpp, daughter of George M. Stumpp, and Henry Mehl, Jr., were married at St. James' Church, New York City, on Wednesday, April 25.

ADIANTUM EDGARII.

We present herewith a picture of the latest addition to the list of commercial adiantums. The variety appeared among the plants in a bed of Adiantum decorum and is regarded by Mr. Edgar as undoubtedly a seed varia-

tion of that species, which it resembles in all respects excepting size which is very much larger. It is considerably larger than Adiantum Croweanum fronds measuring 36 inches in length having been produced. The photograph shows a plant eighteen months old.

CITY LIFE.

(Written for the Country Gentleman by Marie A. Drew.)

I own nothing of all I survey,

My right here all seem to dispute;
From the Harlem clear down to the bay,
There's no room for a fowl or a shoot.
Oh, city life! What are the charms
That millions can see in thy face?
Better dwell in the poorest of barns
Than live in this horrible place!

I am right in humanity's reach,

Not a foot can I journey alone,
Never hear the sweet music of speech,
(For a week I have not heard my own);
The people that rush through the streets

My form with indifference see;
The girls jostle wherever we meet,
Their boldness is shocking to me.

Fresh butter, fresh eggs and sweet cream,

Divinely bestowed upon man,
Oh, had I a flying machine,
How soon would I taste you again!
My hunger I then might assuage
With food that was healthful to eat,
And not starve at a table d'hôte
Down here on Twentieth Street.

Now, swiftly the fire-engine comes!

To rival the speed it attains
The swift little errand boy runs,
And the hospital ambulance strains!
When I think of my native land,
With its feather beds not stuffed with hair,

And its great herds of cattle not canned,
Oh, what would I give to be there!

OBITUARY.

Abraham Hostetter, of Manheim, Pa., died on April 18, aged 57 years. He was a member of the Society of American Florists.

John C. Blair, of the firm of Blair & Kaufman, Kansas City, Mo., died on April 17, aged 66 years. Mr. Blair was a member of the firm of Blair & Kaufman, nurserymen, with offices in Kansas City and nurseries in Argentine.

William Pearce, who for many years was located at Rockaway avenue and Dean street, Brooklyn, N. Y., died at his home on April 22, aged ninety years. He was a native of Hertfordshire, England. A widow, six daughters and two sons survive him.

George H. Ellwanger of the firm of Ellwanger & Barry, died at his home in Rochester, New York, after an illness lasting for several months. Mr. Ellwanger was born in Rochester fifty-eight years ago. His father was George Ellwanger who established the nursery business to which Ellwanger & Barry succeeded. He was a scholarly writer and American horticulture has been enriched by a number of books of which he was the author, the best known of which is the "Garden's Story." His brother, the late H. B. Ellwanger, was the author of "The Rose," a book which has been the American standard on this subject for many years. The death of Mr. Ellwanger is a national loss.

NEWS OF THE CLUBS AND SOCIETIES.

AMERICAN ASSOCIATION OF NURSERYMEN.

The 31st Annual Convention of the American Association of Nurserymen will be held June 13, 14, and 15, 1906, at Dallas, Texas, in the Commercial Club rooms. The Oriental Hotel will be headquarters.

The Southwestern Excursion Bureau has announced a rate of one regular standard fare plus \$2.00 for the round trip from all points in its territory to Dallas, Texas and return. Dates of sale: June 11 and 12, 1906. Final return limit: 21 days from date of sale.

Connecting lines have been advised of the action of the Southwestern Excursion Bureau and those who are representing the Association in the matter confidently expect that rates more favorable than usual will be secured. Those who expect to attend should take the matter up early with local ticket agents so that they may have ample time to get advices.

The Secretary will be pleased to furnish later information to all who request it and are unable to gain definite advice from local ticket agents.

Under date of April 25, President Albertson writes: "Am just in receipt of word from the Frisco line that they have got concessions for our Association of the privilege of going by one route and returning by another, that is, we could go down by way of the Frisco through South Missouri and North Arkansas and return by the Rock Island through Indian Territory, Oklahoma and Kansas by way of Kansas City, with stop-over privileges going and coming. And to those wanting a further extension of their ticket thirty days extension would be granted beyond the limit, thus giving a chance for any outside trips into Mexico or California or anywhere else wanted. This is on the basis of one fare plus \$2.00 from St. Louis. If our party makes up one hundred from St. Louis they will give us a special train going down and wherever there can be a sleeping car load made up the sleeper will be run right through to Dallas if arrangements are made in advance."

The program committee suggests that the Eastern contingent meet at St. Louis and be ready to leave in a body, Monday afternoon, June 11th, the Northwestern contingent to meet at Kansas City same date and all join at a proper place and the consolidated train to arrive at Dallas, Tuesday afternoon, June 12.

The Oriental Hotel will be headquarters. Rates will be \$2.50 per day and up, American plan. Members are advised to engage rooms in advance.

One session only a day will be held, from 9 A. M. to 1 P. M. The remainder of the time afternoons and evenings to be given up to recreation and business. It is intended to arrange for excursions to the orchards and other places of note in the State.

The Fruit Banquet is expected to be given probably on Thursday night. The exhibits are expected to be ar-

ranged near the Auditorium where the sessions are to be held.

Provisional Program.

June 13th, 1906, at 9 o'clock A. M.: Calling to order, President E. Albertson of Indiana; Welcome to Texas, by Stanley H. Watson, 15 minutes; Response, by Judge Lynn of Rochester, 20 minutes; Welcome to Dallas, by Hon. John A. Ewton, Pres. Hundred and Fifty Thousand Club, 20 minutes; Response, by Congressman N. W. Hale of Tennessee, 20 minutes; Welcome to the Orchards of Texas, by Roland Morrill of Morrill, Texas, 20 minutes; Response, by J. H. Hale of Connecticut, 20 minutes; President's Annual Address, by E. Albertson of Indiana, 30 minutes; Report of Standing Committees: On Transportation, 60 minutes, On Tariff, 50 minutes, On Legislation, 30 minutes; Report of secretary; Report of Treasurer; Selection of State Vice-Presidents; Meeting of Nurserymen's Mutual Protective Association at 3 p. m.

Thursday, June 14th, 1906: "Specific Requirements of New Varieties in California Fruit Growing," Prof. Wickson, Berkley, California, 40 minutes; "The Importance and Best Methods of the Bud and Scion Supply in Propagating," C. C. Mayhew, Texas, 15 minutes; On "Credits," Geo. H. Josselyn, New York, 20 minutes; Meeting of American Nurserymen's Protective Association at 3 p. m.

Friday, June 15th, 9 o'clock A. M.: "An Uniform Standard of Grading Nursery Stock, and its Adoption," C. J. Brown, N. Y.; "Ornamentals—Their Increasing Importance, Propagation, etc.," J. Wilkinson Elliott, Pittsburgh, Pa., 20 minutes; "Commercial Fertilizers for Trees," W. F. Heikes, Alabama, 20 minutes; "Storing Nursery Stock, Dampness, Temperature, Packing, etc.," Wm. Pitkin, 20 minutes; Opening the Question Box; Report of Committee on Exhibits; Report of Committee on Resolutions; Election of Officers; Selection of Next Place of Meeting.

Just what the condition of affairs would have been had it not been for the American Association of Nurserymen is food for thought.

For the benefit of those who do not appreciate the work take the record of this year. Note this extract from a letter from President Albertson:

"We call your special attention to the reduction of 15 per cent. from second-class rates on trees in boxes in the official territory, and to the changes in minimum car-load weights in Western and Southern classifications. Also that in the Western classification bales now go at actual weight in consignments of one hundred pounds, or over, regardless of sizes of individual bales.

"By these changes in classifications there will be a very large saving in the nurserymen's freight bills, and an expansion of territory that can profitably be covered by them, and a bringing closer together of buyer and seller.

"This saving in freight probably amounting to \$50,000.00, or more, per year, as there are a number of firms to each of whom the saving will be

from \$1,000.00 to \$5,000.00 per year on box shipments in the official territory alone, while in the Western a saving of 20 per cent. on all small cars, and in the Southern a saving of 20 per cent. in minimum weight on all cars—not counting the other changes that have been made.

The Secretary's address is George C. Seager, Rochester, N. Y.

FLORISTS' CLUB OF PHILADELPHIA.

A well-attended meeting of the above club was held on the 1st inst., the main attraction being a paper on "Greenhouse Construction" by Dennis T. Connor, the Philadelphia representative of the Lord & Burnham Co. A lively discussion followed the paper and much food for thought and many wrinkles of value developed. Adolph Fahrenwald, J. L. Dillon, W. K. Harris, Edward A. Stroud, Fred Hahman, Walter P. Stokes and others took part in the discussion. Mr. Fahrenwald exhibited the cups won at the rose show in Boston and was congratulated on his success. The attraction for next meeting will be a symposium on the peony, and a preliminary discussion on the Dayton meeting in August. An exhibit of Zion House cucumber came from Wm. Robertson. The proposition to raise the dues of the club was voted down. The general opinion seemed to be that the club was giving every possible inducement to the members, and that doubling the dues would have little or no effect under the conditions.

TARRYTOWN HORTICULTURAL SOCIETY.

The regular monthly meeting of the Tarrytown Horticultural Society was held Tuesday evening, April 24th, President Mooney in the chair. Williams Scott's prize carried over from the March meeting for the best flowering plant was won by John Fetherstone of Yonkers with a beautiful plant of *Cineraria stellata*; he also carried off Pres. Mooney's prize, for the best-grown foliage plant, with a well-grown plant of caladium, and received the society's certificate of merit for an improved plant of *schizanthus*. President Mooney gave a short talk on chrysanthemums, which was followed by discussion by the members. The May meeting being Ladies' night the members are requested to make as large an exhibit of cut flowers as possible. The entertainment committee are working hard to make this a success.

JAMES BALLANTYNE,
Cor. Sec.

NEW LONDON COUNTY HORTICULTURAL SOCIETY.

On Monday evening, April 24, Robert Veitch of New Haven gave an instructive and interesting address before the New London County Horticultural Society, taking for his subject "Seeds—How to Plant and Grow Them." He explained at length the different kinds of seeds ranging from the smallest, that of the orchid, to the cocoanut, the largest, and touching upon their periods of vitality, said seeds

should never be planted when the ground was dry. Plant under a depth of earth equal to the thickness of the seed, except in the case of sweet peas, which go six inches deep.

Mr. Veitch stated that all the vegetable seed sold under such a variety of nomenclature came out of the same bin and the fancy names accounted for the difference in price. He advised buying from firms that advertise largely and have a reputation to maintain, not from commission houses.

He referred to the government free distribution of seeds as petty graft and told of getting lettuce from a package of government aster seed. A fortune is waiting for the man who can produce bulbs in the United States which now have to come from Holland and Mr. Veitch predicted that British Columbia was destined to become the seed growing region of North America, although California was now doing such a large share of seed producing.

A vote of thanks was given Mr. Veitch at the end of the meeting, which closed after he had answered a number of inquiries from the audience.

PASADENA GARDENERS' ASSOCIATION.

The regular meeting of this association was held at the G. A. R. hall, Friday, April 20. J. C. Vaughan, who was present, spoke of the usefulness of the flower show, school gardening, flower carnivals, etc. The silver cups and vases were then presented to the winners of the recent spring show—in all thirteen cups and five Japanese vases, besides \$97.50 in cash. Before the close of the meeting the subject of a relief fund for the San Francisco sufferers was brought up and the association subscribed \$25; in addition there was handed in from individuals \$28.50, making a total of \$53.50. The meeting closed with refreshments and a few remarks from the visitors.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

President Kasting has appointed the following gentlemen to serve as state vice-presidents for the year 1906:—

- Alabama—Hugh Seale, Birmingham.
- California—P. Ferrari, San Francisco.
- Colorado—J. A. Valentine, Denver.
- Connecticut—G. X. Amrhy, New Haven.
- District of Columbia—Geo. C. Shaffer, Washington.
- Delaware—Chas. Simon, Jr., Wilmington.
- Florida—C. D. Mills, Jacksonville.
- Georgia—J. E. Jackson, Gainesville.
- Illinois, S.—J. F. Ammann, Edwardsville.
- Illinois, N.—Leonard Kill, Chicago.
- Indiana—Theo. A. Dorner, Lafayette.
- Iowa—Rov F. Wilcox, Council Bluffs.
- Kansas—Chas. P. Mueller, Wichita.
- Kentucky—Fred Louis Schulz, Louisville.
- Louisiana—P. A. Chopin, New Orleans.
- Maine—Albert Dirwanger, Portland.
- Maryland—William Weber, Oakland.
- Massachusetts, E.—W. N. Craig, North Easton.
- Massachusetts, W.—H. C. Schmeiske, Lenox.

Michigan, N.—Henry W. E. Goetz, Saginaw, West Side.

Michigan, S.—J. F. Sullivan, Detroit.

Minnesota—C. A. Clauson, Albert Lea.

Missouri, E.—Fred H. Meinhardt, St. Louis.

Missouri, W.—Samuel Murray, Kansas City.

Nebraska—Lewis Henderson, Omaha.

New Hampshire—Benjamin Chase, Derry.

New Jersey—John Birnie, West Hoboken.

New York, W.—Geo. W. McClure, Buffalo.

New York, E.—W. H. Siebrecht, Astoria, L. I.

North Carolina—James M. Lamb, Fayetteville.

Ohio, N.—C. J. Graham, Cleveland.

Ohio, S.—J. A. Peterson, Westwood, Cincinnati.

Oregon—James Forbes, Portland.

Pennsylvania, W.—Gustav Ludwig, Alleghany.

Pennsylvania, E.—Leo Niessen, Philadelphia.

Rhode Island—S. J. Reuter, Westerly.

South Carolina—C. A. Moss, Spartanburg.

South Dakota—E. C. Newbury, Mitchell.

Texas—Harry Donnelly, Dallas.

Virginia—Lloyd G. Blick, Norfolk.

Washington—L. B. Burkett, Tacoma Park.

West Virginia—Gustav Obermeyer, Parkersburg.

Wisconsin—W. A. Kennedy, Milwaukee.

Wisconsin—F. C. Smith, Ashland.

Ontario—J. H. Dunlop, Toronto.

Manitoba—H. E. Philpott, Winnipeg.

WM. J. STEWART, Secretary.

Department of Plant Registration.

The Conard & Jones Company, West Grove, Pa., submits for registration H. P. Rose, Charles Wagner; habit vigorous; color, bright red, closely approaching scarlet; flowers large and double, and of excellent substance; fragrant, profuse bloomer; the foliage is large, dark green, and thick. It is entirely hardy.

W. J. STEWART, Secretary.

NOTES FROM THE TWIN CITIES.

Gardening is in evidence all over Minneapolis and St. Paul, and according to indications our landscape artists are out-doing themselves in improving their work of past years. Many citizens seem to be a little impatient at the delay in the parks, but it is possible that this impatience is augmented by the stir of preparations for the National Encampment of the G. A. R. which is to be held in Minneapolis next August. There are to be several fine floral pieces in the parks in honor of the old soldiers who are coming to visit us. These pieces will be emblematic of the American flag, G. A. R. badges, and other reminders of peace and war. Nothing is too good for the "boys of '64," and we will all do our best to show them that we fully appreciate the work they did for our glorious Homeland.

I often hear your paper well spoken of hereabouts and I trust it is making satisfactory progress. I certainly appreciate my copy greatly.—A. P. H.

A VACUUM SYSTEM IN GREENHOUSE HEATING.

Read before the Detroit Florists' Club by Frank A. Simonds.

(Continued from Page 472.)

The ordinary gravity return system, as this medium has usually been installed under, is, if put in properly, a very good system as compared with the other systems mentioned. Although open to the same objection of the low setting necessary of the boiler, or a trap system for returning the water of condensation of the boiler. There is also the trouble of the coils becoming air or water bound, to the detriment of the radiating surfaces and a reduced amount of heat liberated as a result.

The steam heat usually carried in such system, being considerably above the atmospheric pressure, is often more than is necessary in moderate weather, and one of the principal objections on this account is that a coil must be full of steam, or entirely shut off, as, if an attempt is made to only partially fill the coil with steam in order to moderate the heat, that coil will gradually fill with water from the condensation remaining in it, or other water from other parts of the system backing up into it, as the pressure in that particular coil, under this condition, is less than in the balance of the system, and the water in it will not flow against the heavier pressures in the balance of the system.

While the heat can be increased to a certain point above boiling water in the gravity system according to the pressure carried, there is still a limit to this, as if carried beyond this pressure limit trouble is encountered in returning the water to the boiler.

It is, however, necessary to have a temperature of 212 degrees at least, in the heating coils under this system, in order to free the system from air which must be forced out against the atmosphere, and necessarily must have a pressure equal to it, or a little above, to do so. This temperature is often more than required, but cannot be reduced without shutting off entirely the heating medium.

One very strong point in favor of steam heat being that, in case of overheating, artificial heat is not needed, the system will cool down in a very short time after steam is shut off the coils.

From these analyses of hot water, and gravity steam, as a medium for this service, there are found to be good and bad points in each; while water can be used through a wide range of temperature and is flexible in this way to the ordinary demands of outside temperature, it is slow to respond to emergencies, whereas steam will respond quickly to urgent demands, but has no very wide range of temperature and nothing below 212 degrees, and cannot be used to heat less than full coils at a temperature of 212 degrees, showing no flexibility in that way.

A perfect system of heating, that will conform to the requirements of flexibility and demand, and one that will, on account of such features, secure practically a uniform temperature in the space to be heated, must necessarily combine the most important points of these two systems and

be free, as far as possible, of the objectionable features.

As may be learned from any steam table in a text book, water will boil or vaporize at 212 degrees at the sea level and at atmospheric pressure, and at 98 degrees in a perfect vacuum. It follows that if confined in a vacuum of any degree between these two points, water will boil, or vaporize at a corresponding temperature.

In the simple or ordinary vacuum heating systems, the steam after condensing in an ordinary radiator or coil is discharged as water from that coil through a vacuum valve that is supposed to only allow the water of condensation and the air to escape. This discharge is into a partial vacuum, as the entire return system is under this partial vacuum and is produced by a vacuum pump at the end of a return line.

As, even when heating under steam at atmospheric pressure, this water of condensation has 208 to 210 degrees when discharged through this vacuum valve into the partial vacuum, and as water at 202 degrees will vaporize under a vacuum of five inches (or 2 1-2 inches negative pressure), it follows that this water still has heat enough to allow at least a part of it to vaporize when traveling along these return pipes toward the vacuum pump; as a result, a jet of cold water is injected into this return pipe just before it reaches the pump in order to condense this re-evaporation and so allow the pump to handle it.

Now, in condensing this vapor the units of heat in it have to be destroyed by the jet of cold water, and all the benefit derived from such loss of heat is in allowing the pump to continue the vacuum by handling this vapor; advantages of the vacuum system are enough to warrant this extravagance, and with a vacuum system, it has always been considered absolutely necessary to indulge in such.

To secure a further economy in utilizing the units of heat in radiating surface, that are destroyed by the jet of water in the simple system, by conducting the water of the condensation through a secondary coil, or radiator, that contains the same partial vacuum as the return system we can utilize the heat of this vapor in giving out heat to this secondary coil; this coil acting as a surface condenser in doing the same work as the cold water under the other plan. After this re-evaporation is again condensed, it passes to the vacuum pump as solid water.

With such a system it is not necessary to carry any steam pressure on heating system, as when the weather is moderate, steam at one-half pound to one pound below atmosphere can be carried, or even lower, and a perfect circulation secured at a correspondingly lower heat. The vacuum pump always removes the air and water at any reasonable pressure below atmosphere it is desired to operate it under, so that every square inch of radiating surface is heated surface. The steam mains can be considerably smaller than for gravity steam, or for hot water. The returns are very much smaller than with either steam or water systems.

It is not necessary to carry return pipes back under ground, as they can, as well, be carried overhead. No air valves are needed.

In case of emergency, steam at any pressure up to twenty-five pounds (265 deg.) can be used and can be secured on a moment's notice, as the boiler pressure will be about that all of the time, and the pressure needed in system, regulated by a reducing valve as required; usually less than one pound pressure (212 deg.). The temperature of secondary coil is from 170 deg. to 195 deg., according to vacuum carried.

Such a system allows of controlling the heat in any or all coils, as desired, as it is not necessary to have the entire coil either entirely free of steam or completely full as, the vacuum pump keeping the coils free of air and water, the steam valve can be opened to admit only sufficient steam to heat as much or little of the coil as desired, and this will continue as long as these conditions exist.

An automatic heat regulator will give much closer and more economical results than can be possible by hand regulation. Also, being on guard all of the time, such an apparatus is always ready to take care of any conditions that may come up, and owing to the quick change secured by the steam in the radiating surfaces, an approximately uniform temperature is secured, according to the temperature the thermostat is set at, in the room.

The sun may break through the clouds fifty times a day and give sufficient heat for a few minutes' time that would result in overheat if the artificial heat was used at the same time, with an automatic regulation. However, this heat is shut off before any overheating takes place, and remains off as long as the temperature is maintained by this outside source.

To better illustrate the economy in automatic heat regulation, it is only necessary to consider that as ordinarily figures, the radiation in any building is considered ample to heat that building to a certain temperature when the outside temperature is zero, or even ten degrees below zero. And while in reality such conditions do not exist very many days and oftentimes the outside temperature is very moderate for days, during which time the entire radiation is not needed, it follows that all of the time any part of it is shut off, the demand on the boiler is reduced that much, and a corresponding decrease in coal should result.

The thermostat acts as a very reliable servant, who keeps close watch of the thermometer, and when the proper temperature is secured, immediately closes the steam valves on the coils, allowing them to remain closed until the thermometer shows the temperature to be dropping, when these valves are opened again. With these vacuum systems the boiler can be set on the ground level, or even above, if desired. Everything can be made automatic, as both pumps and dampers can be controlled mechanically, to conform to the conditions giving the best results.

THE GLADIOLUS.

Cultural Instructions and Care of the Cut Flowers.

(We are indebted to H. H. Groff, the gladiolus specialist for the following practical directions.)

The gladiolus is not exacting in its demands upon the soil. I have grown it on one block of land yearly for over fifteen years, the only fertilizer used being well-rotted stable manure and hard wood ashes applied before ploughing in the autumn. No fertilizers are needed on strong new soils as a rule.

Profuse watering at intervals is desirable where local peculiarities of soil and limited rainfall prevail during the season of active plant growth and blooming. A brief period of ripening before the latter season is beneficial, if not too severe, as this hardens the plant tissues and assures flowers and spikes of increased durability and quality. Excessively succulent growth is not beneficial to plant, flower or corm.

For best results, plant in full exposure to the sun, in locations having a free circulation of air, avoid crowding by other plants or overshadowing by trees, buildings or hedges. Plant from two to four inches deep according to the size of the corms,—matured corms never less than four inches,—two to four inches apart in double rows, which may be made as close as twelve inches in beds or borders. The greatest satisfaction is secured by growing several thousand in the vegetable garden for daily cutting as the first flowers open.

Dig the corms before the ground freezes, cut off the stalk close to the corm and store in a cool dry place, in baskets or shallow boxes. The old corm may be removed a few weeks later when convenient. It is not necessary to wait until the plant dies down before harvesting the corms, as a few weeks after blooming is sufficient to mature both for this purpose.

As our whole interest centres in the beautiful flowers of the gladiolus,—which for beauty and diversity in the whole range of color have no equals in horticulture, and their durability when cut for table and other decorative purposes is unexcelled in their season:—here, it is well to be fully informed as to the treatment that will ensure the best results.

Cut the spike when the first flower opens and place in water without overcrowding. Remove the terminal buds soon, as this checks stalk development and throws the strength into the larger and earlier maturing flowers. The end of the stalk should be shortened and the water renewed daily with frequent cleansing of the vases. In shortening the stalk cut diagonally, to insure free absorption of water by the spike without the contamination and obstruction, caused by the sediment, if cut at a right angle.

The fact that blooming the spikes in the shade of room or piazza modifies the field colors, from bright shades and tints to delicate flushes and shadings, and also reduces the latter types to the faintest tinge of color or white, is well known to experienced growers.

The advent of the new hybrids producing the most intense and deep shades of violet, purple, crimson and scarlet, as well as new yellows and

other bright colors, makes it desirable that these brilliant combinations be preserved when the spikes are cut for decorative purposes.

To ensure this most desirable result, place the vases of these highly colored types in the early morning sun for an hour or two daily, preferably after renovation and renewal of the water. This practice will also enable the retention and normal presentation of the original delicate tints and shadings referred to in the preceding paragraph, if so desired.

As it takes about three days after cutting to bring the spikes into strong blooming condition, this should be allowed for in advance of the date of intended use. The spikes can be shipped a thousand miles by standing them on end in suitable baskets or boxes. On arrival, cut off the end of the stalk, and remove the terminal buds before placing in water, they will then revive quickly and with proper care give pleasure for a week or more.

One of the causes of the popularity of the gladiolus as a decorative flower, is the fact that it has no perfume, as there are few flowers used for this purpose that are not distasteful to some one,—particularly in closed rooms—either from personal preference or painful association.

Where the pollen proves irritating to the tissues of the respiratory organs, as in the case of hay-fever subjects, the anthers may be easily pinched out during the daily renovation, when the faded florets are also removed. This removal of the anthers is desirable in the highly colored types referred to, where the shed pollen dulls the brilliancy of the petals on which it may fall.

BUSINESS CHANGES.

Boyle Bros. have purchased the establishment of Peter Boll at Malden, Mass.

Charles S. Stout has purchased the greenhouse and business of E. J. Gove, Biddeford, Me.

Frank Cramer of Stuyvesant, N. Y., has leased the greenhouses of James Purcell at Valatie, N. Y.

William C. Smith & Co. have purchased the brokerage business of Pilcher & Burrows, St. Louis, Mo., and will conduct it on the same lines as heretofore.

NEWS NOTES.

George Leadley, of 245 Woodward avenue, Detroit, Mich., lost about \$300 by a fire on April 15.

The Charles A. Shaeffer Floral Co., of Kansas City, Mo., has assigned to W. W. Filkins, a creditor.

H. D. Hemenway, formerly of the School of Horticulture, lectured in Jewell Hall, Hartford, Conn., on April 23, on "Gardens and How to Plant Them."

The sum of \$250 has been given as a trust fund for the establishment of a botanical prize at the high school, New Haven, Conn., in memory of Miss Mary A. Marshall, who was at one time a teacher in the school.

James McManus has moved from West 30th street to 42 West 28th street, New York, where he has fitted up one of the most complete wholesale flower establishments in the city. This makes seventeen wholesale florists in the 28th street group.

C. Betscher writes us that he has now the most representative collection of peonies in the world, embracing the combined lists of all the native and foreign specialists—all the species and over twelve hundred named sorts. He will make a big display at the Boston exhibition next June.

McHutchinson & Co. of New York City have again found it necessary to increase their space and have moved from Fulton street to 17 Murray street. This is the fourth time this enterprising firm have been forced to seek new quarters and each time they have doubled their space.

SEED TRADE NOTES.

By a vote of 153 to 58 the House of Representatives decided on May 1 to continue the free distribution of flower and vegetable seeds.

It was a memorable and impressive scene in the House of Representatives in Washington. The roll-call was finished and the result was announced. A member jumped on his desk and emitted a strident shout of triumph. Instantly he was joined by a hundred others, and a tumult broke forth such as no other incident of this session has called forth in the House. The members pounded their desks, cheered, stamped, clapped their hands and roared their satisfaction that the iniquitous seed trust had been foiled again, and the suffering farmers would not be cut off from their supply of congressional graft seeds. As one member put it, this is the only graft of which everybody could have a piece. It was a great day for cheap demagoguery.—Boston Herald.

The L. E. Archias Seed Co., of Carthage, Mo., went into voluntary bankruptcy on April 19. Liabilities are placed at \$12,000 or \$13,000, \$8,400 of which is owed to the banks of the city. Mr. Archias places his resources at \$15,000 or \$16,000.

W. C. Heller & Co., whose mice-proof seed cases have been such a boon for the seedsman and for the florist or gardener who use seed, announce the removal of their plant from Montclair, N. J., to Montpelier, Ohio, the change being made necessary by the increased demand for their products. They announce that they will hereafter carry a large stock of steel shelf boxes, cabinets, etc., and can fill orders the same day as received.

ARE YOU GOING... TO BUILD

I am interested in a glass factory. I want to hear from you before placing your order for glass. I think I can put you in the way of saving some money. State quantity, quality, and size wanted. Attractive figures are offered in all sizes, but for anyone who can use the smaller cuts such as 8 x 10, 10 x 12, or 10 x 15, a specially favorable opportunity is open at present on account of a surplus. Don't wait. Higher prices will prevail soon.

HORICUM

KILLS SAN JOSE SCALE

Made by HAMMOND'S SLUG SHOT WORKS. Fishkill-on-Hudson, N. Y.

SOLD BY SEED DEALERS OF AMERICA.

Glenside, Pa., March 31, 1906.

HAMMOND'S SLUG SHOT WORKS, Fishkill-on-Hudson, N. Y.

Gentlemen:—Seeing "Horcum" mentioned in Monthly Bulletin of Div. of Zoology, Penna., I would thank you to inform me where I can get a supply, say about a gallon for trial.

The San Jose Scale is very bad around this section and could no doubt push sale of the solution, especially as it is spoken of so highly in above Bulletin.

Your early reply will oblige. Yours respectfully,
P. S. Glenside is twelve miles from Philadelphia.

H. J. HINDS.

GRAFTED ROSES

KILLARNEY

and all of the leading varieties. One hundred and thirty-six thousand rose plants grafted this year. Read our list:

Grafted Stock. From 2½ Inch Pots.

KILLARNEY. \$20.00 per 100; \$150.00 per 1,000.

Richmond. \$25.00 per 100; \$200.00 per 1,000.

Rosalind Orr English. \$20.00 per 100; \$150.00 per 1,000.

Etoile De France. \$20.00 per 100.

Wellesley. \$20.00 per 100; \$150.00 per 1,000.

Liberty. \$20.00 per 100, regardless of number ordered.

The above varieties on their own roots, from 2½ inch pots, very fine plants, re-potted from 2 inch pots.

Killarney. \$10.00 per 100; \$90.00 per 1,000.

Richmond. \$15.00 per 100; \$120.00 per 1,000.

Wellesley. \$10.00 per 100; \$90.00 per 1,000.

Rosalind Orr English. \$10.00 per 100; \$90.00 per 1,000.

Maman Cochet. A magnificent pink rose of Mermet type, and the best of our out door bedders, \$15.00 per 100.

IMPATIENS HOLSTII one of the best varieties in years, being a continual blooming plant of scarlet flowers, excellent for pot culture as well as for bedding, sells on sig t. From pots, \$3.00 rooted cuttings, \$1.50 per 100. Try it, and you won't do without it.

CHRIST. WINTERICH
Defiance, O.

Some People have taken our advice as published in these columns recently and are buying **My Maryland** for trial. We reiterate here—if it succeeds with you as it does with us, it will prove the best white carnation you ever grew. Despite the variety's apparent failure in several places, we strongly advise all growers to give it a trial. We have been frank about its faults as developed in other places. We doubt if these will develop in many places.

Jessica we believe, will succeed generally and will prove to be the best red and white variegated ever disseminated. Few varieties show as strong constitution as this one does and it is a wonderful producer. Extra fine stock of both varieties ready now. R. C., \$2.50 per doz., \$12.00 per 100; \$100.00 per 1000. Pot plants, \$3.00 per 100 extra.

Send for our catalog, now ready.

SAN FRANCISCO NOTES.

'Midst the delirious excitement of this community, of which my scattered thoughts are part and parcel, I feel at a loss how to begin this report or what to say that would be in line with HORTICULTURE'S scope. It was a week ago yesterday at break of day that my comfortable home with all my worldly possessions collapsed with the earthquake from which I fortunately crawled out with several immaterial cuts and bruises. And then before composure a four days' fire ensued that could not be extinguished because the earthquake had broken the water mains of the city, the result being that the North and South divisions of San Francisco, which comprised two-thirds of the city, were wholly consumed. In these devastated divisions about all the commercial traffic of San Francisco was carried on, and more than one hundred and fifty stores conducted by cut-flower dealers and plantsmen went up in smoke. And where are these people now? Hard to find, I assure you, for confusion reigns supreme. Some, I have heard, were crushed by the earthquake, but I am not giving their names until I learn the facts. Others are stopping with growers in the adjoining county of San Mateo and on the east side of the bay, and others are getting on as best they can in the several thousand army tents erected in flower decked Golden Gate Park and the Presideo, and the green hillsides nearby. The floral business in the saved portion of the city, the Western division, has always been well attended to by these five prosperous dealers whose loss by the quake was only comparatively slight in the way of broken glass and pots: Serveau Bros., 2328 California street; R. Groves & Bro., Haight street and Masonic avenue; Clise & Jacobson, 942 Fillmore street; D. Roserie, Sacramento street and Central avenue, and the Belmont Florists (Louis Motroni & Bro.,) 2358 Fillmore street. A few hours ago I visited the Western Nursery of Charles Abraham, three blocks distant from the fire line, and the nursery of John H. Sievers & Co., only one block beyond the fire. This was undoubtedly saved by dynamiting a close by building. I found at these nurseries the offices and storehouses crowded with fire refugees, and also tents full of destitute people scattered about in the broad paths and byways. The damage to these places was not excessively severe in broken glass and pots and furrowed and cracked plant beds, but a shortage of water for plant life was sorely felt. Thousands of laborers are at work throughout the city in getting the water connections in order and within a few days it is believed all will be fairly well in this respect. Perhaps by next week, if we are providentially spared, more can be reported of the disaster that has befallen the flower trade and its devotees in San Francisco.

HORTICULTURE:—Kindly discontinue my ad. as we are about sold out of violets and carnations and at the rate chrysanthemums are going will soon be with these.

Very truly,

WM. SWAYNE.

PHILADELPHIA NOTES.

A large party of friends were on hand at the Reading Terminal on Monday to bid good bye and bon voyage to Harry Bayersdorfer who sailed May 1st on the Grosser Kurfurst on his annual European trip.

Paul Richter, manager of the Michell Seed Store leaves his present position in about two weeks to take charge of the American Horticultural Distributing Company of Martinsburg, W. Va. This change has been caused by a break down in health under the heavy and exacting strain of a rapidly growing seed business. The company which Mr. Richter goes to are manufacturers of insecticides in a large way. They have a process for arsenate of lead which is so extensively used as a remedy for the codling moth, also a scale destroyer, a weed killer, and several other valuable remedies which they manufacture on a large scale.

The surprise of the week in the wholesale flower trade was the resignation of Clarence J. Watson from his position held by him for several years as manager at Samuel S. Pennock's. Three week's ago another of Mr. Pennock's bright young men, Ralph Shrigley, left to take a position in a wholesale grocery warehouse.

Fred J. Michell has just returned from a ten days' trip to Baltimore and Washington in the interests of his firm. He reports trade and collections good and booked a number of good orders for fall delivery.

CUT FLOWER MARKET REPORTS

Quality and values seem **BOSTON** somewhat disturbed at present, due probably to the conditions of the transition period from winter to summer. Queen of Edgely and Liberty roses are exceedingly fine as seen now but Bride and Bridesmaid show the results of the winter's wear and tear in jaded-looking blossoms that flag rapidly after being exposed. Violets are running low both in quality and supply and a few warm days will finish them. Marie Louise and California are practically down and out. Campbells are still of good quality and the few Gov. Herricks seen here indicate that this variety is also a splendid spring bloomer. It will be grown quite extensively for this market next year. As to carnations the white varieties are abundant and are pretty well side-tracked. Enchantress are less abundant than they were but they are not so good and the same is true of Lawson. More or less complaint has come to the shippers, from the country trade on this account. Lily of the valley moves slowly as compared with the period since Easter. The demand is stagnated for the past two days. This flower always suffers in May; no weddings.

Favorable weather was **BUFFALO** had the past week, but business was at a standstill up to Friday. Stock poured in much faster than could be disposed of and prices ruled very low. An overstock of Harrisii and callas filled the wholesale house to its capacity. Carnations also were somewhat plentiful, but only in white, there being very little floral work in demand, and consequently a good many being carried over. The demand was better on colored stock, which held at fair prices and seemed to move more freely. Beauties of good quality are offered and moved more freely than previous week, but prices lowered considerable. Short teas and Liberties came in in enormous supply and had to be sold cheap to make room for the next day's supply. Green goods coming better than previous weeks and demand has been brisk. It is hoped that this coming week the market will be in a healthier condition.

The past week has been **COLUMBUS** another good one, all our florists having done a fine business. There has been little or no change in prices at retail, with

perhaps the exception of carnations, which have been reduced. Almost all our florists, as well as the seedsmen, handle nursery stock and plants, which together with the regular cut-flower trade has made a fast and furious business. No one has had time to do anything but work, in what has been for the past two weeks a vain effort to get our orders out on time. Trade in all lines has certainly been grand. Outside of a meeting of the bowlers of the florists' club, there has been nothing going on in that direction. This is the season of work.

Business conditions **LOUISVILLE** last week averaged satisfactory stock generally being in greater supply than demand. Carnations sell, and are in good supply, and quality. The demand for roses has been a little slow, while the supply and quality are very good. Good violets are very scarce. Lilies of the valley, lilacs, mignonette and other promiscuous stock sell up to expectations, and are in abundant supply.

Roses, roses every- **MINNEAPOLIS** where! No matter where we may turn, at the greenhouse, the wholesalers' or the retail establishment, there are roses of all kinds in abundance. The warm spring sunshine has done wonders to bring out the blooms, and as a consequence the prices are considerably lower than they have been for some time. Carnations are plentiful and sell readily. Harrisii lilies are still in demand, but callas are scarce. The calla seems to be losing its popularity year by year. Violets are gone. The ever-welcome arbutus is shipped here from Wisconsin in large quantities and is eagerly received.

Although the retail **NEW YORK** stores report a good run of trade and many social affairs calling for their help, yet from the wholesale standpoint business is lagging badly especially on the regular staples of high-class trade. The usual supplies are affected now by receipts of "frame" valley, out-door lilacs, daffodils, etc., from southern points, all of which are coming in heavily. A notification to the wholesalers from the United States Express that transportation rates from certain Jersey points have been advanced has served to add to the current worries of the wholesalers.

Market here im- **PHILADELPHIA** proved slightly over the previous week. Weddings and decorations were more numerous and used up quite some stock. Supplies came in heavily much of it showing the effects of the warm weather, especially in roses. Carnations did not suffer so much but were very plentiful. About a hundred thousand went to the street men on Saturday at very low prices. Sweet peas are plentiful and very good at present as is lily of the valley also. Violets are on their last legs. Orchids are in good demand and there seems to be stock enough—cattleyas mostly—Mossiae and Skinneri. Outside lilac is in evidence but there will be none from local sources until about the 5th inst. Wild smilax is done for the season; the new crop will commence to arrive in August. Asparagus plumosus plentiful, smilax scarce.

Advertising used to be regarded as a business accessory. It is now recognized to be as essential as the steel structure of a modern building—upon its strength every part depends.—H. M. Shaw.

A hundred other fine varieties equally cheap. Stock very fine.

SOUTHERN FLORAL NURSERY CO., Fruitdale, Ala.

THE LATEST IMPROVEMENTS IN GREENHOUSE BUILDING.

(A paper read before the Florists' Club of Philadelphia, May 1, 1906, by Dennis T. Connor).

In the past ten years there have been a great many improvements made in the construction of commercial greenhouses. The greenhouse builder is as much on the alert to add new and good features to greenhouses as the grower is to produce new varieties of roses or carnations. Perhaps the best greenhouse now erected is what is known as the iron-frame house. This house is the most durable and will last a lifetime. Lighter wood-work is used in this construction, and therefore more light is secured, less repairing, more rigid and less vibration. While the cost is more than our sash bar houses, we have quite a number of well-known florists that have adopted this style of houses, and consider them a good investment.

If florists will stop to think, in any kind of a house you erect, the cost of labor, glass, heating, and painting is the same, and often more in cheaper houses. A few dollars more for material that would be more durable is well spent. In most kinds of manufacturing plants the first and important thing to be considered is to erect substantial buildings, and use the latest improvements; this should be true in the florists' trade. There are no buildings that suffer as much as greenhouses, and they should be the very best. It is always wise and will cost you less if you take the advice of the builder. His constant association with the florist keeps him posted as to the wants of each grower and style of houses to build.

I might say that the even-span house, whether connected or separated, is the style mostly called for, from 18 to 20 feet in width and up to 500 or 600 feet long. A connected house, I think, should be from 18 to 26 feet in width, and the gutter line 6 to 7 feet above the greenhouse floor. Separated houses are built from 18 to 40 feet wide, the pitch about 32 degrees, or 7 inches to the foot; less pitch can be used in connected houses.

The question of durability is the most important thing when we plan to build greenhouses. Perhaps the latest and best improvements in this line is the combination of iron and wood used in what is known as the sash bar houses. Builders of greenhouses are constantly working out the very best details for this purpose. Cast-

A TESTIMONIAL

THE MINERALIZED RUBBER CO., NEW YORK CITY.

GLENS FALLS, N. Y., Apr. 25th, 1906.

GENTLEMEN:—Three years ago I bought of you 100 ft. of your Anchor Greenhouse Hose, and it has
been in constant use ever since, being dragged around our four greenhouses and we have a water pressure
of 90 to 100 lbs.

Enclosed please find check for 100 ft. more.

Yours truly
(signed) **A. J. BINLEY.**

Compare this man's experience with your own. Better send for a sample of this hose.

iron gutters and iron posts are mostly
used and have come to stay. The eave
line, the weakest and most important
point about greenhouses, is taken care
of with the use of cast-iron gutters
and galvanized iron eave-plates. In
the iron and wood-work construction
we get greater strength and more dura-
bility and less shade, and this style
costs very little more than all-wood
houses.

In the use of iron about greenhouses:
Cast iron should always be used when
set in the ground. Cast iron is so
close to the natural element that it is
almost indestructible, and I would
say, always use cast iron in the
ground and at the ground line.
Wrought iron when used should be
kept well painted or galvanized.
Trussed houses, as planned by the firm
that I am with, are something new.
Houses of this style have been heard
of and been in use fifty years or more
ago. A great many improvements
have been made and special details
worked out for this kind of construc-

tion, all of which I believe are prac-
tical. One good feature about the
trussed houses is that we don't have
any columns in the way, except when
the houses are 30 feet or over in
width; then it is best to use columns.
Much lighter material is used in this
construction, making as little shade as
possible

(To be Continued.)

WE HAVE TOLD YOU

about the cast iron foot piece and angle iron post,—now once more on the galvanized angle iron eave plate and what it does. First, the sash bar clasp is secured directly to it, causing a dry, non-rotting joint. Second, it gives tremendous strength to the house at just the point strength is needed. Third, it keeps itself ice free. Fourth, it won't rust.

It's easy enough to know a house's weak points, but it's another thing to make the weak points strong—that's our strong point.

Three Sterling Carnation Novelties

Winsor, White Enchantress, and Helen M. Could

There is nothing about any of these varieties that we wish to conceal; therefore, we cordially invite all carnation growers to pay us a visit. Come at any time.

WINSOR—Winner of Lawson Silver Medal.

This is sure to prove a winner. Nothing approaches it in color, which is a clear silvery pink—a shade between Enchantress and Mrs. Thos. W. Lawson—and much more beautiful than either. In fact, it is just the shade that we have all been trying to get. The color will make it sell in any market. The stem is just right. The flowers are considerably larger than Lawson and much better shaped. As a grower it has everything that can be desired. So far we have not seen any large-flowering variety quite so free as Winsor.

WHITE ENCHANTRESS.

A pure white sport of Enchantress, at once the most popular and most profitable carnation grown today, on account of its size and stem and freedom with which it blooms. White Enchantress is identical in every respect but color. Those desiring quality as well as quantity will find it in White Enchantress.

HELEN M. COULD.

This is a beautiful variegated sport of Enchantress. The ground color is a lovely shade of clear pink, the variegation carmine, making an exquisite combination of colors, besides being something distinctly new. At a short distance the variegation does not show at all, the general effect being a beautiful shade of dark pink. Growth, habit, size, and stem are the same as Enchantress.

We have fine stocks, from which we can deliver healthy cuttings of Variegated Lawson, White Lawson, Red Lawson, Enchantress, Mrs. M. A. Patten, Lady Bountiful, etc.

Our Variegated Lawson is all that we claimed for it last season, and is giving the fullest satisfaction everywhere—the best in the variegated class. Come and inspect our stock of new and standard sorts

F. R. PIERSON CO.,

TARRYTOWN - ON - HUDSON, NEW YORK.

LAST CALL FOR CARNATION PLANTS

	per 100	per 1000
4000 strong selected Robert Craig from pots,	\$12 00	\$100

CHRIST. WINTERICH

Defiance, O.

Some People have taken our advice as published in

these columns re-ent-ly and are buying for trial. We reiterate here—it if it succeeds with you as it does with us, it will prove the best white carnation you ever grew. Despite the variety's apparent failure in several places, we strongly advise all growers to give it a trial. We have been frank about its faults as developed in other places. We doubt if these will develop in many places.

Jessica we believe, will succeed generally, and will prove to be the best red and white variegated ever disseminated. Few varieties show as strong constitution as this one does, and it is a wonderful producer. Extra fine stock of both varieties ready now. R. C., \$2.50 per doz., \$12.00 per 100; \$100.00 per 1000. Pot plants, \$3.00 per 100 extra.

Send for our catalog, now ready.

About Abnormal Ferns

Athyrium filix-foemina. Branching forms.

Athyrium filix-foemina. Pinnae of crested forms.

The production of abnormal forms in ferns is a passion with many fern growers, and no wonder, for it is not only a very captivating work to raise new forms, but sometimes is quite remunerative as witness the new forms of Boston ferns which are bringing considerable money, I think, also the crested pterises, which are liked more than the type, and so on.

The question is, how do these abnormal forms in ferns originate? After one of these forms is found in any species the barriers seem to be broken and it is easy to get other forms from that one. Boston fern was cultivated a long time as Boston fern without any change in its fronds, but since Pierson appeared no one can foresee the end of the new forms that will evolve from time to time.

These abnormal forms are found not only in green-houses but also in the wild state and in some countries more numerous than in others. In the British Islands there have been found more abnormal forms in ferns than in all Europe and the United States together; the reason why can not be explained.

Another peculiarity which can not be explained is that in Japan many of the plants growing there have been found with variegated leaves while very few are found here or elsewhere. Some abnormal forms may originate from spores but there are in ferns different kinds of growth on the fronds or on the roots which young plants grow and I am of the opinion that most of these odd forms come from those growths as in other plants where shoots appear with changed foliage or differently colored flowers and one proof of this is that in propagating by spores abnormal ferns found in a wild state they have a tendency to go back to normal forms and it is only by selection and in the second or third generation from spore seeding that constant forms are obtained. There are a few of the newer Boston ferns raised from spores already in existence and from these will be developed in time a set of constant forms. I take Boston fern for an example because it is the fern of the moment. There is no rule about reproducing abnormal wild-found ferns; some reproduce themselves with but little reversion to normal while others

Athyrium filix-foemina. Lamulate and cruciate forms.

Athyrium filix-foemina. Showing change of tissue.
N. Pinnae normal.

give mainly normal plants with occasional altered ones and it is only, as aforesaid, that by selection and after a few generations that constant plants can be obtained and among these, even, will be found a few better ones and some that are worthless. Greenhouse ferns have not been worked much in that direction but in the hardy section great results have been secured.

Abnormality or monstrosity in ferns is a change in the form of the tissue in the nervations of the frond: in normal plants and in the first case the nervations which feed the sori are all alike throughout the entire length of the frond and when not sterile are not liable to change much by spore seeding. In some plumose forms are found the marks of the sori but there are no spores there. M. Drurey, in his excellent fern book gives a comprehensive account of this peculiar growth, called apospores.

In the second case the abnormality generally affects the top of the fronds, pinnae, or pinnules, and when not dwarfed to a crested bunch or the pinnae along the stem reduced to a rudimentary state the middle or lower parts of the fronds are normal as far as nervation is concerned. Where the frond is affected the nervation is in the form of a net work more or less branched in all directions and the spore dots (sori) are fewer and irregularly set while in that part of the frond not affected they are more numerous, normally set and of normal form; therefore, the spores taken from the normal part of an affected frond will give, by seeding a much larger proportion of normal plants that will be got from spores taken from the affected parts where the nervations begin to branch, and upward from this point will be given a great many abnormal plants, and the few normal ones included may be the result of spores blown over the whole plant from the normal portions. The spores taken from the whole frond thus affected, in *Athyrium fil. foem.* especially, will grow so many normal plants that they will kill the abnormal ones which are always weaker—unless they are destroyed as soon as they can be recognized. These facts apply mostly to hardy ferns—*Athyrium*, *Scelopendrium*, some *Polystichum* and *Polypodium* which are most liable to change. In *Nephrodiums* abnormalities are nearly all reproduced identically from spores taken from all parts of the frond and normal plants are seldom found among seedlings. They are also very difficult to cross.

Accepted theories have been combatted of late and heredity has been spoken of, but until more certain facts bearing upon the case have been obtained no definite conclusion can be made; animal life is not vegetable life; especially is the dissimilarity in ferns, where each little spore is an individual. Raising abnormal forms of ferns from spores is like most other things—you cannot expect much success right off. Every fern grower knows that disappointments and deceptions follow one after the other and trying and trying again are necessary before any results are reached, and a curious fact is that after working for some time in that direction the surrounding world has become seemingly saturated

with the tendency to abnormality and abnormal ferns will grow everywhere you put some spores.

In the raising of new forms in ferns chance has much to do, but there are some natural laws one has to recognize.

1. A normal fern will, with very few exceptions, reproduce itself identically.

2. Two or more species from a same genus seeded together reproduce the same species mixed together with sometimes—but not as a rule—hybrids. The fecundation in ferns is such a minute thing that you cannot depend on it.

3. A single abnormal frond found on a plant—usually a forked frond—does not reproduce itself.

4. An abnormal fern found in nature which has all its fronds altered in the same way gives, by seeding, more or less abnormal plants resembling the parent, with many normal ones. Sometimes they give new forms.

5. The selected altered ferns from that product give more than fifty per cent. altered ones, with some that are better. After that they reproduce themselves nearly identically through selected spores.

6. Two abnormal, wild forms, of the same species seeded together will give about one-half normal plants; the other half will resemble the parents, with a few other forms.

7. A few of these new forms seeded together give many other new forms, with a less proportion of normal plants. These new plants show great sensibility to variation and the result of seeding them together is scarcely two plants alike in the progeny, the number of normal ones, if the spores have been well selected, being very small. These observations have been made with the hardy ferns before mentioned and it is shown that most of these abnormal hybrids will be constant forms.

A few words about hybridizing ferns may not be out of place here. Everybody who handles ferns is supposed to know that when a fern spore finds itself in a suitable place it develops in a number of cells and takes a heart-shaped form called prothallium, which adheres to the ground by little hair-roots. On the under surface of the prothallus are situated the reproductive organs: male antheridium containing the antherozoids, the reproductive agent, and the archegonium, the female organ containing the embryo seed. If through the dew moisture of the under surface of the prothallus the movable fibratile little antherozoids are carried to the opening of the archegonia, when they enter fecundation takes place. Now, to hybridize ferns it is necessary that the antherozoids from one prothallus, the growth of a spore from one fern, finds its way to the archegonia of another prothallus which has grown from a spore of another fern. These organs being so extremely minute cannot be handled like the pollen of a flower and therefore hybridization in ferns is always a very uncertain possibility.

The female organs being situated within the indentation of the heart-shaped or top part of the prothallus

and the male ones among the root hairs of the lower part, the prothallus can be cut horizontally in two with a very thin, sharp knife and the upper part of one planted close to the lower part of another so that the cuts touch; this graft—so to speak—has to be made before complete development of the prothallus. This is the most certain way to some tangible result, but is very tedious work. A more practical way and one that is much used is to seed together the spores of two or three different ferns one desires to cross—not too thickly, but thick enough so that the prothallus when grown overlap one another; experience will indicate when the time is near for fecundation. Then at intervals of a few days for a week or two submerge for one quarter of an hour the seed pans with the surface of the soil all green with the prothallus, in a pail of warm water, shaking it slowly to assist the little antherozoids to move around, and if one or more find their way to another archegonia than the one to which they naturally belong, then hybridization has occurred and a new fern will be the result.

Am. Duthaus

Calathea (Maranta) zebrina

(See Frontispiece)

This genus furnishes the arrowroot of commerce and is therefore useful as well as ornamental. The species of this note is one of the oldest and most familiar denizens of our store-greenhouses. It is an inhabitant of tropical America, in which region most of the genus finds their abode. While not the gem amongst its fellows, from a purely beautiful and picturesque standpoint, it is withal one of the most imposing foliaged species when well done, and is the most easily grown under any and all circumstances, having the stoutest constitution of any of the species, maintaining a respectable appearance in lower temperatures and under adverse conditions. It makes a capital lawn-plant in a shaded and sheltered position, but this mode of culture is not conducive to exhibition plants.

Marantas like high and moist temperatures; a good shade is also essential, especially in the summer and autumn seasons. Syringing the foliage in the growing season is beneficial, but this can be easily overdone with marantas, even if they like—figuratively speaking—somewhat moist feet. As the blade of the leaves of many of them are comparatively large, frequent heavy syringings in other than skilled hands is likely to be more detrimental than otherwise, as the water thrown against the leaves is largely conducted down the stems into the sheath and finally to the potting material which naturally tends to conditions the reverse of healthy. As they possess soft and stout roots, the potting material should be porous in character. Fibrous loam chopped up lumpy, with a liberal proportion of good leaf-mould, semi-decayed, with sand and charcoal nodules in plenty, constitutes a good potting medium. In order to maintain them in good order, annual repotting in fresh soil, other things being equal, is an important factor.

H. D. Ingleton

Marica Northiana

The subject of the above illustration is not by any means a new plant, being introduced from Brazil as early as 1789; still it will be new to a good many readers of HORTICULTURE for the plant is seldom seen in cultivation outside of Botanical Gardens.

It is a member of the Iris family as can be seen at once by looking at the flowers shown in the photograph. The picture represents a plant in a 5-inch pot and it would make a fine plant for the dwelling house. Unfortunately the beautiful flowers are very short lived, lasting but one day. However, they will keep on developing new flowers for some time at intervals of from one to five or six days; each scape producing from three to five more flowers. Their flowering season is March, but where they are grown in any quantity the season of flowering is much longer, as some plants will start to flower as early as the middle of February while others will wait until the latter part of April. The flowers, although short lived, are beautiful, and for color would set many an orchid in the background. The outer segments of the perianth are of the purest white, at the base elegantly mottled or striped with chestnut-brown on a greenish-yellow ground; the inner segments are neatly curved, the upper part barred with deep blue on a white ground; the lower part veined with white and brown. The stamens are united, pure white with light green pollen masses. The flower measures three inches

across and contrasts very effectively with the deep green glossy leaves and flower scapes. These latter resemble the leaves very much only through the center can be seen the proper flower stem in the shape of a swollen midrib. The accompanying picture shows this plain, also the way the flowers proceed from the side near the top of the scape. At the same place and time as the flowers come out young plants will push forth, which affords a ready means of propagation as they will root as soon as they come in contact with the soil or sand on which the plant happens to stand. After flowering the scapes will droop down and then these young plants will soon establish themselves. If it is not desired to propagate from them, the young plants on the old flower scapes can be left on, the plant stood on an inverted flowerpot so as to keep the young growths from rooting, and the following winter both young and old plants will flower and it looks quite novel.

As to culture very little need be said, for the plant succeeds under all temperatures above freezing and below boiling, in any old soil, preferring a heavy loam, in shade or full sun; stick them away in any corner or along a walk where other plants would refuse to grow, these plants will thrive there. For the dwelling house no other plant will keep in better condition for so long a time and under poor management. They will take a lot of water if well drained and they can stand a good long drought without being injured. The flower scapes can be cut and will last a long time in the house, developing flowers and young plants almost as good as they would in the plant. The leaves possess the same good keeping qualities and can be used to good advantage with other cut flowers.

British Horticulture

A TULIP SPECIALIST

Amongst the most enthusiastic supporters of the National Tulip Society is Mr. A. D. Hall, M. A., who is at the head of the Rothamsted Experimental Station. For over ten years Mr. Hall has been cultivating tulips, and during that time has raised a number of seedlings. Exclusive of the latter, Mr. Hall grows about 150 varieties. He is most enthusiastic as to the culture of the florists' section. He considers that the English tulip is comparatively easy to grow, because it is not very particular either as to soil or climate. It stands the smoky atmosphere of the great manufacturing centres. Speaking of his own experience as a grower, Mr. Hall states: "I have dabbled in a good many flowers, but I think that none gets more good of you year by year than the tulip. The interest in the old florists' flowers is unquestionably reviving—witness the auricula and primula—and no doubt the tulip will have its turn. Even

if bulbs have to be purchased the price is not high. Another recommendation to the amateur is that the amount of space required for growing tulips is very small." Mr. Hall's flowers are seen at their best at the end of May. When they are in their bud stage, to keep off the rain a case is erected over them, composed of waxed calico, which forms an awning and is nearly transparent. Asked whether the interest in showing tulips was increasing, Mr. Hall replied: "We had a better southern show last year than we have ever had. The first is generally at the Royal Horticultural Society's hall the third week in May, but this year it will be at Botanic Society's show in Regent's Park. The intermediate show will be at Wakefield, and the third at Manchester, both in May."

A NATIONAL FLORAL EMBLEM

Market florists sent forward a good supply of red and white roses in anticipation of a big demand on St. George's Day. The result was somewhat disappointing, and some of the growers found that there was no increase in the ordinary demand. The St. George's Society has endeavored to secure the observance of this national festival by the wearing of red and white roses, but the movement makes but slow progress. One South London tradesman sought to gain a little publicity by presenting all his lady customers with a posy of roses on April 23rd. The florists would very much like to see this celebration taken up with more enthusiasm. They instance what has been done with the carnation as an emblematical flower in the United States. In this country the trade receives but little aid from national events. Even on ceremonial occasions when a touch of color is added to the London streets the garish and flimsy adornment of paper flowers are usually selected. The great flower-wearing day is on April 19th, when the primrose is worn in memory of the late Lord Beaconsfield. These flowers are extensively obtained from the woods and hedge-rows a few miles out of London by hawkers, so that here again the trade reaps but little advantage, beyond supplying a few wreaths for placing at the foot of the deceased statesman's statue. From time to time there have been suggestions for founding an orchid league amongst the admirers of Mr. Chamberlain. The cost of this aristocratic bloom has evidently stood in the way of the project being successful. The primrose has the merit of being thoroughly democratic. For a penny one is able to secure a good-sized bunch.

W. H. Adsett.

Horticulture's trump cards: Originality, forcefulness, superior reading matter, no muzzle, friends everywhere.

Improved types of *Cineraria grandiflora*

The evolution of modern florists' flowers has in no case been more strongly marked than in the cineraria family. The small-flowered senecio was the original prototype and from this we have a graduated advance up to the latest, star-shaped cactus forms. The cineraria enjoyed a wider popularity in the last decade than now; the inexorable law of "the survival of the fittest" placed it in the rear in an unprecedented era of novelties. The advent of the stellata type, so free and useful for cutting, and the latest acquisitions of Messrs. Sutton of England are tending to a revival with these one-time favorite plants. The objections of straggling foliage—requiring so much valuable room in winter—also a general uniformity of color, purples predominating, have been removed by the introduction of plants of close, compact habit, with beautiful shades of pink and pure white flowers, many with cactus form and quilled petals; they are now in every way worth the attention of the commercial florist and private gardener. These new types are of very floriferous character as may be seen from the illustration, every axil down to the base contributing its cluster, in many cases completely hiding the foliage. If the plants are kept in cool airy quarters flowers may be had from Christmas to May: the centre cluster usually fading first another may be drawn into the vacant place and the whole plant will look perfect again.

Seed may be sown the 2nd week in July; when large enough to handle prick off into boxes or pans, then later into 3-inch pots, keeping them going in not less than 60 degrees at night, also keeping them well up to the light. They will need a shift into 5-inch pots in September using ordinary soil, not too rich, at this stage and in November they may be transferred into 7-inch pots for flowering, using a mixture of good turfy loam, leaf mould, a little dried cow dung and sand, with a good sprinkling of rough bones. A good plan is to put a layer of rough bones over the crocks, the roots finding this in mellowed condition at the important period when the flower buds are forming. Incidentally, this method

of late feeding might well be applied with advantage to all soft wooded plants of this character; if too rich soil is given in the early stages, the wood-fibres ripen too quickly, thus running into flower before a good substantial growth has been secured. The indiscriminate use of fertilizers is responsible for many failures with what is naturally easily-grown stock.

Cinerarias to be done well should have a house to themselves. Cool, airy quarters with a temperature of not less than 40 degrees at night will ensure dwarf steady growth. They should be kept well up to the light and turned around weekly, keeping a sharp look-out for aphids; a good plan where outside conditions permit is to have bottom ventilators put in near the pipes, leaving them open night and day, even with a few degrees of frost, balancing matters by keeping heat well on at night and checking in the morning, thus maintaining always a fresh buoyant atmosphere, so absolutely necessary for cinerarias and all plants of like character, if dwarf, sturdy, growth is to be secured during the winter months.

Edgar Elvine

Pseudo-bulbless *Oncidium*s

These interesting and easily cultivated plants, generally considered scarcely worthy of cultivation, require only to be better known to receive the recognition they deserve. They are mostly natives of Central and South America, have thick, leathery foliage, which it may easily be supposed, performs all the functions of pseudo-bulbs. The flowers are borne on long branching panicles sometimes four and five feet long.

The most popular of this class of *Oncidium* is *O. Cavendishianum*, and a well-flowered plant of this species is a sight to be remembered. The species is variable but the flowers are generally yellow with rich brown spots on the sepals and petals; the lip is bright yellow. The size, color, fragrance and texture of the flowers, combined with their keeping qualities, make this a valuable horticultural species.

O. luridum is also a vigorous and useful species, but the flowers have not the texture of *Cavendishianum* and are more transitory.

O. bicallosum, *O. Lanceanum* and *O. Carthaginense* are each worthy of a place. The latter has small, obsolete pseudo-bulbs but has the thick fleshy leaves of the class. They all enjoy a warm, very moist atmosphere, and should be grown in baskets in pure fern-root as they are very free-rooting and resent anything approaching stagnation in the rooting medium. In a hot, moist house they will make enormous quantities of aerial roots without which the plants are seldom luxuriant.

They are all sensitive to strong sunlight and should have shade nearly all the year.

field for all

A correspondent writes in approval of our policy of giving full liberty for the expression of opinion in our columns.

We do not always agree with the views expressed by those who write for us, but all are welcome so long as they discuss things and policies and operations rather than individuals and so long as it is done in manly way over one's own name. In the case of trade journalism, in which the family character is so inherent, the arguments against the use of assumed names are many and those in favor very few. We have always agreed with the late Peter Henderson, who frequently expressed strong views on this point, holding that if a man was afraid or ashamed to sign his name in full to a communication he would better not publish it at all.

Get ready
for Dayton

Only a brief space of three months now separates us from the S. A. F. convention at Dayton, Ohio, the leading horticultural event of the year. It is not too soon to begin active individual and concerted work to the end that a large attendance may be assured and the greatest pleasure and profit derived. Club officials, committees, State vice-presidents, and others interested in organizing parties to travel together to the convention or otherwise promoting its success are free to use the columns of HORTICULTURE for such announcements and notices as they choose to make at any time and we shall give them prompt dissemination. Dayton is very centrally located and had every qualification needed in a convention city. The normal convention attendance is a foregone conclusion but it is possible to increase this largely by early effort. So "get busy."

Bedding plant
prospects

A revival in the demand for bedding plants is noted in many places. We are glad it is so. There are innumerable spots which nothing else can fill so well,—little spots all through the crowded city where nothing would ever be planted were it not for the enticing baskets of assorted geraniums, salvias, heliotropes and pansies, which awaken the dormant fondness for a bit of blooming garden. There is no garden so small or so large in which this class of

plants has not an appropriate place and their use, by the gardener blessed with good judgment and correct taste, will not interfere with but rather assist and supplement in a pleasing manner the hardy herbaceous and shrub plantings which in recent years have taken the place of the garish, unsatisfying displays of bedding plants once so prevalent. The past decade has seen many real improvements among this class of plants in the way of more compact habit, greater variety of color, larger flowers and other points of excellence and it is very gratifying to see that these new and improved sorts are being grown and offered generally by the large advertising growers. We hope their enterprise will be amply rewarded with big business and remunerative results.

Concerning
the dissemination
of wholesale prices

Trade prices, where and how they should be published, or whether they should be published under any circumstances, have long been and are likely to continue to be a fruitful subject for critical discussion in certain quarters. There is no known method whereby the limit of distribution of printed matter can be controlled or any authority exercised as to whose eye it shall not reach. The publisher of a journal in which wholesale prices are quoted can and generally does endeavor to place some reasonable limit on its circulation, but the destiny of each copy, after it has left his hands, is beyond any further control on his part. We contend that it is to the wholesale dealer and advertiser that the retail dealer should look for protection against the selling of goods to retail consumers at trade prices. The whole matter will easily adjust itself in all horticultural lines when the wholesale dealer adopts the plan of demanding from every applicant a business card of other satisfactory evidence that he is in the trade and entitled to trade prices before consenting to have any dealings with him. This is the method pursued in other lines of trade of any extent commercially and, when lived up to, covers the ground fully.

Fighting
the moths

It now becomes evident that, despite the myriads of moth nests and eggs that have been destroyed through public and private effort in eastern Massachusetts and neighboring states during the past three months, the campaign will have accomplished little more than the saving of a great many trees that would otherwise have been ruined. That the number of moths to be fought next winter will be appreciably less than has been the case this season or that any reduction of the extent of territory infested will have been effected can hardly be expected for there are vast numbers of the pests that have not been reached,—extensive wood lands on which the cost of extermination would far exceed the actual value of the land and for which any appropriation the state could make would be entirely inadequate. Extermination of either brown-tail or gypsy moths is no longer dreamed of by anyone who realizes the situation and it would seem inevitable that unless some natural foe of the moths should interpose, the scourge will in time over-run the entire eastern section of the country. We urge upon those of our readers who have not already done so that they send to Superintendent A. H. Kirkland, Boston, for such documents as may enable them to recognize the insects and detect their presence early, and giving information as to the best methods for combatting them.

UNCLE JOHN ON MECHANICAL WATERING.

Editor HORTICULTURE:

Dear Sir:—If the interest in "Mechanical Watering" continues, HORTICULTURE will have to set apart a department under that head where the pros and cons may have full sway. To me, the Wittbold system of mechanical watering (I am not sure whether this is the best title for it) possesses so much merit and appeals so directly to progressive horticultural work, that it must undoubtedly be appreciated. Somehow or other, some of the gentlemen seemingly believe that the "system" has not one tittle of desirability in its make-up, which is assuredly wrong, as if to-day the hose shall be condemned as being in its general use, detrimental to the best culture. The man who uses the water can, the man who uses the syringe (the revolver of water arms), the man who uses the hose, has to mix the water he uses with brains, or he cannot be successful. The man with the mechanical watering apparatus must also mix brains with this system.

Watering cans, syringes and hose will be necessary implements, in good culture even where mechanical watering is used.

In the Wittbold establishment the system is installed in a series of houses (where palms of various sizes, ferns of various sizes, rubbers and miscellaneous plants—coleuses, begonias, geraniums and other bedding plants) all of which are well grown and in fine condition. There is a difference in each of these houses in the manner the water is distributed; in some the water is distributed over the general surface, in others it is distributed so as to completely wash the under surfaces of the plants—again, only the pots are watered. In one house where nephrolepis are grown in hanging baskets suspended from the roof, the system is so arranged for the perfect watering of these ferns that, if nothing else had been attempted, this alone is worth all the work and thought Louis Wittbold has put in it. The manipulation of the actual watering must in itself recommend it as a saver of time and of labor. The first cost is not more than the cost of rubber hose would, be for at most three years. Its uses will be so numerous as it gets known that they will be greatly appreciated in many ways not now thought of.

In conclusion permit me to say that I am sure the many readers of HORTICULTURE greatly appreciate that a subject so important as watering (whether mechanical or hosey or otherwise) has been given so much space in its columns. Not forgetting, that brains must be mixed with water, however applied (whether it be by McGorum, McHutchison, Finlayson, Wittbold, or "any other man") to obtain the best results.

Very truly yours,

JOHN THORPE.

OUTDOOR ROSES AND MECHANICAL WATERING.

To be reasonably sure of getting good roses outdoors the plants have to be carefully attended to from now on. They require to be kept clean and growing vigorously. Dust the plants early and often with hellebore powder, and by and by if the soil gets dry it will pay to water thoroughly. If watering is done in the late afternoon or evening let the water flow at the base of the plants. I sometimes think this much-talked-of mechanical watering apparatus might be just the thing for this and other purposes, arguments of certain worthy men notwithstanding. In time it may be called irrigation in close quarters, and who knows but what irrigation has already accomplished for the arid lands of the West, this new-fangled mechanical watering business may also do for the enlarged horticultural establishments of the West and East. Don't condemn anything until by a just trial you have been convinced that condemnation is deserved, because it may be possible that a just and fair trial may reveal the fact that what would have been said in condemnation would be unjust in more ways than one.

D. MCINTOSH.

THE SEEDSMEN'S STANDPOINT.

Editor HORTICULTURE:

Dear Sir:—You have doubtless noticed in the press dispatches and the Congressional Record the harsh and unwarranted charges against the Agricultural Press of the country, made by the friends of "Free-Seeds" during the debate on the Agricultural Appropriation bill. Angered by the contemptuous criticism of this graft by the press as a whole, its friends charged that the press opposed it not from principle but because it was controlled by the seed merchants through their advertising—an infamous insult which should be resented.

The Senate Committee on Agriculture has granted a hearing on "free seeds" to be held shortly, at which some of the prominent seed merchants will explain why they are opposed to the government interfering with their business by giving away products which they sell. If you are sufficiently interested, will you drop a line to Senator Redfield Proctor, Chairman of the Committee on Agriculture, stating that you are opposed to the distribution on principle and not because of any influence of advertisers. Or, if you prefer it, I would be pleased to present to the committee at the hearing, anything you may send me on the subject. For your information I may say that the seedsmen are not opposed to a distribution of new, rare and valuable seeds within the meaning of the original act, but they object to the indiscriminate distribution of turnip, radish, corn, beans, peas, spinach and other of the commonest kinds of garden seeds simply that a Congressman can make a showing with his constituents.

Trusting to have your cooperation in this undertaking, I am,

Yours very truly,

WILLIAM WOLFF SMITH.

Washington Representative, Wholesale Seedsmen's League.

WHOLESOME CHESTNUTS.

Bedding out will from now on take up a considerable part of the gardeners' attention. Geraniums that have been sufficiently hardened may be planted out in many locations in a week or ten days, but tender things, such as alternanthera, coleus, heliotrope, etc., are safer where protection is available up to the first of June.

If alternanthera persists in damping off in the greenhouse water only when absolutely necessary, and then in the forenoon; avoid sprinkling. Water thoroughly when required at the root as much as possible. Alternanthera will not color up well when growing rank; for that reason shallow flats are preferable, and even when the plants are in hot-beds it will be found advantageous to lift them two or three weeks before planting and put them into flats or small pots.

Herbaceous borders should now receive attention in the way of regulating and keeping clean; each kind should stand distinct and any other kind encroaching should be dug out sufficiently to allow each plant or clump to show up. The parts dug up for this purpose can be utilized in filling blank spaces where deaths have occurred.

Hollyhocks and all tall growing plants should be staked in time and the sooner this is done the less objectionable the stakes will appear later on.

Some people take great care to have the ground for vegetables thoroughly manured, but when it comes to the flower beds and borders they seem to think that for them little if any manure or fertilizer is needed. This is for obvious reasons a serious mistake; ground planted year after year with flowering plants gets exhausted unless something is added to counteract the action of the roots on the soil. Impoverished soil is in many cases the cause of scraggy plants with but few blooms, often seen towards the end of the season.

Get dahlias hardened before planting; this of course refers to potted plants from cuttings or division. Dahlia roots are better in the open ground now than anywhere else. Don't plant them too closely; leave room between the rows to be able to walk and work comfortably. Put stakes in for each plant at planting time, and have labels handy to tack on the stakes.

Rock gardens are very pretty and are sources of much delight and enjoyment. At this season every plant should be carefully gone over and freed from weeds. Look out that ferns are not smothered by either weeds or plants. A certain amount of carelessness in appearance perhaps adds to the beauty of a rock garden, but weeds are nothing but a menace even then.

HORTICULTURE:—Please cut out my advs. in your paper as all my stock is sold out. Send me the bill. Yours truly, S. A. PINKSTONE.

NEWS OF THE CLUBS AND SOCIETIES.

MASSACHUSETTS HORTICULTURAL SOCIETY.

The May exhibition at Horticultural Hall, Boston, on Saturday afternoon, fifth inst., brought out some superb exhibits of calceolarias and fancy pelargoniums from that invincible grower, James Stuart, gardener for George F. Fabyan of Brookline. The varieties represented in the pelargonium collection were the following: Bridegroom, Mrs. Ashley, Nellie Hayes, Miss Henderson, Lady Duff, Mabel, Alice Love, Duke of Portland, Mme. Thibaut, May Queen, Purity and H. M. Stanley, a list comprising a remarkable variety of colors. Two plants of Calceolaria Golden Gem, each four feet across, from Dr. C. G. Weld, gardener W. C. Rust, also came in for great admiration. The long tables were loaded with spring flowers including a splendid variety of Alpines from the Botanic Garden, tulips in wide assortment from several exhibitors, a great collection of narcissi from Longwater Gardens, gardener W. W. Craig, which received a silver medal; pansies, and other cut bloom. A cultural certificate was awarded to W. N. Craig for fine Liliun candidum, eight to twelve flowers on a spike.

NEW JERSEY FLORICULTURAL SOCIETY.

John E. Lager on Orchids was the attraction at the monthly meeting on May 4. The lecture was amply illustrated with flowers from Lager and Hurrell and the Julius Roehrs Co., and the private collections of Henry Graves and William Barr, many of which had never been outside their glass houses before.

Two *Medinella magnifica* requiring special carrying facilities were brought from the Colgates and John Crosby Brown, flowered by William Reid and Peter Duff, and the usual array of American Beauty, fine carnations, antirrhinums, calceolarias, gladioli, from skilled hands. Collections of vegetables from Mrs. William Pierson, Chas. Ashmead, gardener, and Chas. Hathaway, Max Schneyder, gardener.

An engrossed and illuminated copy of resolutions were presented to Malcolm MacRorie treasurer of the society for many years in recognition of services rendered, feelingly responded to by the recipient. Louis Piker was elected to membership and a committee appointed to co-operate in the societies' part in the forthcoming floral parade, June 15.

J. B. DAVIS.

LENOX HORTICULTURAL SOCIETY.

The regular meeting of the Lenox Horticultural Society was held Saturday, May 5, President S. Carlquist in the chair. This society held an institute with the Housatonic Agricultural

Society and their president, F. W. Heath, introduced Dr. B. L. Hartwell of the Rhode Island Experiment Station, who gave a very instructive lecture on "How Plants Grow." He explained from large charts the chemical structure of the leaves, stems and roots of plants, also many of the chemical experiments that are being made at Kingston, R. I.

A committee was appointed to draw up resolutions of condolence, to be sent to the wife of our esteemed and former active member, the late Wm. Woods.

GEO. FOULSHAM, Secretary.

NEW YORK FLORISTS' CLUB.

On account of the inability of Mr. Pettigrew to be present next Monday, the evening will be devoted to the members, who are requested to bring up discussions as to what would be the best thing to do to advance the interests of the club, and to take some action regarding the increased express rates on cut flowers.

The annual outing is scheduled to take place on July 2, at Witzel's Point View Grove, Long Island. The program is now well under way in the hands of a very efficient committee.

AMERICAN CARNATION SOCIETY.

The following varieties have been registered:

"Winsome." By John Reimels. Woodhaven, N. Y. Scott shade of pink and about the same growth as Scott when it was first introduced. It blooms freely and the flowers measure from three to three and one-half inches.

"Pink Imperial." By John E. Haines, Bethlehem, Pa. Pure pink of immense size and unusual long stems all season through. A strong grower and free bloomer.

"Abundance." By Rudolph Fischer. Great Neck, L. I. A pure white of fair size and an unusually free bloomer.

"Crimson Glow." By Dailedouze Bros., Flatbush, N. Y. A glowing crimson of medium size, perfectly stiff stem, an excellent calyx, of good healthy habit and a free and continuous bloomer.

"Avalanche." By Robert C. Pye, Nyack, N. Y. Pure white flower three and one-half inches in diameter on a stiff wiry stem twenty inches in length. Habit resembling Lawson, its seed parent, but without the short stems of that variety.

ALBERT M. HERR, Secretary.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Department of Plant Registration.

Duncan Finlayson, Jamaica Plain, Mass., submits for registration *Dendrobium nobile* Mrs. Larz Anderson. Flowers, nearly four inches across; extra fine form; sepals and petals pure white the extreme apex of each being slightly colored with pale amethyst; labellum pure white; disc of darkest maroon purple.

WM. J. STEWART, Secretary.

PITTSBURG AND ALLEGHANY FLORISTS' AND GARDENERS' CLUB.

The meeting of the Club on Tuesday, May 1st, was well attended considering the season, for as the warm days of late spring and early summer draw on the attendance is always less than in the winter months. One new member was elected, and a number who were in arrears for their club dues for two years, and had made no favorable response to reminders, were dropped from membership, it not being the policy of the Club to carry dead timber.

Bedding plants and Palms, was the topic assigned for this meeting, and H. L. Blind & Bros. of West View, led off with a large assortment of bedding plants, of which some fine double tuberous-rooted begonias and cannas drew the most attention. It was brought out that the Henderson was the best seller among the cannas, but that the purely foliage varieties such as Black Beauty did not take well.

Mr. H. C. Burchler, for the Valley Greenhouses, Sewickley, showed a very attractively staged collection of thrifty stock, the vincas and fuchsias being especially noticeable.

S. J. Hatch, for D. M. Clemson, also showed bedding plants in variety, good stock.

Jno. Bader of Troy Hill, from his large collection of palms and tropical plants showed a few specimens of pandanus, dracenas, variegated box elder and palms in variety.

The chief feature of the exhibit of Schenley Park Greenhouses was the exceedingly fine calceolarias. Every one was a specimen fit for a prize.

The subject for the June meeting is Paeonies and other outdoor flowers. This promises to be a very interesting meeting as one of the largest paeony specialists in the country will make an exhibition.

H. P. JOSLIN.

CLUB AND SOCIETY NOTES.

At the meeting of the New Haven horticultural society held on May 1 a committee was appointed to consider the expediency of having a rose show in June. Plans for the big show in September was also discussed. President R. D. Pryde presided. F. C. Thompson of West Haven read a paper on pansies and exhibited a large collection of rare and beautiful specimens.

The Massachusetts Highway Association held its spring field-day at Boston on Tuesday, May 8. It took four tally-hos to carry the party through the park system, Charlesbank, the Charles River dam, now in course of construction, Back Bay Fens, Franklin Park and Franklin Field being visited under escort of Mr. Pettigrew and Mr. Shea. Lunch was served at Franklin Field. The various features of the boulevards and parks were inspected with much interest.

On every tongue—Horticulture's remarkable success.

SAN FRANCISCO NOTES.

Lack of money wherewith to rebuild San Francisco is not in evidence. Although our losses are gigantic, the resources available are still more gigantic. It is probable that Government aid in this direction will not be needed, for the financial interests that are now exploring this field from their standpoint calculate that the money received from insurance companies (provided that all pay their losses), estimated at about \$165,000,000, with the street railroad reconstruction, city bonds of 1904 still available, etc., will in themselves aggregate some \$207,000,000 in round numbers. In addition the regular commercial income of the port, domestic and foreign, will amount to a vast sum. Furthermore, Eastern syndicates with huge cash resources are already being projected for investment in the New San Francisco. One alone of these syndicates is said to have already \$100,000,000 ready for investment here. This will probably be applied in the form of secured loans to property owners, corporate and individual. Then there are thousands of capitalists all over the country who will be attracted to this inviting field for good interest-paying investments. Last, but by no means least, San Francisco itself, always a city of great cash resources, will rebuild largely with its own already existing capital, and indeed this capital is even now turning into the new work without any reference whatever to what outside capital is or is not going to do. Therefore we are thoroughly optimistic and believe not only in the speedy return of the all-around excellent ante-calamity normal conditions we enjoyed, but that the landscape gardeners will soon have plenty to do at remunerative prices, and the flower and plant growers who are daily bringing in wagon-loads of stock and freely distributing it to the inmates of scores of tented hospitals, and thousands of destitute tent-covered fire refugees, will ere long re-

This is a new hybrid cattleya recently bloomed at the greenhouses of C. G. Roebling, J. Goodier gardener.

cover the domestic trade that formerly made them well-to-do.

William Kettlewell, the chief landscape gardener and propagator of fancy bloom for the extensive Pope estate at the Burlingame suburb of San Francisco, drove into the un-

The parents are *Cattleya intermedia* and *Cattleya Mendelli Morganiae*.

burned section of the city this week just in the nick of time to delight Claude H. Smith, a wealthy citizen of Ithaca, N. Y., who had just arrived. He is one of the principal proprietary members of the Smith Premier Typewriter Company of Ithaca. He was engaged to be married next month to Miss Bessie Wilson, a San Francisco belle, whose brown-stone mansion was reduced to ruins by the great fire. After receiving no answer to repeated telegrams of inquiry he hastened to this city, and after seven days of diligent searching he found his destitute sweetheart and her parents in an army tent on the Presidio grounds near the Golden Gate, and an arrangement to have the June wedding take place immediately was consummated. Mr. Smith is an up-to-date man and wanted flowers for his wedding. He searched for them in vain one day this week among the few florists left in the unburned district. Next morning early he was at the earthquake-damaged store of Serveau Bros., when the Kettlewell wagon drove up loaded with American Beauties, teas and violets and not a few orchids. When Mr. Clark's full desire became known the entire wagonload was turned over to Serveau Bros., who immediately transported the supply to the wedding tent and decorated it extravagantly for the afternoon wedding, and at 6 o'clock the happy couple boarded a train for Ithaca.

HOUSE OF PHALAENOPSIS

At Mrs. B. B. Tuttle's, Naugatuck, Conn.

ABANDONED FARMS AND THEIR CAPABILITIES.

Abstract of an address given before the Massachusetts Horticultural Society by Prof. W. M. Munson, Orono, Me.:

One of the first reasons for the abandoned farms in New England is the inherent restlessness of the American boy. That this innate restlessness should take active form, however, was the result of changed conditions. The conditions and problems presented to the New England farmer of today are very different from those of even half a century ago.

The early farmers of New England worked hard, lived simply and had few debts, but also few of the comforts of life as we understand them at present. A race of sturdy, efficient men and women was the result; men and women who have made their mark wherever they have gone, in the gradual settlement and development of the country.

Many farms of the East have been literally carved from the hillsides, and the labor incident to the management of such farms is great. As a result, even during the first half of the last century, many of the best young men were attracted away from the old homes to the newly developed Northwest territories. With improved transportation facilities, which developed rapidly after about 1850, bringing eastern farms into direct competition with the cheap and fertile lands of New York, Ohio and Michigan, and soon with the black prairie lands of Illinois, Minnesota and the Red River, lands which could be had almost free of cost, the values of all agricultural lands in the East fell. The New England farmer found himself, with depleted soil and rigorous climate, growing wheat and corn which had to compete in the open market with similar products from the rich lands already mentioned. He found his sons leaving the old home and joining the ranks of the factory hands, or moving West to grow up with the country, and swelling the ranks of those with whom he must compete.

Instead of meeting the problems mentioned in the forceful, intelligent way we should expect from the sons of New England, the farmer of the East lost his grip and his spirit. He sought other professions, and "abandoned" and neglected farms became common.

A very important factor in the accumulation of abandoned farms is that of injudicious management. The old notion that "anybody could be a farmer" has been the cause of the undoing of a vast number of farms, as well as a much larger number of farmers. So-called "worn out" lands may

be the result of several distinct conditions; namely, they may lack humus, either from too much or from too little cultivation; they may lack plant food; they may have become acid; they may need draining; they may need tilling.

Having ascertained the reason for the condition existing in a given instance, the application of specific remedies is not a difficult problem. Deficiency in plant food may be met by the use of concentrated fertilizers. Lack of humus, one of the most common troubles, may be corrected by the use of green manure—as clover—in those cases where stable manure is not available. In cases of acidity of the soil, when leguminous crops cannot be grown for the supply of humus, an application of lime at the rate of from one to two tons per acre will accomplish wonders. The application of wood ashes, which contain thirty or forty per cent. of lime, with varying amounts of potash and phosphoric acid, are also frequently used with remarkable results.

The younger generation can scarcely realize that fruit growing is still in its infancy in New England, and that in this direction is the most hopeful outlook for the future of New England agriculture. From the earliest settlements on the Massachusetts coast till the present day, fruit has been grown in New England. Plums, peaches, pears and apples galore have been introduced from England, France and Belgium. Until about fifty years ago, however, there was very little of the fruit we know today; and that little was produced largely in the gardens of a few enthusiastic lovers of fruit. Apples were then produced from natural seedlings, growing without care or attention, and were of more importance for cider than for any other purpose. Pears of delicious quality were grown, but mostly on a small scale for home use or home markets.

But now all this is changed. We are beginning to recognize the fact that a large part of New England, rough though it be, and difficult of manipulation for the ordinary farm operations, is well adapted to the production of fruits of the highest color and finest quality. We are beginning to realize that with moderate annual expenditure for labor and plant food, we may reap a rich and sure return, and that right at our doors are the best markets in the world for a commodity which we can produce as readily as we can make shoes, cotton cloth or wooden nutmegs.

Over much of the area of New England apple trees are growing almost spontaneously; and wherever, in the past, seeds may have been scattered, we may find trees growing. These old trees, though neglected and broken by

storms, usually produce some fruit every year and are frequently loaded to the ground. When given half the chance of ordinary farm crops these same old trees, regrafted to varieties of recognized merit, become the most valuable assets of the farm. In this connection I have in mind an old orchard in Southern Maine, set more than eighty years ago and naturally somewhat decrepit now. In three successive years recently, this orchard, covering about two and one-half acres, yielded 650, 400 and 350 bushels respectively; which brought the owner \$480, \$300 and \$350, or an estimated net profit to the owner of seventy-five per cent. These old moss-covered, neglected veterans, hardy as maples and refusing to die, stand as living witnesses to the possibilities of New England's hillsides. Nor is the testimony confined to these old veterans. Very many modern instances of men who have accumulated a competence from old rocky pastures by the aid of the apple tree might be cited.

Phineas Whittier, Maine's "apple king," began his labors as a fruit grower about 1850 with the purchase of ninety acres of most unpromising rocky pasture and woodland for the sum of \$400, of which he was only able to pay \$75 down. Apple trees were set wherever a place could be found among the rocks, and today there are substantial buildings, including fruit cellars and evaporating house, and the annual returns from the orchard, which now covers nearly a thousand acres, are from \$3000 to \$6000.

Only a few weeks ago, in conversation with the owner of an "abandoned farm" in Maine, the following interesting facts were brought out. The owner, a resident of Waterford, Oxford County, was a young married man and wished to branch out somewhat in his farming operations. In 1886 an abandoned farm of 136 acres one and a half miles from home was bought for \$650. This is what is known as a hill farm, and apple seedlings grew almost spontaneously. At the time of purchase there was a thick growth of natural apple seedlings over the abandoned fields. Some of these had been top worked, and that year yielded twenty barrels of fruit. The same year the owner set three hundred trees and began grafting the other seedlings. Such wood and timber as there was on the place was sold on the stump at \$4.00 per thousand, instead of spending time and labor in clearing.

During the first three years the young orchard was cultivated and planted to corn, the old trees being in pasture, but there was an annual application of 8 to 15 pounds per tree of fertilizer, made up of 200 pounds nitrate of soda, 600 pounds muriate of potash and 600 pounds ground bone.

As indicating the earliness of fruiting, one of the top grafted trees, the third year from grafting, produced three barrels of Baldwins, and the fifth year five barrels. The tenth year (1896) there were sold from the place 275 barrels of Baldwins at \$1 per barrel, mostly from the top worked trees, of which there were about three hundred. In 1900 and 1904 the net returns from this small orchard on one of Maine's abandoned farms was nearly \$500. In 1905 the net returns were \$700, and the orchard is not yet at its best bearing

A BEDDING PLANT EMPORIUM.
Establishment of Ludvig Mosbaek.

age. In 1886 this gentleman in question was in debt \$1500. In twenty years he had raised a sturdy family, paid every debt and about \$1000 in doctor's bills, built a stable, a storage house and repaired other buildings, and has a snug bank account, substantially increased by the past year's returns. Best of all his boy is an enthusiastic helper and will follow in his father's footsteps.

The case cited is not an isolated one. There are hundreds of farms in Maine, and no doubt in other sections of New England as well, that would give even better returns on a similar investment. Last year a farm of fifty-seven acres, on which is a thrifty Baldwin orchard of 150 trees, was placed upon the market at \$1000. This same farm has repeatedly returned \$500 from the trees alone. The rest of the farm has been in hay until it is one of the "worn out" farms, but the buyer of such property is sure of liberal interest.

I have not referred to the brilliant successes of Terrill and Kinney of Vermont, Ricker of Maine, Solon Chase, whose record with "them steers" is familiar to many; nor to any larger operators like Hale of Connecticut, and others of Massachusetts, who have shown the possibilities of fruit growing. Suffice it to say there are hundreds of small orchards throughout New England which during the past ten years have averaged their owner a net profit of 15 to 40 per cent. on the investment.

In view of the recognized value of the orchard crop it is indeed surprising that orchard land in close proximity to railroad and steamboat points should be held so low. It is more surprising that there are not numerous syndicates for the exploitation of these orchard lands. There is not the slightest doubt that with proper management the owner of apple orchards in New England is surer of a liberal return on his investment than is the owner of orange groves in Florida or of silver mines in the West.

Some of the best orchard lands in Maine may be bought for from \$5 to \$50 per acre; and I know of hundreds of acres within one hundred miles of Portland that might rival the great orchards of the Ozarks.

The orchards already in bearing are sold at surprisingly low figures. But there is every indication that the tide has turned and that the fruit interests of the East are to receive a measure of the attention which their importance demands.

I would not minimize the difficulties attending fruit growing. Mice and countless hordes of insects and fungus enemies demand that the fruit grower be ever on the alert. But there is no business occupation which will permit a man to "sit and sing himself away to everlasting bliss." The successful orchardist must wage eternal warfare, just as is the case with any other successful business man.

A few years ago the secretary of the Maine State Pomological Society outlined a scheme for forming a fruit growers' stock company which, while it seemed altogether feasible, has not, so far as I am aware, been carried out in New England; though similar organizations are successful elsewhere. In the West and South companies have purchased land, planted trees on a large scale, sold capital stock, and declared satisfactory dividends. What has been done there can be done in New England.

There are few, if any, absolutely safe investments that will appreciate in value as rapidly as a New England orchard. Excellent fruit land may be purchased almost anywhere in New England for \$10 to \$50 an acre. If set with desirable sorts of apples and given intelligent treatment these same lands will at the end of ten years be worth at a low estimate \$100 an acre; while in fifteen years they will be returning a handsome dividend on a valuation of from \$300 to \$800 an acre.

Seed Importers and Growers

1018 Market St., Philadelphia, Pa.

The increasing value of the orchard from year to year, up to twenty-five years of age, is an important factor in the problem. To be sure the orchard must be cared for and protected during the first ten years; but this is not by any means a dead load to carry. Many of the lands which may be included in the tracts purchased already contain profitable bearing orchards. Small fruits or sweet corn, potatoes or other hoed crops, may be grown in the young orchard to meet the expense of cultivation and fertilization. "Fillers" of Wealthy or some other early maturing sort, which will come into bearing in five years, will pay the expense of the orchard before the main trees reach their prime.

An investment of this nature will certainly stand investigation at the hands of conservative capitalists.

While I firmly believe in the future of New England as an apple producing region, there are many other ways in which the abandoned farms may be utilized to advantage. The reclaiming of "poverty flats," and similar unpromising areas in other sections of Massachusetts, has shown the capabilities of some of the lands as market gardens.

The unqualified success which attends the intelligent management of dairy herds in all parts of New England; the almost unlimited demands for the superior sweet corn which is grown in Maine and elsewhere; the success attending the extensive operation of Professor Sanborn of New Hampshire, in the line of general farming; the rapid advance in the production of potatoes since the introduction of improved methods; all of these and many more actual commercial operations, go to show the possibilities in the direction of a new agriculture for New England.

McMINNVILLE, TENN., R. F. D. 2

ANNOUNCEMENT

Some fourteen years ago I began the growing of carnations, and especially of seedlings, more as a pleasant occupation from which I derived considerable recreation and relief from business cares and worries. In a few years the results attained in my work proved so encouraging that I began the introduction of such new varieties as proved commercially successful and had received the approval of the retail florists of New York City.

This was done in the belief that the dissemination of the best results of my labors among the craft would prove beneficial and profitable to our carnation brethren. During the past two years I have become aware that more or less loss has been incurred by many in the trade who have purchased new varieties, either of others or of my own origination, and I have been subject to more or less unjust criticism from certain quarters.

While I have been unusually careful about keeping records, as well as conservative in the descriptions of the varieties sent out, I am convinced that no amount of care on my part will insure a certain proportion of growers to successfully cultivate the new varieties which I might introduce, and as the introduction of new sorts has always been done at a monetary sacrifice, I have decided to cease the active production of carnation plants and cuttings for sale as well as the introduction of new varieties, and from this onward the resources of the Cottage Gardens Carnation Department will be devoted to growing carnations exclusively for cut blooms.

I desire to take this opportunity to express my extreme gratitude to those who have shown a friendly interest in my work, and who have contributed to what little success I have attained by cheering me onward with words of genuine appreciation, and to assure those friendly spirits, who are above carping criticism, that so long as I continue to labor for the advancement of the divine flower, they will still be welcomed to the Cottage Gardens as they have been in the past.

Queens, L. I., April 24, 1906.

CHAS. W. WARD.

THE PAGOSCOPE.

(Translated by G. Bleicken.)

This is a device to register frost in the critical spring-time. The apparatus is invented by M. N. Bernel-Bourette, 36 rue de Poitou, Paris; the price is 20 fr. (\$5.) It has been tested and is recommended by several experiment stations and horticultural societies in France. The apparatus comprises two thermometers, fixed upon a zinc-plate frame, the lower portion of which contains a little reservoir, to be filled with water, not calcareous, however (rain or boiling water perhaps best); a cotton wick draws the water to a muslin envelope surrounding the base of the right hand thermometer.

About half an hour or so after sundown, we read the degree of temperature, indicated by the right-hand wetted thermometer, and place the end of a moveable arrow upon the corresponding figure on a plate on the top of the apparatus.

Now we read the left hand thermometer, follow up the figure obtained on a horizontal extending line clear across to the right hand thermometer, and notice the point where this line crosses the arrow, set, as stated above, to correspond with the right hand thermometer.

The field between the two thermometers is divided into three zones, red, yellow, green, which zones are not, however, equal. If the noted crossing occurs in the red field, danger of frost in the night and the following morning is certain, while should it cross the green field no danger exists; but should the crossing finally occur in the yellow field the case is doubtful either way. — *Revue Horticole*.

My motto is still the same. Your money back if not entirely satisfied.

CHARLES H. TOTTY
MADISON, N. J.

NEWS NOTES.

George Ostertag has been appointed superintendent of parks in St. Louis, Mo., to succeed Andrew Meyer, who takes the position of city forester.

John Driscoll and Ernest Read have bought the greenhouses of Thomas King in Fall River, Mass., and will make a specialty of raising cucumbers and tomatoes.

The buildings of the Sagadahoc Agricultural and Horticultural Society at Topsham, Me., were threatened with destruction by a forest fire on May 1, but the valiant efforts of the townspeople who started back fires checked the flames in time.

The Cox Seed Co., of San Francisco, Cal., whose offices and warehouses in Sansome street were destroyed by the late disaster, announce that they will resume busi-

ness at once with a warehouse at Oakland and temporary offices at 108 Cole street, San Francisco.

ARE YOU GOING . . TO BUILD

I am interested in a glass factory. I want to hear from you before placing your order for glass. I think I can put you in the way of saving some money. State quantity, quality, and size wanted. Attractive figures are offered in all sizes; but for anyone who can use the smaller cuts such as 8 x 10, 10 x 12, or 10 x 15, a specially favorable opportunity is open at present on account of a surplus. Don't wait. Higher prices will prevail soon.

Not in the Trust

ADDRESS

George C. Watson

164 Ludlow Street

PHILADELPHIA - - PENN.

Remember this factory is NOT in the TRUST and has a free foot.

PHILADELPHIA NOTES.

W. J. Baker has been having trouble with the Adams Express Company and went to court on Monday to have his wrongs righted. We trust he may be successful. It is pretty hard to get justice from big corporations with their unlimited funds for expensive legal talent.

A spasm of uneasiness was caused by the editorial in HORTICULTURE last week over the threatened increase in express rates. All hands sincerely hope that the fight is not to be fought over again.

A crying grievance of the trade here of late has been the abuse of credits. Perhaps in no other line of business is the system of credits so loose and unscientific as in the flower trade of this locality, and some reform is urgently needed. A meeting of the heads of a number of interested firms was held on the 3rd inst. for the purpose of forming a credit association. After a free discussion it was decided to leave the matter in the hands of a committee to formulate a workable system and report to a future meeting. George C. Thompson the new manager of the Michell Store entered on his duties on the 7th inst. Mr. Thompson is a native of Scotland and graduated after five years from the seed and nursery establishment of Benjamin Reid & Co. of Aberdeen. While still a young man, he has had twenty years of first-class experience and will undoubtedly fill his new position with success.

Director Potter of the Department of Public Safety ordered the fakirs off Market street on Friday last. They had become so numerous on this crowded thoroughfare as to be a serious obstruction to traffic. The order does not affect the other streets but it has had an appreciable bearing on the present glutted condition of the market.

Dr. John W. Harshberger delivered a lecture on "Phyto-geography of the Rocky Mountains" to the members of the Botanical Society of Pennsylvania on the 5th inst. The other speakers were Dr. A. F. Knout, "Hepaticas," and Dr. H. E. Wetherill, "Panama plant notes."

Trollius laxus (the Globe Flower) and *myosotis* are a conspicuous feature in made-up baskets and window decorations at present.

For outside covering of window boxes nothing seems to take better than cedar bark. S. S. Pennock appears to be the only one able to supply this important item. Try Sam.

Rupert Kienle of 17th street has a good idea. He carefully clips out and pastes into a big scrapbook all the good pictures of floral designs and decorations appearing in the trade papers. He has been doing it for a long time and now has a collection most useful to him and costing next to nothing. This wrinkle is worth dollars to all subscribers who may never have thought of it.

A SLIPPERY ACCOUNT.

In the case of D. T. McCarthy & Sons against the H. S. Taylor Nursery Company, of Rochester, Justice Lambert shortly before the opening of

court Monday, April 24 directed a verdict for the defendant of no cause of action on motion of the defendant's attorney.

This is one of the peculiar cases arising under our present business incorporation law. Two Taylor brothers had for years conducted a nursery at or near Rochester under the name and style of H. S. Taylor & Co. In 1893 they with one J. Frank Norris organized a corporation by name The H. S. Taylor Nursery Company. It was undisputed that one of the Taylors came to the plaintiffs and bought trees, stating that Norris was a member of the concern, but signing the contract H. S. Taylor & Co. The plaintiffs claimed that they supposed that the name was still H. S. Taylor & Co., with Norris an addition to the company. Failing to get their pay they looked up the matter and found that Norris was not a member of the firm, but was a member of the corporation. They therefore sued the corporation, and it defended on the ground that the sale was made to the brothers Taylor as a firm and not to the incorporated company. The Taylor brothers owned all of the interest in the company or co-partnership and sixty per cent. of the incorporation. The court upheld the contention that the action had been brought against the wrong concern.

It is hard for the layman to understand the fine distinctions sometimes taken advantage of to avoid liability. Such cases, however, serve as a caution to dealers to be careful when dealing with corporations not to take the value of the letterhead as an indication of the financial prosperity of the concern. McCarthy & Sons had the trees and now they have them not. Taylors as company or corporation have had the trees and the benefits thereof, but the law decided that the company only should pay for them.—Lockport Daily Journal.

CUT FLOWER MARKET REPORTS

BOSTON There is practically no change in business conditions this week. The inactivity prevalent since Easter is still in evidence. All kinds of stocks is abundant and the street men are a main reliance in unloading it. Roses are of excellent quality—worth more than the price they bring. Enchantment leads in value among the carnations, bringing fifty cents more per hundred than the average run but all move slowly, for the quantity offered is far in excess of the quantity wanted.

COLUMBUS A very satisfactory week in all lines has just closed. Everybody has been on the jump. Our florists have had a very fine run of orders, for besides the regular cut flower counter trade, flowers in many forms have been in large demand for graduating exercises of colleges and schools. Prices have softened somewhat during the week, but with outdoor flowers beginning to come, we expect it. As I told you last week our florists are very much surprised and pleased at the fine business being done since Easter. Our seedsmen and nurserymen have been doing a glorious business; every line of goods has sold and in large quantities. Outside of practice bowling by the bowling club, there has been nothing doing at the Florists' Club. The weather has been splendid for trade. All conditions most satisfactory.

DETROIT With the weather keeping bright and balmy the effect on business is quite noticeable. There seemed to be very little doing the past week in the larger class while some of the smaller weddings are being cared for each day. The wholesalers are not troubled with an over supply, the past week finding them more to the opposite. Carnations especially have been called for, with the supply exhausted. Sweet peas have been selling out very regularly due to the passing of violets. Lily of the valley does not seem to over supply the demand, it being quite brisk of late.

Lilies are plentiful and being used to good advantage. Roses are about the only stock in excess at the wholesale houses, there being lots of good stock. Hyacinths have almost disappeared. Blooming plants are selling briskly. Geraniums are being discussed by several florists here with a view to arranging better prices for this thrifty little plant.

INDIANAPOLIS The cut flower business which has been passably fair for some time took a serious drop with the coming of the month of May. Flowers of all descriptions are plentiful but notwithstanding this prices have kept up remarkably well. The quality of roses and carnations continues good. Bulbous stock and violets are a thing of the past for this season. Out door lilacs are in and sell cheaply. Judging from the amount of bedding stock carried by the majority of the growers they must be expecting the biggest trade in years. It is not considered safe to do any planting in this locality before the 15th of May hence nothing has been done so far in that line.

LOUISVILLE Business conditions the past week were very good on the average. Carnations are coming in in good quantities with the quality satisfactory and the demand steady. The same can be said of roses. Lily of the valley and sweet peas still continue popular. Mignonette sells slowly; lilies sell well but there is an over-abundance. There is no lack of other stock.

MINNEAPOLIS Business was a little slow last week but has started in at a merry clip this week. Seed merchants are working fast and furiously, for Minneapolis seeds are well-known the world over. The wholesale florists report good trade in roses and carnations with a little miscellaneous stock. Green goods disappear as soon as they arrive in the market. Several special sales on carnations cleaned out the surplus stock, and swelled the contents of the cash

register quite perceptibly. Several very pretty weddings and receptions have added considerably to the fame of some of our best decorators.

NEWS NOTES.

John A. Bopp, Cumberland, Md., opened a retail flower store at 46 Centre street, the first of May.

The greenhouses of Edward J. Hill of Ansonia, Conn., were struck by a cyclone on April 26. The roof and part of the end of the house were carried some distance away. Damage, about \$400.

Ottocar Jellinek, employed as gardener on the estate of Henry Wirth, Longmeadow, Mass., committed suicide by shooting himself through the heart on May 4. No reason for the act is known. He was about 28 years of age.

During the brief absence of the clerk from the office of S. A. McCullough, 98 St. Paul St., Brookline, Mass., the cash drawer was robbed of its contents, amounting to quite a sum. Later three men who had been seen about the premises were arrested.

The mayflower season at Cape Cod is at its height, and it is said the flowers are more abundant than in many previous years. The season is very short and the pickers devote themselves assiduously to their task, finding a ready market in Boston and New York. It is a custom of these Cape towns to allow the school children a half holiday in which to gather the flowers, and scores of boxes are forwarded to distant relatives and friends.

THE LATEST IMPROVEMENTS IN GREENHOUSE BUILDING.

A paper read before the Florists' Club of Philadelphia, May 1, 1906, by
 Dennis T. Connor.

(Continued from page 602.)

I don't have to tell you that cypress is the best and only wood to use about a greenhouse, and I would like to impress on the florist that the word "cypress" don't mean that you get the best wood. We find several kinds of cypress on the market, and the selection of this should be left to experienced and reliable greenhouse builders. The cypress should always be air dried and free from sap.

One of the most important things about greenhouse building is the use of good putty. Secure your stock where you know it is made of pure linseed oil and the best whitening. I meet every day florists that use good material in building their houses, and use a poor grade of putty, the "Marble Dust Brand" often mixed with white lead; this makes the cost of your putty greater, and then you have poor material. I was surprised the other day to meet a man who told me that tons of putty is made at the beef packing establishments in the West. We all know that putty made of beef fat will not take hold of wood. No doubt some of this brand finds its way under greenhouse glass. If you secure good putty you do not have to mix white lead with it.

It is well known that white lead and pure linseed oil is the proper paint to use for all woodwork. Another good point in greenhouse construction is the glazing nail. We have a number of kinds to select from, and nearly every florist believes one to be better than the other. I believe the zinc shoe nail is the only nail to use to hold your glass down; you will find it will take a good hold in the wood and stay with you.

A few words about glass for greenhouses. Second-quality glass is what is used mostly, and occasionally we find some one that use single thick. In case of a hail storm there will be less breakage where double thick is used. I would advise florists to use double thick glass. I believe glass should be spaced sixteen inches in width; we find this makes a less stronger house, and there is less breakage.

The arrangements of benches is generally left to the florist. These are planned to suit the kind of stock grown; they should be placed so that the walks come along the sides of the houses. You get a better circulation of the air, and the houses will last much longer. The cypress material is best for the bottoms of benches; while the cost is greater, it will outlast any other kind of wood, and will be cheaper in the end.

Concrete made of ashes, sand, and cement is now generally used to make solid beds. I believe in the next ten years concrete will be an important factor in the building of greenhouse foundations.

The ventilation of houses is an open question with the florist. Some want continuous lines on both sides, and others with top sash and spaces between. We have had very little call for side ventilation on commercial

WHY PAY \$1.50

every time you want your Lawn Mower sharpened? The little dingus we advertise herewith will do it in five minutes and better than any machine shop. We've tried it ourselves and know what we are talking about. A child can do it. Entirely new

and away ahead of any similar device on the market. Has eight cutting surfaces that can be used in succession. Made of the highest grade crucible steel. Will last a life-time. Try it.

Just One Minute

That's how long it will take you to water or syringe a greenhouse with a

WITTBOLD WATERING SYSTEM

It will save you 90 per cent. of your watering labor.

IF YOU ARE SKEPTICAL

read the following letters of recommendation or, better still, send for

A Swivel Wheel \$2.00 and Six Half-inch Nozzles at 50c Each.

An investment of **\$5.00** and put up a hundred feet and give it a trial. If used only as an auxiliary to your regular watering it will be **the best investment you ever made.**

Chamberlain & Bunker, Fremont Mich., write:—"The mechanical spraying is a decided success. We expect to equip our whole plant of 100,000 feet of glass with your system as fast as we can get to it."

Davis Bros., Morrison, Ill., write:—"Some time ago we put in one hundred feet of your watering system on trial and find it has given perfect satisfaction. Please send us five hundred feet more as soon as possible, and when we can get to it we want eighteen hundred feet more to fit out our other houses. We think the system a very good thing and consider the labor saved by it will pay for the apparatus in one season."

This from Kuhn's Nurseries, Arlington Heights, Ill.:—"Your watering system which we ordered as an experiment and with which we equipped one of our rose houses is doing the work to our entire satisfaction, and we have decided to equip five more houses with your system. You may send us at your earliest convenience 1000 feet ready to put up."

"We wish to state that your system of watering is certainly a success and when better known will be universally used. The time saved in labor will pay for the system in a short time."

Stephen Hyde, Carthage, Mo.:—"In regard to your watering system, I think it a

fine thing. I have raised one crop of lettuce and did not use the hose once. It waters a space about twenty feet wide and the way we put it in the cost is not very much. I used black pipe and cannot see but it is as good as galvanized. This is the last winter I shall use a hose. Will pipe all my place before another winter. Will have 45,000 feet all in let no., so you see the water problem is a serious one with me. My houses are thirty four feet wide and two lines water them well."

"The water is put on more evenly than the average man will with a hose, and another great advantage, the watering can be done at the best time for the good of the plants."

John Thorpe, in HORTICULTURE, May 12, 1906:—"The Wittbold watering system possesses so much merit and appeals so directly to progressive horticultural work that it must undoubtedly be appreciated."

W. B. Davis, Aurora, Ill., in HORTICULTURE, April 21, 1906:—"I do my watering now in one hour all seven houses—which formerly took two men half a day, and I can do it better at that."

Wm. Edlefsen, Milwaukee, in HORTICULTURE, May 5, 1906:—"I wish to say as a gardener who has been in the business all my life, that the Wittbold watering system has much merit and will save much labor in the greenhouse."

THIS SYSTEM WAS DEVISED FOR GREENHOUSE WORK, but can also be used for outside work with best results. It consists of pipes and tips so arranged that a continuous sheet of water the full length of the house can be supplied to a bench of plants and at the will of the operator can be directed upward from underneath the plants, downward from above the plants or parallel with the bench so that only the soil in the bench is watered. It can be used for syringing or watering. An entire house can be watered or syringed in only a few minutes. It is a permanent asset after being once installed, as it will never wear out, it is inexpensive and will save its cost in hose and labor in the first six months.

When watering or syringing is to be done and spray is obstructed by foliage, my small nozzle and 12-inch pipe tapped and fed every 25 feet is best. This system with all connections and pipe ready to put up will cost you \$20.00 per 100 feet. Separate nozzles, 15 feet each.

THE WITTBOLD HOSE NOZZLE

For greenhouse or garden use is far superior to anything on the market, the spray can be changed instantly from a fine fan-shaped spray into any form or shape the operator may desire, by simply pushing a sleeve backward and forward. This can be done as quickly as taking the finger on and off the hose. Price \$1.00. Handled by Seedsmen.

Single Begonias in Mixture—25 cents per dozen; \$2.00 per 100; \$17.50 per 1000.

Double Begonias in Mixture—40 cents per dozen; \$3.00 per 100; \$25.00 per 1000.

Gloxinias in Finest Mixed Varieties—35 cents per dozen; \$2.50 per 100; \$25.00 per 1000.

HENRY A. DREER

714 Chestnut Street,

PHILADELPHIA, PA.

Some People have taken our advice as published in these columns recently and are buying **My Maryland** for trial. We reiterate here—it if it succeeds with you as it does with us, it will prove the best white carnation you ever grew. Despite the variety's apparent failure in several places, we strongly advise all growers to give it a trial. We have been frank about its faults as developed in other places. We doubt if these will develop in many places.

Jessica we believe, will succeed generally and will prove to be the best red and white variegated ever disseminated. Few varieties show as strong constitution as this one does, and it is a wonderful producer. Extra fine stock of both varieties ready now. R. C., \$2.50 per doz. \$12.00 per 100; \$100.00 per 1000. Pot plants, \$3.00 per 100 extra.

WILLOUGHBY, O.

WE ARE HEAD-
QUARTERS FOR

PRINCESS VIOLET STOCK

The Princess of Wales is still the leader of all single violets. There is no other variety on the market that can compare with it as a commercial violet because it blooms from Sept. 15th to May 1st; every bloom is marketable. It has size, it has color, it has length of stem. It has fragrance. It sells when any other variety, single or double, can not be given away. The people want it.

So great is my confidence in this violet that the following Autumn I will devote 80,000 feet of glass to the growing of this variety.

I have about 200,000 nice young divisions now ready to ship at the following prices:

\$2.00 per 100	\$15.00 per 1000	500 at 1000 Rates	Lots of 5000 at \$14.00 per 1000
		Lots of 10,000	\$13.00 per 1000

Forsythia suspensa

Forsythias are blossoming most profusely this year. They are glorious shrubs! How kind they are to give us such a generous feast right after winter. They are one of the harbingers of spring in the shrub line. They have hastened along with their golden blossoms having no time to wait for the leaves to develop.

There are many shrubs which blossom in early spring which are destitute of leaves but the colors of the flowers in most cases are quite agreeable without the green foliage. Nature has made no mistake in producing the flowers before the leaves. They are not produced in this condition for man alone to enjoy them but insects also love the early spring flowers. The insects no doubt after a long winter's rest find it much easier to extract honey from flowers which have no green leaves amongst them and the flowers are also more easily seen.

I often think we don't half appreciate the beauties of spring. With the sunshine and rain there are most marvellous transformations of vegetation taking place every hour of the day. Yet people seem to take very little notice of it. There is no season of the year like spring, nearly every herb and plant is clothed anew. How few of us think of the enormous work these new green leaves have to perform. They are not produced just to look at, they have a tremendous work to perform before they return to Mother Earth next fall.

I must return to my subject but I should like to write you a sermon on spring. I pity the poor florist who is confined to his glass houses in glorious spring weather like what we are having now. It's strenuous work, digging, raking, planting, sowing, etc., but the invigorating fresh air, the music of birds, and the fragrance of spring flowers, makes a person feel glad that he is alive in such a wonderful and beautiful world as this is.

The plant in the picture I am sending you is *Forsythia suspensa* and is well-known to gardeners and florists, but it is not often used as it is shown in this picture. It is simply superb just now. This is a

gardeners' house but there are few millionaires that can boast of such an entrance to their castles.

Robert Cameron

Tomato Tip Rot

A short time ago I received this letter which may be interesting to others having the same trouble and at a loss to account for it:

"I planted a house of young tomato plants out of 2 1-2 inch pots on the 30th of January on solid beds. The plants grew very slow till latter part of February. Then I put a light top dressing of old manure on and after that time the plants are rank and healthy at the tops and blooming freely and setting well but half of the tomatoes when yet small on the first two bunches are rotting and some even on the 3rd and 4th bunch."

The plants are no doubt affected with what is variously known as point, tip or green rot, something common in tomato forcing houses. It is not a fungus disease, but a physiological disorder and is due to a lack of water in the soil. As the plants grow they require a

large amount of water and if, as in this case, the evaporation exceeds the supply, there will be a breaking down or "rotting" of the fruit.

Here, this condition is probably brought on by the plants being in solid beds. Frequent waterings pack the soil so that the top layers may be soaking wet while the lower ones are dust dry, the water running off instead of being absorbed, thus starving the roots.

The remedy is to be found in a careful use of the hose. If the top layers are kept mellow and in good tilth, and the bed thoroughly soaked down at each and every watering there will be no more trouble from this source.

Seed Separation

The separation of tobacco and onion seed is now quite extensively used by the growers of these crops in the Connecticut valley.

The Botanical Department connected with the Experiment Station at Amherst has installed an equipment for seed separation, and quite a large amount of onion and tobacco seed has been separated this spring for growers of these crops.

The method of separation employed is based upon the use of air. For the separation of onion seed we have employed a winnowing machine, which is supplied by a German manufacturer. This machine separates very effectually all the light seed from the heavy ones, and is capable of separating fifty pounds in a brief period of time. Tobacco seed has been separated by means of a foot bellows attached to a glass tube. The lower end of the tube is covered with a piece of coarse-meshed cloth, and the air is driven up through by means of the foot bellows. The chaff and light seed are driven to the top of the tube into another receptacle. The amount of light seed and chaff in tobacco and onion seeds runs all the way from five to twenty per cent., or more. These seeds are discarded by the grower, and only the larger and better ones are used.

The benefit derived from the practice of separating seed is important enough to be more extensively recognized. There is no reason why the practice of seed separation should not be employed in connection with various lines of green-house work, such as, for example, lettuce, radish and beet crops, except perhaps when the latter are used for greens. Many experiments have shown that large seed produce larger plants; they germinate better, and will prove more desirable for use.

The accompanying illustration gives the results of separating lettuce seed. The separation in this case was accomplished with sieves, provided with round perforations.

The percentage of seed ranging from 2 to 1.5 mm. was 10.15 per cent.; from 1.5 to 1 mm., 66.88 per cent. From 1 to .5 mm., 18 per cent., and below .5 mm., which consisted mostly of dirt and chaff, 4.19 per cent. The percentage of germination and weight of the seedlings in milligrams of the various grades of lettuce was as follows:

LETTUCE.

Size of sieves.....	2-1.5 mm.	1.5-1 mm.	1-.5 mm.
No. seeds germinated....	43 per ct.	35 per ct.	19.6 per ct.
Av. wt. of seedlings.....	43.3 mg.	41.0 mg.	31.6 mg.

It will be observed that the highest percentage of germination occurred with the largest seed, and that there was quite a difference between the percentage of germination of the seed obtained from the two lower grades of sieves. The average weight of the seedlings also is highest in those obtained from the large sieve, slightly lower in the second-grade sieve, and smallest in the lowest grade sieve. What passed through the 1-.5 mm. sieve was merely dirt and chaff, and of no use. At least 4 per cent. of the material bought in this sample of seed was of no value.

For the separation of lettuce seed on a practical basis, it would not be necessary to employ sieves such as were used in these experiments. One sieve would be sufficient for all purposes, and such a sieve should have perforations of about 1 mm. in diameter. Everything retained by this sieve can be planted; everything that passes through should be rejected.

In the experiment given here, such a sieve would reject about 22.91 per cent. of seed and chaff—in other words, it would reject the seed and chaff in the two right-hand bottles shown in the illustration.

If a greater degree of separation is required, a larger sieve could be employed—namely, one measuring 1.25 mm., or about 1-20 of an inch. These sieves can be easily constructed out of colander tin, which is generally carried in stock by most tin-men. We have made a sieve out of colander tin soldered on to the bottom of an ordinary spice box, the tin having perforations of about 1 mm. or 1-25 of an inch. Some of the large firms who manufacture perforated metal give the size of the perforations in fractions of an inch, and occasionally millimeters. Perforated metal with 1-18 perforations would be equivalent to 1.4 mm. This size sieve would take quite a large number of the smaller seeds. Such a sieve would probably remove 50 per cent. of the lighter seed, and by this practice one would obtain a very high grade of seedlings.

The sifting of lettuce, in our estimation, is a desirable thing for green-house men to practice, since it economizes space. It is much easier to accomplish the separation by sifting rather than by selecting the pricklers in the beds. It would be a comparatively easy matter to select the proper size of perforated tin for the separation of radishes, etc. The results of this separation would undoubtedly eliminate many inferior radish

plants which usually make their appearance and occupy space which should be utilized by other and better plants.

In separating onion seed, two methods have frequently been employed, one known as the water method, which discards all the seeds that float in water, planting only those that sink. The other method is separation by blowing, previously alluded to.

The following tables give the results obtained from both of these methods:

SEPARATION OF ONION SEED BY AIR PRESSURE.

	Heavy.	Light.
No. of seed obtained.....	71 per cent.	29 per cent.
No. of seed germinated.....	56.5 per cent.	29.5 per cent.
Ave. wt. of seedlings.....	25.1 mg.	18.9 mg.

SEPARATION OF ONION SEED BY WATER.

	Sank.	Floated.
No. of seed obtained.....	76.5 per cent.	23.5 per cent.
No. of seed germinated.....	42.5 per cent.	19.5 per cent.
Ave. wt. of seedlings.....	21.3 mg.	15.5 mg.

George E. Stone

Spring Flowers in England

In some respects English gardens are at their best during the months of April and May when the spring flowers in all their fresh, untarnished beauty give color to the bare brown earth. The gardener is always looking forward and never does he look forward with such eagerness and delight as when the early flowers commence to open. April is the month of daffodils and May the month of tulips and many ornamental flowering shrubs, while the rockery then daily grows in attraction and the gray rocks and stones become masses of color.

DAFFODILS

Few flowers have been so much improved by the hybridist during late years as the narcissus. The bicolor trumpets and yellow-cupped smaller forms of a few years ago are now almost entirely absent from daffodil shows and their place is taken by the lovely white and sulphur colored trumpets, and the flowers of the medio-coronati and parvi-coronati forms with cups or crowns of most brilliant coloring. Some of these cups and crowns are lemon colored, others are orange, orange-red or red, and contrasting as they do with the white perianth usually to be found in the same flower a most striking effect is produced. The development of the cup seems to have been largely the aim of the hybridizer. Some flowers now have broad flat cups or crowns and are quite distinct from anything seen before. The Rev. G. H. Engleheart has probably raised more of the lovely new daffodils than any other worker. Many of the finest forms exhibited today were originated by him:

indeed one section of the narcissus comprising flowers with short flat cups has been named the Engleheartii section.

The daffodil seems to have increased in popularity a great deal during late years: there are now throughout the country several societies devoted exclusively to the daffodil and all seem to be well patronized. Some of the newer varieties are very expensive. The famous white trumpet, Peter Barr, the largest and finest of the white trumpet varieties, was offered a year or two ago for fifty guineas a bulb and even now, after it has been on the market some time, forty guineas a bulb are asked. At the exhibition of the Midland Daffodil Society held at Birmingham last week fifty guineas were given for a new daffodil, a variety of the poeticus section. Any new variety of merit is certain of a good sale for daffodil enthusiasts are rapidly increasing. The fields of some of our largest growers are a lovely sight in daffodil time, when acres of these bulbs are in full flower. It is as fine a sight in a way as the bulb farms in Holland.

AURICULAS

Auriculas, admitted by everyone to be amongst the most beautiful flowers grown, are also regaining some of the popularity they proved to have lost. One large grower of these plants remarked that he had not had so many orders on hand for years as he has at present. The markings and colors of some of the varieties as exhibited at the recent show of the National Auricula and Primula Society were perfect, and elicited admiration from everyone. The auricula is not easy to grow, however, and to be successful with it one must treat it very carefully and not show it the slightest neglect. It is probably on account of the close and careful attention it needs that it is not grown largely except by enthusiasts.

THE ROCK GARDEN

The rock garden is one of the best features of the representative English garden and at this time of year a carefully planted one is full of flowers. White and purple rock cress (*aubrietia*), arabis and iberis are in full blossom; some of the saxifrages are out; the rich blue of the grape hyacinth covers some spot with a carpet of color; the alpine phloxes are in bud and bloom; in fact on all sides there are masses of flowers, and buds which give promise of perhaps still greater luxuriance. Blue bells make a dense undergrowth beneath the shrubs in the background, the sheen of the buds foretelling a season of bounteous blossom.

FLOWERING SHRUBS

These add a rare grace to the pleasure grounds, magnolias being now perhaps the finest of all. *M. stellata* which makes a bush is covered with its white star-like flowers, and *M. conspicua*, *Soulangiana* and others, in the form of large trees, are the delight of all who see them. Peaches and cherries are now at their best and isolated specimens or groups of them are most attractive. Soon we shall have a wealth of lilac blossom (most popular perhaps of all our flowering shrubs), genistas, rhododendrons, azaleas and many more.

Decoration Day

Decoration Day, or Memorial Day as many prefer to term it, has taken a strong hold upon the hearts of the people, regardless of condition, and now occupies a position second to no other holiday in the florists' calendar. In some sections, indeed, the business directly due to the special demands of the occasion exceeds that of any other holiday in the year, Christmas and Easter not excepted. The sentiment which finds expression in the peculiar observances and popular customs of this day is such that it assures a perpetual endurance of the holiday in its present form, with a certainty of increasing prominence from the standpoint of the florist and he makes no mistake who gives liberally of time and room to the production of crops especially for this occasion. A lavish abundance, with reasonable prices, will yield ample returns.

To investigate injurious insects

Each year sees the insect problem assuming a more serious aspect for the grower—out-doors or under glass. We can, possibly, render no greater service to the horticulturist than to assist him in combatting these insect enemies and the many plant diseases that impose so heavy a burden upon him. With this in view HORTICULTURE has secured the services of a trained entomologist and pathologist and will be glad to receive from its readers specimens of diseased twigs, plants or fruits or of injurious insects for identification and if the results obtained will in any way help the grower our object will have been attained. Send sufficient quantities and a full description of the trouble. Insects should be sent alive in a tight tin box with food enough to last through the journey. Postage is one cent an ounce on specimens. Mail manuscript separately.

An instance of short-sightedness

The business of the nurseryman dealing in ornamental trees and shrubs, the gardener, and the florist, are so closely interwoven and these three have so much in common that the lack of cohesion seems quite remarkable. The wonderful

increase in demand for hardy planting material now in evidence gives promise of extended prosperity on this and related lines for many years to come. No doubt it is a fact that the unprecedented call in an unusually short spring season has made it impossible for the dealers to assume any additional burdens at this time but it is certainly greatly to be regretted that the proposed out-door exhibition under the auspices of the S. A. F. at Dayton has thus far received so scant attention from those in whose interest it was projected and to whom it holds out advertising opportunities such as have never before been offered in this country. It is not to be expected that the present preponderance of demand over supply can long exist. The many new and extended nursery plantations and heavy importations must have their effect in due time and it would seem that it is not too early to start in now on those business publicity methods from which, sooner or later, there is no escape for the man who proposes to keep in the lead. We are pleased to learn, however, that despite the marked apathy on the part of the nurserymen a splendid out-door display at Dayton is assured, large spaces being already planted with cannas and hardy border plants.

Some peculiar results of the past winter

To the grower and the dealer and to the lover of spring-flowering trees and shrubs generally there comes every spring the absorbing question of the extent and character of the preceding winter's ravages. So erratic and unpredictable are these results as a rule that comparisons of one season with another bring out little of value on which to base conclusions as to cause and effect. The season just passed is no exception in this respect. For instance, just why *Rhododendron dahuricum*, earliest-flowering of all the garden shrubs, which has yielded a gorgeous display in the neighborhood of Boston for several consecutive springs should have every flower bud blasted this season, while the hybrid evergreen rhododendrons which in recent springs have lost a larger part of their flower buds have this season every bud intact, is a problem difficult to solve. Why should wistaria which was a mass of flowers last year be almost completely blighted this year while a few feet away stands a dogwood loaded with blossoms which last year and the year before lost every single flower head? Many other anomalies are in evidence. *Daphne mezereum* has been generally a failure; *forsythias*, on the other hand, are fuller and more gorgeous than ever before. Roses have wintered exceedingly well. Clematises, also, have been killed back only to a trifling extent. *Prunus tomentosa*, usually covered with flowers, is but sparsely furnished this year and *kalmias* and *enonymuses* have suffered considerable damage to their foliage. *Prunus cerasus* bore a normal crop. However, we have much cause for congratulation that the warm mid-winter and the fierce March that followed did not cause much more serious damage than now appears to have been the case.

AFTER ADJOURNMENT.

The new decorative material from the South offered as "gaylussacia," is proving deservedly popular. It is used in the same manner and produces effect similar to the well-known southern smilax, coming in in beautiful condition at this season when southern smilax is not to be had. In some respects it is superior to the smilax. Robinson & Co. are handling it for the Boston market this spring for the first time and are disposing of large quantities of this as well as southern ferns of the present year's crop.

Dahlias are discussed by Messrs. Engelman and Deegan in a recent issue of Moller's Deutsche Gartner-Zeitung, dahlia specialists. Both writers give their opinion as regards future dahlias, and predict a return to the pompon (liliput) dahlia and the old-fashioned varieties; the new large decorative dahlias are also recommended, but the Edel-dahlias (show-dahlias), so-called, are bound to disappear as quickly as the money which was paid for same. "Back to the old varieties, if we want more flowers than bush!"

The city of Lewiston, Me., recently made the generous offer of five cents for each brown-tail moth nest collected in the vicinity and brought in to the city marshal's office. After paying out over \$500, there now is "weeping and wailing and gnashing of teeth" in executive circles, caused by the discovery that most of the nests captured were not those of the brown-tail but the comparatively harmless native fall web worm. Other towns and individuals have been victims of the same mistake not infrequently. Whether the joke is on Lewiston or on her officials who were so simple is not yet settled, but they'll all know better next time.

We took occasion in our issue of last week to refer to the very gratifying revival in the demand for bedding plants, so-called. One of the most convincing instances of enterprise in this direction, in the west, is the establishment of Ludvig Mosbaek at Onarga, Ill., illustrations of which appeared in the issue above mentioned. Mr. Mosbaek is enjoying the legitimate fruits of liberal advertising, supplemented by well-managed shipping methods, calls coming from nearly every state in the Union, we are informed. When florists in New England send west nearly a thousand miles there are reasons. One of these reasons is advertising in HORTICULTURE.

We availed ourselves of the welcome opportunity, a few days ago, to call upon one of the most talented and successful gardeners of our times, J. F. Huss, of Hartford, Conn. We found him affectionately inspecting a lot of pans containing a few hundred thousand, more or less, seedling ferns of rare origin and glorious promise. Unlimited patience and skill were also evident in the new plantations of al-pines. Mr. Huss' collection of these

gems of the rock garden being probably the best in this country. At the present time the hardy primroses are a gorgeous sight. Some of the newer varieties are blue, with yellow eye, and make a striking effect among the more familiar yellows, oranges and reds.

OUT OF THE GINGER JAR.

Uncle John Thorpe's logic on the mechanical watering question is all right except that he does not tell how to mix brains and mechanism. That is the point the whole problem hinges on, and the Natick sage has been clever enough to keep to the point. Nevertheless, the subject is a worthy one. Theory is often knocked out by experience; but there must be a theory first if there is to be any progress.

The seedsmen and other opponents of the free seed graft are taking comfort out of the increased majority against this hoary abuse as shown by the recent vote in Congress. The leaven is working. The opposition have the best of it now as to quality, and it is only a question of time when they will have the quantity of votes on their side also. Let them keep ahammering!

The Hon. South Trimble is the name of the southern congressman who precipitated the uproar in Washington during the recent free seed debate by calling the seedsmen scoundrels and frauds and other choice names. The best we have heard of the Hon. South Trimble is that he has a long grey beard! Is it possible that appendages of that kind are to be taken in inverse ratio to the amount of grey matter behind them? If so we anticipate a rush to the barber shops. There will be no glory in having them "cover the ground for miles around" hereafter.

The "Wilderness of Millionaire seedsmen" referred to by the Hon. Jno. Wesley Gaines has not, up to latest reports, been located. Lieutenant Peary, Rear Admiral Melville and other intrepid explorers will doubtless take up a quest worthy of their prowess in the near future. The location is probably somewhere about the back of Balfuff! We have heard of several millionaires going into the seed business but never of one coming out of it. G. C. W.

REHMANNIA ANGULATA, HEMSL.

This Scrophulariaceæ is now given out by some large firms here and abroad; a native of China, this plant was re-discovered by Wilson in 1903 and introduced by Veitch to the trade again. The plant grows 3 1-2 ft. high, making a small column. On the upper part of the plant numerous nodding flowers are produced; their form is throatlike with an opening 3 inches across, the upper two petals being widely bent backwards; in appearance they are similar to the beautiful *Incarvillea Delavayi*. The color is a very pretty winerose, with yellow striped throat spotted with brown.

Rehmannia is only half hardy, for which reason it will perhaps make a better annual pot plant for winter decoration; or it may be planted in spring time in a sheltered bed; it is very easily propagated by seed and by layers made in September and carried over winter.—*Gartenflora*.

WHOLESOME CHESTNUTS.

Mow the grass on the lawn early and often; it is hard and slow work mowing when the grass is long, and tedious work raking the grass after it is mowed, with the additional annoyance of having to begin mowing over again almost immediately. If every bit of turf has not been rolled, delay the process no longer; rolling helps the grass and the appearance of the lawn wonderfully, besides making mowing a pleasant task comparatively.

If a newly sown lawn shows very many worm casts, run a light roller over it. It will do the grass no harm; it may do it some good, and it will flatten the worm casts. After rain, pound down the grass edges to where you want them, then do the edging. This work can be done much better and with more ease when the grass is moderately damp. Don't throw away the edgings or clippings of sod; instead, collect all of them into a heap, and by and by it will make some good stuff for potting or for some other purpose. This is only one wrinkle in garden economy out of many thousands which a gardener should know.

Dust gooseberry and currant bushes with hebe powder, thoroughly and frequently; gooseberries and currants will not mature if the foliage on the bushes happens to be destroyed.

Keep on sowing radishes every week for successive crops; the same with peas, lettuce, and beans; beets, too, should be sown at different times, in order to have them tender.

Carnations should be planted out now in rows wide enough apart to allow hoeing freely.

By and by there will be four-inch pots in abundance lying around empty; why not think of something to put in them that will later on bring in enough to pay for the pots.

Cannas are very effective when used for backgrounds for dwarfier plants, but they are more pleasing when planted in large masses by themselves, and on exposed places near the sea-shore they are almost indispensable, because nothing else so effective will stand as well.

On large places, little bits of flower beds, here and there, seem altogether out of place; borders are all right where their existence answers some purpose and their contents and outlines harmonize with the surroundings, but small, isolated patches of color often offend the eye.

IN THE WOODS IN MAY.

I hear the wind flower blowing; the crocus too is crowing;

The snowdrop has ceased snowing, and the lily gems the lake;
The crowfoot dances lightly, the starwort twinkles brightly,

And the shepherd's purse is open in the tangle of the brake.

The cranebill needs no paying, for we are only maying,

And with the flowers playing in the glory of the sun;

The spiderwort is spinning, the bishop flowers are shining,

For thus since the beginning have their human namesakes done.

Conc' out, the woods are ringing, with birds and flowers singing.

Each one a message bringing to gladden you and me.

It is a blue flag flying and Daphniphyllum's breeches drying.

Very satisfying to be a student of botany.

—George W. Riley, in Boston Herald.

NEWS OF THE CLUBS AND SOCIETIES.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTI- CULTURISTS.

The Trade Exhibit.

The Trade Exhibit will be one of the main features of the coming annual Convention of the Society of American Florists and Ornamental Horticulturists to be held at Dayton, Ohio, August 21, 22, 23 and 24, 1906.

You have goods to sell that florists use—that they must have—and being progressive, are always looking for something that will help you to increase your profits.

We feel assured that by taking space and making a creditable exhibit, no better medium could be offered you to bring more customers, and the only way through which you can present directly the high character of your goods to florists—live, wide-awake florists—actual buyers, such as always attend these conventions, ready for a good thing.

Dayton is exceptionally well located, being very central, in fact superior to any meeting place heretofore, and offers unexcelled railroad connections to all points; all of which insures a large attendance from all over the United States and Canada.

The exhibition building is specially adapted and arranged for the purpose, and on account of its shape—rotunda—with entrances on four sides makes all locations equally choice, thus giving better opportunities for the satisfactory display of wares.

The cost for space is little considering its intrinsic value. Diagram of exhibition hall, showing the location of each department, application blanks, copies of rules and all other desired information will be furnished promptly on application.

Have space reserved now—it's money for you.

HORACE M. FRANK, Supt.,
112 So. Main St., Dayton, O.

Badge Book.

In accordance with the instructions voted at the convention in Washington last August, the secretary is now preparing a "badge book" containing the names of members, numbered, and will issue correspondingly numbered badges to those whose dues for 1906 are paid previous to June 1st. Members in arrears for current year's dues as well as all persons intending to take our membership this year are earnestly requested to remit now. There is no advantage in waiting until the convention meets, as the fiscal year begins on Jan. 1, and payments made at any date during the year cover the interim until December 31 only.

Advertising.

The size of the badge book will be about 3 1-2 by 6 inches. Advertisements will be inserted at \$5.00 per page; one inch cards, \$1.00 each. Advertising copy must be supplied not later than June 20.

WM. J. STEWART, Secretary.
11 Hamilton Place, Boston, Mass.

NEW YORK FLORISTS' CLUB.

The May meeting of this club, on Monday evening, 13th inst., was attended by about fifty members. Mr. J. A. Pettigrew having been unable to attend and give his expected talk, the evening was devoted to a variety of topics and routine business. E. V. Hallock brought in and presented on behalf of his committee a series of resolutions eloquently expressing the sympathy of the club on the death of August Rhotert. J. H. Pepper, for the board of trustees, presented a report of progress and asking for further time on the question of the proposed national flower show and New York's possible selection as the location thereof. Messrs. Wheeler, Pepper and others participated in the debate. Mr. O'Mara had something to say regarding the free seed matter, and Messrs. Stewart, Wheeler, Butterfield and Schultz talked on the topic of advanced express rates by the U. S. Express Company. A vote was passed instructing the legislative committee to make protest on behalf of the club and take any necessary steps to secure, if possible, the withdrawal of the excessive charges.

The San Francisco disaster was taken up, and a committee appointed to extend sympathy and practical aid if practicable. Messrs. Traendly, Nugent and Sheridan were appointed a committee on Dayton transportation. It was voted that President W. F. Kasting be invited to attend the next meeting of the club, in the interest of the S. A. F. convention at Dayton. On the exhibition table were exhibits of rose Columbia, by Paul Nichol, which received a vote of thanks; *Cattleya gigas superbissima*, from Lager & Hurrell, which was accorded honorable mention, and *Nephrolepis Whitmanii*, which came under special personal care of H. H. Barrows—the old man himself—and which received much interested attention.

MORRIS CO. (N. J.) GARDNERS' AND FLORISTS' SOCIETY.

An unusually large number of the members assembled in their meeting rooms in Madison on May 11th to listen to a paper on hardy shrubs by Arthur Herrington, superintendent of Florham Parks. Like all of Mr. Herrington's efforts, it was of a high order and was well received by the society. As is the custom, considerable time was given to after discussion. Many questions regarding selection of sorts, hardiness of new kinds, etc., etc., were asked by members and cheerfully answered by the speaker. A very striking feature was the large number of Japanese species and hybrids that were to be seen, this being the occasion of the regular monthly show, which was hardy shrubs in flower. The room was literally filled. Mr. Herrington, alone, put up thirty-six species and varieties, which was a remarkable thing for this time of year. Mr. Herrington's address is published in this issue.

E. REAGAN.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

At the monthly meeting on Tuesday evening there was an exceptionally fine exhibition. Awards were made by the judges as follows:

Blue Hill Nurseries; report of merit for *Aruncus astilboides* var. Kneiffel.

George Page; honorable mention for *gladiolus Blushing Bride*, rose *Climbing Kaiserin* and *Iris hispanica*.

R. T. McGorum; honorable mention for candytuft *Giant White Perfection*.

H. L. Cameron; honorable mention for seedling *geranium H. L. Cameron*.

J. T. Butterworth; cultural certificate for specimen *Cattleya Mossiae*. Certificate of superior merit for *Cattleya Mossiae* var. *Reineckiana* with 15 flowers.

H. A. Stevens Co.; vote of thanks for phloxes, stocks and doricums.

Blue Hill Nurseries, vote of thanks for collection of perennials.

Alfred Poetsch; vote of thanks for *Impatiens Holstii* x *sultani*.

NEW LONDON COUNTY HORTI- CULTURAL SOCIETY.

At the meeting held on May 7 the show committee reported that the rose show would be held in Norwich in June, the dahlia and gladioli show in the same place, the summer show in New London, but the place for the chrysanthemum show and the dates for the other shows were not decided. A number of cash prizes had been offered for the chrysanthemum show, but none for the others. The speaker of the evening was J. H. Slocombe of New Haven, whose subject was "Dahlias and Gladioli: Their Varieties and Culture."

NEW BEDFORD HORTICULTURAL SOCIETY.

The monthly meeting of the New Bedford Horticultural Society was held in the rooms of the Y. M. C. A. building on Monday evening, May 14. In the absence of an address, the question box was brought into requisition, and a profitable and interesting evening was spent in discussing the cultivation of dahlias, the laying down, fertilizing and care of lawns. A prominent manufacturer of bone meal, who was present, impressed upon the audience the fact that for horticultural purposes generally "there is nothing like leather." T. WHITE.

CLUB AND SOCIETY NOTES.

The Lenox Horticultural Society, Lenox, Mass., will hold their annual rose and strawberry show on June 26.

C. L. Burr was chosen president of the Springfield Amateur Horticultural Society (Mass.), at their meeting on May 4.

American Paeony Society. The annual meeting and exhibition of this society are scheduled to take place at Boston, June 14th and 15th. A very extensive exhibition is promised.

The Worcester County Horticultural Society (Mass.) held an exhibition on May 10. Pelargoniums exhibited by F. A. Blake and magnolia and Jap-

anese cherry blossoms by O. B. Hadwen attracted marked attention.

At a meeting of the Cincinnati Florists' Society held Saturday, May 12, it was decided not to give the usual annual outing but to save the time, energy and money for the Dayton convention.

At the annual meeting of the Conn. Horticultural Society at Hartford, on May 11, officers were elected as follows:

President—A. C. Sternberg, West Hartford.

Treasurer—W. W. Hunt, Hartford.

Secretary—Alexander Cumming, Hartford.

Statistician and Professor Vegetable Physiology—G. A. Parker, Hartford.

Pomologist—A. C. Sternberg, West Hartford.

Librarian—Alexander Cumming.

County Vice-Presidents—Hartford, R. A. Griffing; New Haven, J. X. Amlryn; Windham, D. A. Lyman; New London, W. B. Colt; Fairfield, Edwin Hoyt; Litchfield, Henry H. Bridgman; Tolland, O. A. Leonard; Middlesex, A. N. Pierson.

THE SPRING FEELING BREAKS OUT IN PHILADELPHIA.

Niessen's base ball team is open for engagements with any similar nine in the trade. Address: John Wilson, 1217 Arch street, captain, pro tem.

The Philadelphia florists cricket team is reorganizing for the season. Wm. C. Smith has been secured as wicket keeper. Other positions are still open. Those who can play some—or even make a stab at it—are requested to send their names to G. C. Watson, 1614 Ludlow street.

The Florists' Gun Club of Philadelphia has again won the league championship of Philadelphia and vicinity—this time against strong opposition. Meadow Springs club had a good chance up to last Saturday's match. The score then was 204 to 206, in favor of the Florists. There were ten clubs in the League, and each shot two matches with every other team, home and home.

GEORGE C. WATSON.

BOSTON'S GREAT PARK SYSTEM.

Boston's park system contains 15,175 acres. They are connected by nearly 26 miles of boulevard and there are over 110 miles of park roadway. They have cost to date \$33,275,050 and require an annual expenditure of \$521,465. There are only two cities in the world whose park systems even remotely approach that of Boston in size or diversity; these are London and Paris. When the Charles river dam is completed Boston will have a great fresh water basin of unsurpassed beauty.

SARRACENIA HYBRIDS.

S. Cookeana x S. Courtii Veitch gave two new crossings, one resembling S. Cookeana and the other S. Courtii Veitch. In both cases just the opposite plants were used as male and female parents with the result that both hybrids show a much closer resemblance to the male parent plant. The hybrids are both superior to the parents in shape as well as in coloring. —III. Gartenzeitung.

THE SENIOR CLASS AT AMHERST AGRICULTURAL COLLEGE.

We present herewith, through the courtesy of Prof. Waugh, a group photograph of the class in horticulture which will be graduated at Amherst this year. The picture includes only

those students who elect fruit growing, floriculture or landscape gardening in their senior year. The majority of these promising young men expect to go directly into some line of practical horticultural work.

NEWS NOTES.

Frank Miller & Son are to open a florist store in Waterbury, Conn.

The explosion of a powder magazine nine miles away destroyed the glass in a conservatory owned by D. S. Whitcomb at Milford, Conn.

Hermann Thiemann has disposed of his business in Owosso, Michigan, and will return to the Old Bay State, locating in Belchertown.

W. R. Boody & Co. have removed from Northboro, N. H., to York, Maine, where they will do a florist and landscape gardening business.

The greenhouses on the Coolidge farm, East Sudbury, Mass., have been leased by Christopher Johnston, who has had charge of them for several years.

Paul Kaese, of Wm. Hagemann & Co., 55 Dey street, New York, sailed on the Kaiser Wilhelm der Grosse, May 15th, on a short business trip to Europe.

Mayor Fitzgerald has appointed Daniel H. Coakley to succeed Laban Pratt as park commissioner for the city of Boston. The term is for three years and there is no salary.

A movement to organize the florists of the South, which originated with the New Orleans Horticultural Society, will probably take definite shape on May 22d, when a meeting will be held at Chattanooga, Tenn.

The tulips in the Boston Public Garden have made a gorgeous spectacle during the past week. Over 400,000 are planted each year and they are always the most effective of the suc-

cessive floral displays in this renowned spot.

Among the remarkable escapes in the California disaster is that of Luther Burbank whose home and experimental garden at Santa Rosa were undisturbed. His valuable collection of photographic negatives was unbroken, although the other half of the gallery in which they were stored was completely ruined.

A spraying demonstration, similar to the one held two years ago, but on a considerably larger scale, was given by the department of horticulture of the Massachusetts Agricultural College at Amherst, on May 17. While primarily intended for the students it was deemed of sufficient general interest to invite the public, and the operations were followed with close attention by a large number of spectators.

PUBLICATIONS RECEIVED.

Sander's List of Orchid Hybrids. This book will be found indispensable to the orchid enthusiast and grower. It records the names and parentages of all the known orchid hybrids, whether introduced or artificially raised. The contents are arranged in three tables, table I giving the name of the hybrid, alphabetically placed, followed by the name of the parents; table II giving, first, the seed parent, in alphabetical order, followed by the name of the pollen parent and the product, and table III reversing same. The book represents an infinite amount of patient investigation and toil, and its compilation would be an impossibility outside of a place like Mr. Sander's establishment. Orchid growers are under great obligation to Mr. Sander for this concise and practical work. It contains 125 pages, with blank interleaves.

SAN FRANCISCO NOTES.

As far as California trade is concerned, generally speaking, the outlook is bright. The crops are very promising, assuring us of excellent harvest returns, and they are not far off now. In a few weeks we shall be selling our crops of 1906 and receiving fine returns for them. We have as much Pacific ocean to the West, North and South and as many railroads to the East of us as before the earthquake-fire. Our ships and cars are still with us. We have the crops to put into them, and as soon as we can get some of the litter and rubbish cleared away from our doors, so that we may go in and out our business as a city and State will proceed as if nothing had happened.

I had a talk this week with John H. Sievers, the Hannah Hobart grower, and passed on with his invitation to call again next week, the impression being that he would then have some trade news to give out. This reference reminds me to say that this gentleman and his partner, under the trade name, Sievers & Boland, lost by the earthquake-fire the largest and most beautiful flower store in the city; also, to state that the important asset of San Francisco at present is the insurance money due on fire policies, none of which is yet paid. On receipt of this money the preliminary work of rebuilding the city, even now commenced, very largely depends. The situation in this respect was explained this week by one of the fire companies to a prominent seedsman, nursery owner and policyholder, as follows:

"We have 4,000 risks in San Francisco. Under the most favorable conditions we do not expect to be able to adjust more than twenty per day, which will require 200 days for the readjustment. When you will get your claim adjusted depends upon the time the adjusters reach your case. You may be one of the first and you may be one of the last. You know as much about it as we do."

I was pleased with the sight yester-

day, May 10, of a very considerable gathering of growers from all the adjoining bay counties, and San Francisco florists, although the occasion was peculiarly sad. It was in attendance at the burial ceremonies over the earthquake-fire remains of M. Frank, formerly a violet grower and chief member of a prominent downtown flower store trading in the name of Frank-Parodi Company. The earthquake caught him in his sleeping-room, two floors above his flower store and hurled him, with tons of brick, into the basement below, and only two days ago the charred remains of the body were found. Many beautiful floral tributes of respect were contributed by florists and growers.

OBITUARY.

Charles P. Grimmer, for many years a well-known florist of Boston, died at Chatham, Mass., on May 10, aged 63 years. Mr. Grimmer came to this country when a young man and after spending some time with florists in the West located in Boston, where, in 1873, he started in business, on West

street, and rapidly built up a large and profitable business and by his energetic methods, integrity and attractive personality maintained a position among the leading florists of Boston until about two years ago, when his health broke down, since which time he has been unable to attend to any business. He leaves a widow and five children.

Anthony Cook, noted as a florist and horticulturist died at his home in Baltimore, Md., on Sunday, May 13, at the ripe age of ninety years. Mr. Cook conducted a florist business on Mulberry street for 48 years. He was the raiser and introducer of a number of valuable plants, including the Cornelia Cook rose and some fine double geraniums. He was born in Derkheim, Germany, and came to Baltimore 65 years ago.

Hans Bartels of Milwaukee, Wis., died on April 30, at the age of 48. He leaves a widow and one daughter. He was a member of the S. A. F. for several years, but resigned in January last.

William A. Coffin of Newburyport, Mass., died on May 9, aged 80.

PHILADELPHIA NOTES.

Louis Burk, the well known orchid amateur, has just completed a splendid specimen of the Japanese garden at his residence, Fisher's Lane and Wyoming avenue. In extent and completeness it surpasses even the fine example of this style of gardening at the estate of Jno. T. Morris, Chestnut Hill.

J. J. Habermehls' Sons had the contract for filling the window boxes for Strawbridge & Clothier this season. There were over one hundred boxes, each over six feet in length. The effect on the frontage of the big building is very beautiful and a grand object lesson for the passing throng.

The new tennis court at Lindenwold, the residence of Jno. Wanamaker, is now completed and is unique and worth going to see. Jno. Dodds is now warm in his new position and takes pleasure in showing visitors around.

On May 11th a petition in involuntary bankruptcy was presented against Chas. P. Poryzees, 15th street below Chestnut, by the Leo Niessen Co., Robt. Craig Co. and the Philadelphia Wholesale Flower Market. It was thought some time ago that Mr. Poryzees had been able to make arrangements to carry on, but the safe-guarding of all interests made the above action necessary.

Nellie Thoires, daughter of James M. Thoires, the Camden florist, met with a serious accident recently in a wagon collision. Arm and collar bone broken. The accident was due to the recklessness of the driver of a brewery wagon, who drove off at top speed and escaped in the darkness. Much sympathy is expressed for the sufferer and her family.

Geo. Rhedemeyer, the well-known president of the beautiful Harleigh Cemetery, has been engaged the past six months in laying out Forest Hills Park, Camden's new pleasure grounds.

Harry Bayersdorfer and Mrs. Bayersdorfer reached the other side safely on the 10th inst., all well.

We regret having to report a non-suit in the case of Wm. J. Baker against the Adams Express Co. From what we learn the decision was based on a technicality and appears to have been a practical miscarriage of justice. Mr. Baker could doubtless win out on an appeal, but apparently thinks the game not worth the candle.

ARE YOU GOING TO BUILD

I am interested in a glass factory. I want to hear from you before placing your order for glass. I think I can put you in the way of saving some money. State quantity, quality, and size wanted. Attractive figures are offered in all sizes, but for anyone who can use the smaller cuts such as 8 x 10, 10 x 12, or 10 x 15, a specially favorable opportunity is open at present on account of a surplus. Don't wait. Higher prices will prevail soon.

Flowering Trees and Shrubs.

(Read before the Morris Co. Gardeners' and Florists' Society by A. Herrington.)

"The floral story of the year as we read it in successive chapters contributed by the flowering trees and shrubs is one of rich and fascinating beauty. Age cannot wither nor custom stale this infinite variety of beautiful life which contributes so much to the joy of living especially just at this time when vegetation awakes from its long winter sleep and bursts into glowing masses of brilliant bloom.

"Almost every country has its characteristic features of vegetation but the floral feature that most impresses me in American gardens is the lavish profuseness with which our flowering trees and shrubs enwreath themselves in blossom every year. You must have remarked and noticed it and appreciated the enhanced beauty of many things that we have known all our lives, but only in later years under American associations.

"Let me cite but one instance, that of the glowing yellow Forsythia suspensa. It has been a familiar shrub to me since boyhood days and there comes back to me recollections of benumbed fingers training and tying the shoots to garden walls on cold winter days and then the subsequent flowering but what was the result and what the display in comparison with that of the same shrub grown here without special care. As I write these notes I look out of the window and two miles away I can easily distinguish a mass of forsythia flower upon a hillside, and what is there to compare with it, and at so early a date when even green leaves exist only in tender budding embryos. For equal effect in color I can only recall one thing, a mass of yellow broom, or of furze, as they grow on dry slopes in England, but these are not hardy there. What the forsythia so fittingly exemplifies is further and frequently expressed by other shrubs that succeed it in times of blooming.

"The importance of these things should not be lost to us because they are common, cheap, easily-grown, hardy shrubs. This precious heritage of bloom with which we are so richly endowed should be an incentive to effort to give its fullest expression in every possible way for I am assured given area and scope we may with hardy flowering trees and shrubs alone make gardens and parks of surprising beauty equalled by few and excelled by none in any country.

"Why should we spend time and money in endeavoring to reproduce at the best, weak imitations of so-called Italian gardens, under conditions and environments to which they are not fitted? These ancient and over-praised formal gardens belong to a past age and generation, where art supplanted nature, because the rich store-house of nature was unknown to the men of those times. Travel and research have brought to us from all parts of the globe, and latter day hybridization has further amplified a wealth of material that does not harmonize with garden formalism, but does permit the creation of a succession of pictures changing with the days and weeks for a long continued period. Let the garden un-

fold the story of the year and be a living floral calendar so that if perchance we could be unmindful of or forget the actual period we may read it in the floral pictures as they appear.

"We will now pass in brief review the hosts of flowering trees and shrubs that our gardens should possess, at least in such part as they are adapted therefor.

"One of the earliest harbingers of spring among the shrubs is the little *Lonicera fragrantissima*, its flowers individually small and insignificant, so much so that generally the first intimation we have of its flowering is when we catch a whiff of its fragrant breath upon the air. It makes a large bush and early flowering and delicate fragrance are its particular attributes. The forsythias come next, and no words of praise can ever exaggerate the beauty of those. Individually or in a mass in any soil, aspect and situation they give us beauty of the highest type. The oldest and best known species is *Fortunei* and although the catalogues make mention of *F. intermedia* and *F. suspensa*, the difference in these is but slight. *Forsythia viridissima* however, has more marked distinction in habit of growth, size of leaf, color of bark and also is about a week later in time of flowering. Simultaneously with the foregoing, magnolias burst suddenly into bloom, and what an array of beauty they can give us. The entire family in scope and importance justifies an essay on it alone. First comes the graceful *M. stellata*, also known as *Halleana*, and how free it always blooms from an infant bush, three feet or less in height upwards, bearing myriads of fragile snow white flowers often sadly buffeted by cold spring storms yet we could ill dispense with its short lived display. Another magnolia that resembles it in some degree, but is rather shy blooming, yet withal one to have in any collection is *M. Kobus* or *Thurberi*. Next comes *M. conspicua* throwing its great white cups open to the spring sun, and a few days after it the gem of the whole family *M. Soulangeana*. This is of hybrid origin, the *conspicua* one of its parents and *obovata* the other; it shows characteristics of both plants, flowers abundantly when young and in a shrubby state, and still more abundantly when it ultimately reaches the dimensions of a good sized tree. To him who is so unfortunate that he can only have one magnolia this is the one he should plant. *M. speciosa* is another hybrid with some strong resemblance to the preceding kind, differing chiefly in its free branched symmetry of growth, having flowers not quite so large, and it flowers a few days later whilst stray flowers prolong its blooming till foliage is well developed. *M. Lennei* is a striking beauty and unlike all the others its great cup shaped flowers a rich claret-color externally the flowers heavy and lasting and their period of duration and production considerably prolonged.

"Then in the later weeks come other great magnolias that attain to tree

form, but time does not permit of enlarging upon these. The "*Snowy Mespilus*," *Amelanchier Botryapium*, is another gem of early spring days that enwreaths itself in garlands of fleecy white bloom. The season advances and the Judas Tree next commands attention by the strong tone of color it adds to the ever changing scene. *Cercis canadensis* we call it by name but how shall we fittingly express in words its exceeding beauty and lavish profusion, twigs thick branches, aye, and often the main trunk itself covered with clusters of purple bloom. *Cercis japonica*, a Japanese relative is also distinct and showy, having larger flowers, but in our latitude in winter kills at times, therefore is rarely seen to advantage.

"Next in the procession come the spiræas, and first of this great family, of which there are at least two dozen species, is the double flowered plum-leaved *Spiræa prunifolia*. It ranks as one of our very best flowering shrubs so profuse and lasting is its bloom. *S. Thunbergi* blooms at the same time, has tiny flowers but in such myriads that a mass of it viewed from a distance suggests a snowbank that has not yet disappeared in spite of the spring sun. *S. Reevesi* in single and double is a good species, whilst a little later in its own time of blooming. *S. Van Houttei* is easily the most graceful and most attractive flowering shrub of its time. Others follow in succession through the months of June and July.

"Another great family that by close relationship, suggests itself for bold in associated planting contains the almond, peach, plum, cherry, apple and the Japanese quince. Think of the possibilities of these alone for making a garden picture of incomparable beauty. Space prohibits enlarging upon at least a hundred varieties included in this great group. Unfortunately in latter days we are to be denied much of their beauty unless by persistent spraying we shall eventually get the upper hand to the extent of entirely exterminating the devastating San Jose scale. Bear this fact in mind in your planting, all these ornamental types of that great natural order that gives us our orchard fruits are just as susceptible to attack and quick extermination by the aforementioned pest.

"Fortunately most of the other families of blooming shrubs are immune, otherwise the outlook for tree and shrub life in parks and gardens would be a dreary one. As May declines and June arrives, new hosts come trooping on the scene. Think of the dogwood and try to express the joy and admiration it excites in you. Then there is lilac time, always a well remembered period of the year, even in the old days when we had only the few natural species. Now, thanks to the hybridizers' skill, we have varieties galore of a quality undreamed of not so many years ago, in single and double flowers larger individually, gigantic in the cluster and the range of color a phenomenal one from white through tender pinks

JULIUS ROEHRS CO.

Rutherford, N. J.

and exquisite blues to deep dark purplish red.

"In graceful delicate contrast to great masses of lilac we have the "Snowdrop Tree," *Halesia tetraptera* and *H. diptera* with myriads of white bells depending from their far-flung branches. *Philadelphus* and *deutzia* are two more important families, and if we want relief from so much of snowy whiteness as seen in these, we turn to the *weigelas* in variety of hue from pink to crimson. The *viburnums*, too, impress their importance on us, and the wild roses we must have in their season, such species as *rugosa*, *lucida*, *setigera*, *multiflora* and *Wichuraiana*.

"The mention of *rhododendrons*, *kalmias* and *azaleas* conjure up visions of greatest beauty, providing we have the conditions that suit them. Failing such, it is far better to ignore them for adaptability of material to existing conditions is always the best course to pursue. Enough has been said to prove the amazing variety of flowering trees and shrubs.

"A few words in conclusion may be said as to care and attention. In all gardening practice there is nothing that gives so large a return at a minimum of cost at all comparable with flowering shrubs. They can all be easily and cheaply produced and planted with assurance of future satisfaction. The autumn months are the best for planting with few exceptions, one of the most noteworthy being the *magnolias*, which owing to peculiar conditions of roots, should always be planted in spring. The only actual important factor in subsequent treat-

ment is the judicious use of the pruning knife, and judging from what one daily sees in many places this matter is not properly understood. Indiscriminate winter pruning often results in cutting away one-half or more of the flowering wood. Some pruning is necessary for many of the subjects enumerated, but no hard and fast rule can be laid down. Generally speaking, however, there should be less winter and more summer pruning. No shrubs that flower in spring upon the wood of the previous season's growth, and these are the majority, should be winter pruned. The opposite is equally true. Any shrubs that flower upon the current season's growth may be winter pruned. As for example, the *althæas* or tree mallows and the *hydrangeas*.

"The bulk of the flowering shrubs, however, should be pruned immediately after flowering. Such pruning to be the proper thinning and cutting away of the shoots that have flowered. This practice encourages a strong new growth, ensures good flowering wood for another year, and preserves that all essential individuality of form and varied habit of growth that marks the different species and aids effective disposition of them in any general planting scheme.

Jolly times coming soon the big woods know -
Skies flaunting blue again, the winds sing low;
Birds flying back with another year's song;
Summer time, flower time, coming right along.

—Boston Transcript

BOUVARDIAS.

A reader asks regarding the culture of *bouvardias* for winter and spring blooming. *Bouvardias* in several kinds, such as the old scarlet *leiantha*, *Vreelandi* or *Davidsoni* white, *Alfred Neuner* double white and *President Garfield* double pink were grown quite extensively for the cut flower market a few years ago, but are seen only infrequently of late, the difficulty in controlling the crop and of getting continuous bloom being one of the causes of its abandonment probably. The regular crop came in at Christmas and then again in May, and there was no intermediate crop to speak of. One species, *Humboldtii*, is, however, a free and constant bloomer, and its long-tubed, pure white jasmine-scented flowers may be cut every day in the year. It is an exceedingly pretty and appropriate flower for choice use, such as bridal work, but is easily bruised and is not well calculated to withstand the rough handling of the wholesale markets. It likes a warm, airy place and can be grown nicely in boxes set along the side of the walk in the rose house. It roots readily from cuttings in spring, or can be increased by root division. Cuttings will begin to flower when in thumb pots. These flowers should be pinched out and the plants set out in the field, as is done with carnations. They should, however, be potted or boxed and taken in early in the fall, as they are very tender.

GRAFTED ROSES

KILLARNEY

and all of the leading varieties. One hundred and thirty-six thousand rose plants grafted this year. Read our list:

Grafted Stock. From 2½ Inch Pots.

KILLARNEY. \$20.00 per 100; \$150.00 per 1,000.

Richmond. \$25.00 per 100; \$200.00 per 1,000.

CUT FLOWER MARKET REPORTS

BOSTON The present week finds business pretty quiet all along the line in the cut flower trade. There is an abundance of everything and prices are sagging, generally. Decoration Day, which is always an event of great importance in this market, is the topic of the hour and extensive preparations are under way on all sides for an unprecedented business. Many special crops, such as astilbe stocks, lilies, etc., are being pushed along for this occasion. The "supply men" are also very busy on heavy orders from all over the New England States.

BUFFALO A slight improvement in the market was had the past week, but only on the carnation line. Colored carnations, especially Lawson and red, were a little scarce, and prices advanced a trifle on that line. Easter lilies and callas came in quite as plentiful as previous weeks and, floral work being a little slow, they seemed to glut at times. Roses came in in enormous supply. Select stock seemed to move quite freely, but the shorts moved slowly and at very low prices. A few openings amongst the down-town people helped to clean the market, but the next day's supply seemed to fill up as fast as could be worked down. Out-door stock is beginning to come in, and some good tulips and narcissus are seen, but not moving as fast as desired. Excellent sweet peas can be seen daily, and prices are good for fancy stock. Other flowers together with greens in good supply and demand normal.

CINCINNATI The cut flower business has been rather quiet for the past couple of weeks. Out-door stock is slacking up but there still remains enough to hurt the sale of indoor flowers. Roses are getting small and in some cases badly mildewed so that really first-class stock is scarce. Carnations are fairly good but they too are showing the effects of the warm weather. Sweet peas and Harrisii lilies are in good shape but have to be sacrificed in many instances in order to move the stock. Out-door lily of the valley is done for but the market is

well supplied with a good grade of indoor stock. The outlook is for better conditions this week. It is thought that for June weddings and school commencements stock will be exceedingly scarce in this market.

COLUMBUS The past week has been one of cold weather; as low temperature as 24 degrees above having been recorded in this vicinity. Only one result could follow, and that was a sudden end to the great run of trade we were having in every line. Hundreds of thousands of tomato plants have been lost, as well as the peach, strawberry and blackberry crops very badly injured indeed. We have had the worst freeze in years—and what made it so bad was that it lasted four days without the least let-up. Trade will no doubt be quite good the rest of the month, and half way, say into June, but the grand business everyone was doing before this cold snap came, will be seen no more this year. Funeral flower work had been very good all the week, but apart from that, sales have been few and small. The seedsmen as a whole are well satisfied with the business done; perhaps the total number of orders will not exceed previous years, but that they have averaged larger all are agreed.

DETROIT At no time during the past week were the wholesalers troubled with an over supply. Roses were a little numerous at times but the demand has kept them going. Carnations have been meeting the demand at a very close margin and at times when business was on the rush the wild goose chase was indulged in. Sweet peas keep up their sale at a lively pace. Some lilac and snapdragon are being sold but with little regularity. Lilies are very fine. Trade in general has improved.

LOUISVILLE Trade the past week was fair with an inclination in favor of plants rather than cut flowers. The demand for carnations and roses continues good, and the quality is all that could be desired. Sweet peas and lily of the valley are abundant, the latter finding a particularly ready sale. Lilies are still quite plentiful. There is a good supply of other stock, but the demand is none too brisk.

NEW YORK A very moderate trade has been experienced here during the past two weeks and values have dropped on all lines except carnations which have been in very light supply and have brought excellent prices when obtainable. Roses of all varieties are very abundant. There are enough of good quality to fill all demands but there is a big proportion of poor grade stock, much of it badly mildewed, for which the returns must be exceedingly low. Sweet peas are showing up in large quantities; they are very handsome as a rule. Cattleya gigas are coming in in rich abundance. Lily of the valley from frames and out doors is abundant and most excellent. Dogwood branches, lilacs and other out-door material are used in large quantities for window adornment and large decorative work generally and the sale of the standard stock of the wholesale florist suffers accordingly.

PHILADELPHIA Except for the little spurt on Friday and Saturday, caused by the children's May processions, business last week would have been rather slow. As it was, the average was fair. The affairs mentioned cleaned up the market on the lower grades, and toned things up for the better qualities. Roses and carnations were both very plentiful, with prices uneven and spasmodic. Kaiserin roses are showing some improvement. Chatenay and Killarney are still plentiful, and in very good shape. Enchantress, Patten, Lawson and Fenn are the leaders in carnations. Lily of the valley is going better, and is of fine quality. Sweet peas are of finer quality than ever but rather over-plentiful, and prices are low. Gardenias, quality fair and demand poor. The most refreshing event of the week's market was the advent of the peony. Festiva Maxima, Reevesi, Victoria Tricolor, L'Esperance and officinalis rubra were the varieties most in evidence. Prices are running about from \$4.00 for red, \$8.00 for pink, to \$12.00 for white, dark blue and light lavender. This added a touch of variety also to the week's market. Lilac is still plentiful.

HORICUM**KILLS SAN JOSE SCALE**

Made by **HAMMOND'S SLUG SHOT WORKS,** Fishkill-on-Hudson, N. Y.
 SOLD BY SEED DEALERS OF AMERICA.

Glenside, Pa., March 31, 1906.

HAMMOND'S SLUG SHOT WORKS, Fishkill-on-Hudson, N. Y.

Gentlemen:—Seeing "Horium" mentioned in Monthly Bulletin of Div. of Zoology, Penna., I would thank you to inform me where I can get a supply, say about a gallon for trial.

The San Jose Scale is very bad around this section and could no doubt push sale of the solution, especially as it is spoken of so highly in above Bulletin.

Your early reply will oblige, Yours respectfully,

P. S. Glenside is twelve miles from Philadelphia.

STRIKE STRIKE STRIKE

My heating men are not out on strike. Why? Simply because I granted their demands for increase in wages at once. I am well aware of the fact that to get the best results you must have the best mechanics obtainable. That is the reason I am constantly in receipt of such letters as this.

Mr. Wm. H. Lutton,

Dear Sir:—Enclosed please find check in payment in full of heating contract for my No. 4 rose house, everything is perfectly satisfactory, and I am much pleased with your work as well as your promptness.

Yours very truly, A. P. SMITH.

Let me figure on that heating or repair work, it will be to your interest. Everything in heating, boiler supplies, rates, smoke boxes, fire doors, etc.

YOU DON'T HAVE TO BOTHER

painting the interior of a U-Bar greenhouse every year or so.

U-BAR GREENHOUSES Are the Best Greenhouses Built

because the interior finish is aluminum and its a finish that lasts. It's just as light as the day it was put on five years ago, in the first house we tried it in. Not a speck of mildew to be seen. It's just the kind of house that fills the gardener and the owner with merited pride.

THE RIDGE— OUR KIND

In the first place the ridge cap is grooved to take the tongue of the ridge—this insures an absolutely perfect lining up and an even overhang on both sides; the overhang is grooved for vent sash, making a storm-proof proposition.

The sash bars are fastened to the ridge by a wrought steel "hold fast," which being screwed to the sash bar and ridge, makes a strong, tight non-spreading joint.

—Now you see how strongly the entire ridge is bound together—it's just our way of binding and strengthening the entire house—it's the kind of house you are bound to buy if you don't want to bind yourself to disastrous repair costs.

**WE ARE HEAD-
QUARTERS FOR**

PRINCESS VIOLET STOCK

The **Princess of Wales** is still the leader of all single violets. There is no other variety on the market that can compare with it as a commercial violet because it blooms from Sept. 15th to May 1st; every bloom is marketable. It has size, it has color, it has length of stem. It has fragrance. It sells when any other variety, single or double, can not be given away. The people want it.

So great is my confidence in this violet that the following Autumn I will devote 80,000 feet of glass to the growing of this variety.

I have about 200,000 nice young divisions now ready to ship at the following prices:

\$2.00 per 100

\$15.00 per 1000

500 at 1000 Rates

Lots of 5000 at \$14.00 per 1000

Lots of 10,000 \$13.00 per 1000

Special Prices TO CLOSE OUT Tuberous Begonias and Gloxinias

We have a surplus lot of Begonias and Gloxinias of best quality. In order to close them out quickly we offer at reduced prices. If these bulbs are started now they will make an attractive display during the summer months, at a time when there are but few flowering plants in a salable condition in pots.

Single Begonia—Separate colors. Yellow, Red, Pink, Orange and White, 30 cents per dozen; \$2.25 per 100; \$20.00 per 1000.

Single Begonias in Mixture—25 cents per dozen; \$2.00 per 100; \$17.50 per 1000.

Double Begonias in Mixture—40 cents per dozen; \$3.00 per 100; \$25.00 per 1000.

Gloxinias in Finest Mixed Varieties—35 cents per dozen; \$2.50 per 100; \$25.00 per 1000.

HENRY A. DREER

714 Chestnut Street,

PHILADELPHIA, PA

Some People have taken our advice as published in

these columns recently and are buying **My Maryland** for trial. We reiterate here—if it succeeds with you as it does with us, it will prove the best white carnation you ever grew. Despite the variety's apparent failure in several places, we strongly advise all growers to give it a trial. We have been frank about its faults as developed in other places. We doubt if these will develop in many places.

Jessica we believe, will succeed generally and will prove to be the best red and white variegated ever disseminated. Few varieties show as strong constitution as this one does and it is a wonderful producer. Extra fine stock of both varieties ready now. R. C., \$2.50 per doz.; \$12.00 per 100, \$100.00 per 1000. Pot plants, \$3.00 per 100 extra.

Send for our catalog, now ready.

GRAFTED ROSES

KILLARNEY

and all of the leading varieties. One hundred and thirty-six thousand rose plants grafted this year. Read our list:

Grafted Stock. From 2 1/4 Inch Pots.

KILLARNEY. \$15.00 per 100; \$120.00 per 1,000.

Richmond. \$25.00 per 100; \$200.00 per 1,000.

Rosalind Orr English. \$20.00 per 100; \$150.00 per 1,000.

Etoile De France. \$20.00 per 100.

Wellesley. \$20.00 per 100; \$150.00 per 1,000.

Liberty. \$20.00 per 100, regardless of number ordered.

The above varieties on their own roots, from 2 1/4 inch pots, very fine plants, repotted from 2 inch pots.

Killarney. \$10.00 per 100; \$90.00 per 1,000.

Richmond. \$15.00 per 100; \$120.00 per 1,000.

Wellesley. \$10.00 per 100; \$90.00 per 1,000.

Rosalind Orr English. \$10.00 per 100; \$90.00 per 1,000.

Laman Cochet. A magnificent pink rose of Mermet type, and the best of our out door bedders, \$15.00 per 100.

RICHMOND

Standard Varieties Grafted.

Ivory. Franz Deegen. Bridesmaid. Souvenir du President Carnot.

Bride. Kaiserin Augusta Victoria. Madam Hoste. Madame

Caroline Testout. Meteor. La Detroit. Golden Gate. Mrs.

Pierpont Morgan. Madame Abel Chateau. Grafted from 2 1/4 inch

pots, \$15.00 per 100; \$120.00 per 1,000; for A No. 1 stock; nothing else

will be sent out. The above varieties on their own roots, from 2 1/4 inch

pots, \$5.00 per 100; \$45.00 per 1,000.

American Beauty. On own roots, from 2 1/4 inch pots, \$8.00 per 100; \$75.00

per 1,000. 3 inch pots, \$12.00 per 100; \$100.00 per 1,000; April, May and

June deliveries.

Mr. Norbert Levavasseur (The Baby Rambler). An ever-blooming

dwarf Crimson Rambler. We will furnish May delivery plants of this sen-

sational rose from 2 1/4 inch pots, at \$2.75 per dozen; \$17.50 per 100; \$42.50 per 250.

Scillas

The genus *Scilla* has about eighty species and their homes are in the temperate parts of Europe, Asia and Africa. Many of the species are not common in cultivation. Some are quite hardy while others require the protection of a cool greenhouse.

This short story will only enumerate some of the best hardy kinds. Their culture is very simple, requiring a light, rich soil and thriving in full sun or in a partially shady position. Plant in the fall when the bulbs are at rest placing them in the soil to a depth of about four to six inches. When once planted they do so much better if not disturbed for several years. They are pleasing subjects for the margin of the hardy plant border, and few plants are more satisfactory when they are properly placed than colonies of these in the rock garden. Some of the species are excellent for naturalizing in the grass.

The Siberian squill, *Scilla sibirica*, is one of our earliest spring flowers and it is certainly a gem. What would we do in early spring without its sheets of porcelain blue? It makes a fitting companion to the snowdrops and crocuses which all flower about the same time. We ought to adore these dwarf messengers who have come through frost and snow to tell us their story that dreary winter is almost gone and that spring is once more at hand. The first crocus, the first snowdrop, the first squill and the first dandelion are always greeted with exclamatory expressions. Often have I thought and wondered where and how have these children of the snow accumulated heat out of the cold earth to make them send forth their leaves and flowers while mostly all other plants are sleeping contentedly and waiting for more propitious weather. Early spring-flowering plants and late fall-flowering plants have unquestionably attributes which ought to put them in the first rank amongst hardy plants.

We have a white variety of the Siberian squill but it is not as vigorous or floriferous as the species. However, for variety's sake it is worth having in a collection.

Scilla bifolia is not as common or yet as showy as the Siberian squill. It attains about the same height and requires the same cultural conditions. The Spanish squill, *Scilla hispanica*, is an old garden plant and has been in cultivation for a very long time. However, although it is antiquated it is not over planted in this country yet. The photograph shows the handsome plant it makes in an ordinary hardy border. It produces a good crop of flowers right through the month of May, beginning to flower earlier in warm sheltered positions than it does in less congenial quarters. The flowers are produced gracefully above the dense green foliage and makes an imposing plant when several bulbs are planted together. If it receives liberal treatment its flower stems will attain a height of from twelve to fifteen

inches. It is the finest of the blue flowers we have in early May. There are several varieties of this plant; one which is very good has white flowers; *carnea* has flesh-colored and *rosea* has rose-colored flowers. In the rock garden it shows to good advantage and is not particular either, doing well in full sun or partial shade.

The common blue-bell, *Scilla festalis*, is a very common plant in England, but is not grown very much here although it is quite hardy. It is lovely when naturalized and there is no reason why it should not be planted plentifully as the bulbs are inexpensive. The flowers are produced well above the foliage and are arranged in a drooping fashion on one side of the flower stem. It is pleasing in tufts on the margin of the border and also gives fine effects in the rockery. This species has also many varieties in different shades of color.

There are several other varieties but these are the most satisfactory in our gardens.

Robert Lamer

Cattleya Schroederæ Hercules

We are indebted to Messrs. Lager & Hurrell, of Summit, N. J., for the photograph of the elegant cattleya which furnishes our frontispiece for this issue. The flower measures over eight inches in diameter. The form is simply perfect. Sepals and petals are white and, unlike the type, are of a firm, waxy texture which makes the flowers stand out boldly. The disc of the lip is bright orange-yellow, surrounded by a zone of white almost imperceptibly suffused with pale lavender. It is declared to be the grandest and in all respects most nearly perfect *Cattleya Schroederæ* ever shown.

Theories and Facts in Plant Breeding

In the issue of HORTICULTURE for April 21st, 1906, there is an article entitled "The Real Inwardness of Hybridizing," by N. B. White. This contains many statements which are very loose and very inaccurate, especially for one, who, avowedly, by word and by title, gives the impression that he is stating the scientist's point of view. Not only this, but the article summarizes two laws in a manner both absurd and incorrect. These laws have been deduced from recorded experiments, carefully tabulated and studied; they have been given out by biologists as attempts at expressing the truth, and as attempts "to declare the course of heredity under given conditions." They are interesting, historically as showing the development of methods, work and theories; they are useful practically in direct proportion as they enable us to predict of our attempt at hybridizing and cross-breeding.

The Galton law, amended by Pearson, is of little value to practical men and is somewhat as crudely stated by Mr. White. The Mendel law promises to be of great value, though still under heavy fire of discussion and experiment and an absolutely definite statement that it "is a great boon to breeders" can not be safely made now. However, these experiments are giving much which in time may prove the law to be the great desideratum for which we are all seeking.

In 1901, in its Journal, The Royal Horticultural Society of England published a translation of Mendel's own paper describing his experiments. This was made by Professor W. Bateson of Cambridge University and is, so far as I know, the first publication of this paper in English. Nowhere in this or in subsequent papers could any statements be found which would lead to such a change of breed in poultry as Mr. White describes, nor could Mendel find in this description any trace of his theory. Mr. White in his version of Mendel's law supposes "the purity of parents, hence, the purity of germ cells." Does it take a law deduced by hard labor, both mental and physical, as Mendel's law was, to predict that if two pure individuals be bred together their offspring will be pure? How could it be otherwise. Such a statement is adding insult to injury. The conception of "the purity of parents" is not only untenable but unthinkable, unless we throw away our basal theory of evolution and accept that of special creation, when, I grant, the individuals, fresh from the workshop of the creator would be pure. But in how few generations would such a mixture come into existence as would make Mr. White's head swim.

Mendel experimented on a number of varieties of plants, choosing those characters which contrasted markedly and which could not be open to questions when results were to be given out, and which could be readily recognized. By common consent those experiments on the ordinary garden pea have become classic. In the tabulation of the results of his experiments, Mendel found that there was a marked difference in the inheritance of two contrasting characters, in a definite number of experiments each appeared in a definite proportion and ratio. That character which appeared the more often was called a "dominant character," that

appearing less often was called a "recessive character" and together we have deduced the conception of "unit character." Selecting at random three of Mendel's own illustrations from his pea experiments we have:

1. The shape of the ripe seed, whether round and smooth or angular and wrinkled.
2. Shape of the seed pod, whether simply inflated or deeply constricted between the seeds.
3. Length of stem, whether the plant is giant or dwarf.

The tabulations show that the round smooth seeds, the simply inflated pods and the giant stems are the dominant characters of these three pairs of Mendelian characters. The dominants and recessives appear in the proportion of 3:1. This is the first tenet of Mendel's law; the second is that the germ cell is pure, that is that it carries either the dominant or recessive character of any given pair of contrasted characters, but never both, a perfectly tenable and thinkable position, for a pea could not be both smooth and wrinkled, its pod could not be both inflated and constricted nor could its stem be both dwarf and giant.

The following statement of the law is Mr. Bateson's; it is not rough and it has one strong recommendation, Mendel would recognize it if he were to read it. It is taken from the Royal Horticultural Society's Journal, already referred to. "The conclusion which stands out as the chief result of Mendel's admirable experiments is of course the proof that in respect of certain pairs of differentiating characters the germ cells of a hybrid or cross bred are pure, being carriers and transmitters of either one character or other, not both. That he succeeded in demonstrating this law for simple cases with which he worked it is scarcely possible to doubt.

"In so far as Mendel's law applies, therefore, the conclusion is forced upon us that a living organism is a complex of characters, of which some, at least, are dissociable and are capable of being replaced by others. We thus reach the conception of unit characters, which may be rearranged in the formation of the reproductive cells."

It will indeed be the millennium when we can analyze the pollen cells and the ovules and read their characters, that will be of vast help to practical plant breeders, for of course, we will then be able to revitalize these sources of life after we have killed and fixed them preparatory to our examination; and then, each and every other pollen grain or ovule will carry with it its own recommendation. Let us hope that they will be more truthful than the majority of recommendations which one gets. Let Mr. White examine a little into the intricacies of these cells which he so glibly plans to read as a phrenologist reads one's head and discover how difficult it is to understand in a small measure the plain physical structure and how many years and how much labor have been spent upon gaining the small store of knowledge we now have in this direction.

The closing statement is a marvellous finale to Mr. White's article. I would ask him to compare it with his opening statements, and then tell me what its point is.

Ann Dorrancey

Dorrancey, Pa.

British Horticulture

A WELL DESERVED HONOR.

Mr. Edwin Beckett is the latest recipient of the Victoria Medal of Honor awarded by the Royal Horticultural Society. The number of these awards is limited to 63, and they are given to horticulturists who have distinguished themselves in some special department. Mr. Beckett's record is one of which any man may feel proud. Commencing with the advantage of inheriting a love of gardening from his father and grandfather, he early in life displayed an aptitude for the profession he now adorns, for he became a foreman at the age of 17. In 1884 he secured the charge of the magnificent gardens at Aldenham House, Elstree, the seat of Lord Aldenham, and he continues in that important position. Some extensive work in remodelling the gardens has been carried out during Mr. Beckett's tenure of office. Mr. Beckett is known far and wide as an exhibitor. He formerly showed chrysanthemums, and exhibiting 52 "twenty-fives" in various parts of the country he was only beaten twice. As an exhibitor of vegetables Mr. Beckett holds a premier position. He has secured the first prize at nearly every show at which he has exhibited, including several gold medals received from the Royal Horticultural Society. His practical knowledge of this section of horticulture has been embodied in a well-known work entitled "Vegetable Culture." Mr. Beckett's name is further perpetuated by the cup and tube which he has invented for exhibiting chrysanthemums.

A MAN OF MANY PARTS.

One of the busiest men in the horticultural world is Mr. Walter P. Wright. One day I encounter him organizing the annual show of the National Potato Society, of which he was the founder, then as a judge at a leading show, later touring in Kent, where he acts as horticultural superintendent and lecturer. The next morning I receive enlightenment from the horticultural weekly Mr. Wright edits, relaxation from a gardening story he has published, and knowledge from a useful dictionary he has supervised. Mr. Wright has now been appointed superintendent and lecturer of the horticultural department at the South Eastern College, at Wye. I have pleasant recollections of a delightful day spent at Mr. Wright's old-world Kentish home, whose placidity is in striking contrast to the strenuous life of its owner. Here Mr. Wright occupies his limited leisure by filling a parochial appointment. In my many chats I have not yet found the secret of his marvellous out-put—apparently he has discovered some method of dispensing with sleep, except when he travels to and from London. There is a great deal in heredity. Mr. Wright's father is well known as a horticultural lec-

turer and writer, whilst his brother has rendered yeoman service as the secretary of the National Sweet Peas Society. Besides the work already enumerated, Mr. Wright is acting as secretary to a horticultural education association formed of the county instructors in gardening.

GARDENERS COMBINE.

In using this heading I do not wish to imply that British gardeners are now seeking to make a "corner" of their labor. The British Gardeners' Association, the members of which are about to hold their annual meeting, now numbers nearly 1000 members in various parts of the country. The association was formed with the laudable object of improving the status of the gardeners. Whilst for many years there have been organizations which have provided benevolent funds for gardeners, until recently there was no combination for the journeyman's advancement. The association will serve a useful purpose in giving a better standing to competent men, and in protecting employers against men who are not qualified to hold a position. There is now a register containing the names of capable men who are seeking appointments. Gardeners in nurseries and private establishments are qualified for membership. There is no intention to make it a trades union, for that form of combination has many objectionable features, and would receive the vigorous opposition of employers. In gardening work there cannot be the same regulation of hours and a uniform standard of wages as are governed by the unions of many trades, for the conditions of the work are so totally different. The new association has made a good start and should fill a very useful part in the gardening world.

W. H. Gelssett.

The cut flower trade and the Greek

The plaint which comes from one of our western correspondents anent Greek competition in the flower trade is one which, sooner or later, is sure to come from every community where a surplus stock is in evidence. The Greek or other "curbstone merchant" (they are not all Greeks) thrives on the surplus. The remedy lies at the foundation; either curtail the production by restricting greenhouse extension or make other disposal of it, destroying it or shipping it elsewhere. Neither of these courses has any fixed practicability. The situation and its annoying perplexities are easily understood but the flower trade has no monopoly on it for the problem of "ruinous competition" is as old as business and is likely to continue to the end. We might mention in passing that the grower is losing no sleep on the Greek question.

Two important measures

Among the most important measures on which action by Congress is called for are the parcels post bill and the appropriation of three million dollars for the creation of forest reserves in the water sheds of the Appalachian and White mountains. Both of these projects should appeal strongly to every friend of horticulture, the first because it furnishes a much-needed means for the delivery of seeds, plants, flowers, etc., at small cost and provides a safeguard against extortion by express companies, and the second, not only for utilitarian reasons which are now generally well understood but also for æsthetic considerations—the rescuing from destruction of a small remnant of our forests of noble trees and the practical recognition of that beauty and sublimity of landscape which is the basis of all our out-door decorative work. It will be a matter of but a few minutes for each one of our readers to write to his senator and representative asking him to support these two measures. Do it now.

A promising outlook for the gardener

Considering the long hours of employment, the experience, intelligent skill, and unremitting attention demanded, we believe that gardeners, whether employed in a commercial or private capacity, are among the most poorly paid

workers on this continent. Florists' clerks—that is, in city stores—receive salaries much larger than the pay of the average grower. One reason advanced in explanation of the inadequate compensation received by expert greenhouse and garden workers as a rule is the constant influx of gardeners from foreign countries who, unmindful of the greater cost of living in this country, eagerly accept wages which appear to them large as compared with what they have been receiving hitherto. It is from this foreign-born element that the majority of our best gardeners have come. Well-trained American-born experts have been out of the question, partly because of the characteristic indisposition to give necessary time to thorough training, but largely because the outlook for future emolument was so disproportionate. We think we see signs of a change now. The future of horticulture in this country has taken on a different aspect within a few years. Sons of men who have achieved success in commercial horticulture are staying in the business instead of deserting it. Note the appearance of the young men shown in our picture of last week of the graduating class in horticulture at Amherst College. Do they look like "\$1,000 a year" men? These are some of the influences to which we may confidently look for an uplifting and dignifying of the gardeners' calling. The outlook grows hopeful.

Some park attractions of the week

The landscape presents nothing more beautiful in the parks and parkways of Boston at the present time than the dogwoods (*Cornus florida*) which Mr. Pettigrew has planted by the thousand along the borders of the woods. The pink variety is especially striking and is easily the finest of our spring flowering trees. Unfortunately it frequently fails to carry its flower buds through the winter and it is several years since we have had a display equal to that of the present week. The azalea plantations are beginning to show color, *Rhododendron Vaseyii* being already in full bloom with the ghents and nudiflora following closely. The evergreen rhododendrons have come through the winter carrying all their buds uninjured and will make a gorgeous show in about two weeks. The forsythias have been finer than ever before but they as well as most of the pyruses have already passed and the lilacs, *Loniceras*, *berberises* and early *viburnums* have taken their place as objects of interest. One of the prettiest of the uncommon things in the arboretum is *Cercis canadensis alba*. It is truly a beautiful tree. The *exochordas* have done poorly this season—a very common failing in this section which is much to be regretted for no spring flowering tree can be lovelier than a well-bloomed *exochorda*. At Swan Point Cemetery in Providence, R. I., they are usually to be seen at their best. Rugosas and other early roses are beginning to open their flowers. Thus the beauteous procession advances each day opening up some new object to admire. This is one of the great charms of these shrubbery plantations.

AFTER ADJOURNMENT.

Those of our readers who have had trouble with old-fashioned putty because it gets too hard or with soft putty which is apt to peel from the wood after a year or two, may like to try the following composition which J. B. Shurtleff, Jr., of Revere, Mass., tells us he has used with invariably good results. It is simply a quarter pound of beeswax to two quarts of oil, heated and mixed and applied with a putty bulb. Mr. Shurtleff has used this as a substitute for putty on hot bed sash and greenhouse roofs and finds it superior to anything else, after a trial of several years.

A correspondent of the *Gardeners' Chronicle*, in issue of April 28, has something to say in favor of ramie fibre as a material with a great future in the line of clothing, and instances its extensive use in China and South Africa as an article of wearing apparel. We shall not mention any names but have in mind an estimable gentleman in Washington who, a few years ago, became so enthusiastic a supporter of ramie culture for this purpose that he had a suit of clothing made from the home-grown product. It worked all right and was greatly admired by the frequenters of Pennsylvania Avenue until one day a sudden rain storm came up and then trouble began, for the material when wet proved to be not only clinging but transparent and our friend was forced to take refuge in a nearby shop and send home for a suit of clothes. In China and South Africa this trifling peculiarity of ramie wouldn't count.

We have been reading with considerable interest and not a little amusement the witty description of a visit to the Royal Academy by a correspondent of the *Gardeners' Chronicle*, issue of May 12. From our knowledge of the fearful and wonderful creations of some of the flower painters and engravers on this side of the Atlantic we are inclined to utter a responsive amen to the incisive criticisms our contemporary makes concerning the pictures on exhibition. We clip a few extracts:

It is far better to exhibit no flower, fruit or garden subjects than to deface the walls with crude suggestions or "impressions" of nothing. "Impressions" are sometimes very well from masters of art, but we are nowadays far too often favored with "impressions" from ladies and gentlemen who have no foundation knowledge and so have nothing to impress.

441. Autumn Garden, Bavaria (Orrin Peck): An unusually large picture, with large, life-size cabbages in the foreground; it is easier to plant cabbages than Lilies.

741. The Blessing of the Plants, Santa Barbara, California (Orrin Peck): This represents monks sprinkling pot-flowers of unknown species with holy water. The ecclesiastic who holds the holy water is kneeling.

756. Her First Communion (Mary F. Raphael): This represents a girl clad in white, with her face veiled; the veil, like darkness or fog, comes in conveniently. The maid is surrounded with what are possibly meant for white Lilies; we are uncertain.

485. Fleur-de-Lis, a lady in white (G. A. Storey, A.): The lady is accompanied by Lilies and Begonias of forms unknown to the writer. Similar unusual varieties of plants occur in the same artist's 493, Leda.

566. Stocks (John Gray): We have never seen stocks like these either in form or color.

There are flowers in 395, The Market Place (Edith J. Sealy), but one cannot properly see the picture, which is close

SPRAYING DEMONSTRATION AT AMHERST.

The spraying demonstration at the Massachusetts Agricultural College on May 17, was a success, notwithstanding the rain which set in at starting time. The following program was carried out:

1. Traction sprayers.
2. Power sprayers.
3. Hand sprayers (barrel pumps).
4. Bordeaux mixture (making).
5. Lime-sulphur solution (making).

There was a good attendance.

to the floor, without doubling one's self up like an acrobat, and this feat we were unable to accomplish.

In 267, Mand, the Daughter of George Coats, Esq., visitors may note how Mr. Sargent polishes off Roses; there are two white Roses on the lady's neck, and a third elsewhere.

OBITUARY.

George H. Rowden died suddenly at his home in Wallingford, Conn., on the evening of May 17. His death was due to heart disease.

Mr. Rowden was born in Salisbury, England, October 10, 1840, where he attended school until he was fourteen. He left school at that age to learn flour milling in Amport, serving at that trade until he was nineteen.

During the next three years he served an apprenticeship as florist and gardener on the estate of Earl Radnor at Coleshill, under Henry Eckford, of sweet pea fame, and in the nurseries in Upper Clapton on the border of London. For two years following he had charge of the gardens of Colonel Boxendale in Wetstone. The next three years he had charge of the gardens of Sir Granville Smith in Ashton court, near Bristol.

In March, 1867, he came to America and went to Torrington, Connecticut, where he did landscape gardening for one year. In 1868 he went to work for Edward Miller, of Meriden, laying out and grading the extensive grounds of the latter on South Broad street in that city. He remained in the employ of Mr. Miller for two years and then moved to Chambersburg, Penn., where he was manager of the Chambersburg nurseries for three years. At the conclusion of his labors there he returned to Meriden to resume work for Mr. Miller, where he remained for eleven years, making a total service of thirteen years in the employ of Mr. Miller.

In May, 1884, he moved to Walling-

ford and in partnership with William Woodley, of Meriden, bought the greenhouses that were owned at that time by Henry Wallace on Academy street. At the end of about three years Mr. Royden bought out the interests of Mr. Woodley.

He was a member of the Society of American Florists and at one time was its state vice-president. He is survived by a widow, three daughters, and a son.

A well-known British nurseryman passed away on May 7th in the person of Mr. John Barron, head of the firm of Messrs. William Barron and Son, of the Elvaston Nurseries, Borrowash, Derbyshire. The firm which was founded by the deceased's father, had been in existence for over half a century. Besides having a nursery of about ninety acres, the firm have a very high reputation as landscape gardeners. The founder of the firm invented a machine for transplanting trees, and this has been extensively used in different parts of the country. Deceased was in partnership with his son Mr. W. Barron, who had charge of the landscape department. At the interment, a large attendance of residents testified to the high esteem in which deceased was held. W. H. A.

The death of William Schray on May 15, removes from the ranks one of the oldest florists in St. Louis. Mr. Schray was 72 years old. He was a member of the Society of American Florists.

William R. Watson of Pittsburg, Pa., who for many years has spent the winter in the South, died at El Paso, Texas, aged 38. A mother and sister survive him.

A. J. Ross of the Ross Seed Company died at Louisville Ky., on May 8.

NEWS OF THE CLUBS AND SOCIETIES.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Outdoor Exhibition at Dayton.

Growers and introducers of novelties in cannas, asters, geraniums, petunias, roses, and other tender or hardy garden material should not underestimate the value of the opportunity afforded in the plans as formulated by the executive board of the S. A. F. for displaying and introducing to the public such meritorious new things as they may have to offer.

The county fair follows directly after the close of the S. A. F. convention and the large local attendance should and doubtless will bring good business to the exhibitors. One prominent grower who has taken a big space states that the proposition promises better than the planting exhibit at the World's Fair as a business getter. The catalogue mail trade houses cannot afford to overlook this opportunity.

Planting is now going on under the supervision of skilled gardeners and all exhibits will have the best of care and full protection throughout the summer. The charge for space is merely nominal.

For rates and assignment address

H. M. ALTICK, Dayton, O.,
or W. M. J. STEWART, Secretary,
11 Hamilton Place, Boston, Mass.

ELBERON HORTICULTURAL SOCIETY.

At the meeting of this society on May 7 William H. Waitt tendered his resignation as secretary on account of his removal from Elberon, and George Masson was elected to fill the vacancy. A vote of thanks was tendered Mr. Waitt for his faithful service.

The exhibits of the evening were gladioli by H. Hall; antirrhinums by A. Bauer; flowering shrubs by A. Grieb; lettuce by Fred Dettlinger. A

committee was appointed to attend to the planting of flower borders around the Oakhurst school. The exhibit for the next meeting in June will be roses and strawberries.

HORTICULTURAL SOCIETY OF NEW YORK.

The Horticultural Society of New York proposes to hold in the early Fall of 1907, an International Conference on Hardiness and Acclimatization, if there is sufficient general interest evinced to warrant organizing such a gathering. The questions proposed are of supreme importance to horticulturists, and there is very little, if any, codified matter available in this country. The proceedings of the conference would form the substance of a volume of Memoirs of this Society, to be a companion to the Proceedings of the International Conference on Plant Breeding held in 1902.

Any assistance suggesting lines for discussion, etc., will be welcomed by the secretary, Leonard Barron, 1269 Broadway, New York.

COLUMBUS FLORISTS' CLUB.

During the past two months our meetings have not been as regular or as well attended as they should have been for the good of the club. It is almost impossible to have it otherwise during the busy season—as we all have to work both day and night. Last Tuesday the regular meeting for May took place in our rooms in Iroquois Hall with a fair attendance; President Stephens and secretary McKellar were on hand and in charge of the meeting. Much regular business was transacted. Amongst other matters the committee having charge of the penny packets of flower and vegetable seeds for the public school children, reported that \$50.00 will remain as a starter for this work for 1907, after all bills have been paid. It is a good work and growing. The next meeting will be Tuesday evening, June 5.

THE AMERICAN ASSOCIATION OF PARK SUPERINTENDENTS.

The annual meeting will be held at Washington, D. C., June 12, 13, 14, 1906, headquarters to be announced later.

The program is as follows: June 12, 10 A. M., Opening session; 1 P. M., Field work; 3 P. M., Business meeting, papers and discussion.

June 13, 9 A. M., Field work; 3 P. M., Business meeting, papers and discussion.

June 14, 9 A. M., Field work.

The papers to be read are by Messrs. Pettigrew, Dawson, Brown and Parker.

If a reasonable number of members can remain, a visit to the Baltimore Park System may be arranged for June 15. A more complete program will be mailed early in June.

J. W. DUNCAN,
Secretary-Treasurer.

PEONY NIGHT AT PHILADELPHIA.

The next regular monthly meeting of the Florists' Club of Philadelphia will be held Tuesday evening, June 5, 1906, when there will be an exhibition of peonies. Everybody is invited to send flowers for this event. All intending exhibitors will please forward flowers, express charges prepaid, in care of Mr. David Rust, Horticultural Hall, Broad Street, above Spruce, Philadelphia, Pa.

C. Betscher, of Canal Dover; Edward Swayne, of Wawaset, and Henry A. Dreer, of Riverton, have promised, among others, to send a good exhibit of named varieties, so that the members can have an opportunity of sizing up the good and bad points of the different sorts.

EDWIN LONSDALE, Sec.

AMERICAN PEONY SOCIETY.

The date of the annual meeting and exhibition of this society at Boston, has been changed to Friday and Saturday, June 15 and 16.

DIAGRAMS OF EXHIBITION HALL FOR DAYTON CONVENTION OF S. A. F., AUGUST 21-24, 1906.

WHY NOT BE UP TO DATE

and grow a few Orchids? You will have to sooner or later and might as well start now at the beginning of the growing season,

AND GET RETURNS NEXT FALL.

We have received a second shipment of **CATTLEYA TRIANAE** which our friends tell us is THE FINEST THEY EVER SAW.

Also, a good importation of **C. LABIATA.**

WILL ARRIVE IN ONE WEEK'S TIME,

CATTLEYA GIGAS, HARDYANA TYPE, C. MENDELLI AND C. SCHROEDERAE.

Write for our Price List before buying elsewhere. It will interest you.

CARRILLO & BALDWIN, Orchid Growers and Importers, Secaucus, N. J.

DETROIT FLORISTS' CLUB.

The Detroit Florists' held their regular meeting on the 17th, many vacant chairs being present. The convention at Dayton was discussed and a joyful time is being planned. There seems to be quite a number intending to go on this trip and a special coach is being talked of.

A sample string of the new *Asparagus plumosus* *Crawshawii* grown by James Crawshaw of Providence, R. I., and sent to the club by him, was pronounced a very useful novelty. A pleasant evening is promised those who attend the next meeting. Besides the discussion of Decoration Day business there will be a smoker.

CLUB AND SOCIETY NOTES.

At the June meeting of the New Jersey Horticultural Society Harry O. May will be the speaker, his theme, "Roses and Rose Growers."

The Utica Florists' Club (N. Y.), at their meeting on May 2, elected the following officers: President, F. J. Baker; vice-president, Seward Hanks, Iliou; treasurer, C. F. Seitzer; secretary, J. C. Spencer.

PERSONAL.

Harry Pickwith of Detroit, plans a trip to Europe the latter part of June and will spend about five weeks on the other side.

President Dilger of the Detroit Florists' Club, suffers from an injury to his leg, the result of an automobile accident.

Mr. and Mrs. Hugh Dickson of Belfast, Ireland, are due to arrive on this side of the water, June 10th. While in Philadelphia they will be the guests of W. Atlee Burpee and Alexander B. Scott.

Orchids

Orchids

Now is the time to buy the following imported orchids

CATTLEYA MOSSIAE. We have nearly 5,000 plants on hand in superb condition. These if potted now will produce a crop of flowers next Spring that will pay for the total outlay and leave a margin besides.

C. PERCIVALIANA. If potted now will flower in December this year, just when orchid flowers are scarce and in great demand.

We have also **CATTLEYA GIGAS, C. Speciosissima, C. Eldorado, C. Superba, etc., etc.,** all in large quantities, and they must be sold.

BUSINESS CHANGES.

Weiland & Olinger, formerly located at Cincinnati, have opened a store at 310 Sixth street, Louisville, Ky., which will be devoted to wholesale business.

John J. Perkins, Jr., has gone into partnership with his father at 115 West 30th street, New York, and the business will be done hereafter in the name of John J. Perkins & Son.

Some large landscape gardening contracts have recently been executed, at Columbus, Ohio, by Thomas Meehan & Sons, Inc., of Philadelphia, Pa. Leonard Morse has been in charge of the work.

The Howland greenhouses at Holeyoke, Mass., which have been under lease by Fields & Sinclair for some

months, have been bought outright by Mr. Sinclair. Mr. Fields will continue to be associated with Mr. Sinclair in the business and M. L. Graves will be retained as manager. The property includes about 31,000 feet of land and is considered a good investment. The Prospect street greenhouses in Northampton, Mass., are also occupied by this enterprising firm.

George W. Cable, who is president of the Home Culture Club Association of Northampton, Mass., announced at the meeting of the board of directors of the association that Andrew Carnegie has offered the association \$8,500 to establish a "garden under glass," provided \$1,000 is raised for the care of the "garden" annually.

PHILADELPHIA NOTES.

Edgar T. Scott of Landsdowne is building a new rose house in addition to the already extensive range of glass on the estate. Arthur Mallon is now the gardener succeeding Joseph McGregor, retired.

Paul Berkowitz of the H. Bayersdorfer Company is much pleased with the interest taken all over the country in the new "Twentieth Century" plant stand which his firm is now putting on the market. This is really a marvel of adaptability. We predict that inside of a very short time every first-class florist in the country will have it in use.

We hear that Edwin Lonsdale has been commissioned to go to Erie in an advisory capacity in landscape work on the Soldier's Home at Erie. This is a development of the good work Mr. Lonsdale has been doing at Girard College the past two years. Of course this is only a side issue and he will return to his regular duties about the middle of June.

FIRE RECORD.

The Limprecht Florist Supply Co. of New York City, were the victims of a fire on May 12, in which they lost severely but are well covered by insurance.

The persistent barking of his little dog aroused John Roper of Madison, N. J., from his slumbers in the early morning to find his greenhouses in flames. His house is attached to the greenhouses. The damage is heavy and it is stated there is no insurance.

PUBLICATIONS RECEIVED.

The Report of the Park Commissioners of Haverhill, Mass., contains a fine portrait of the late Dudley Porter, chairman of the board of park commissioners.

== BUT ==

**IT IS THE PLANT STAND YOU WILL
EVENTUALLY BUY**

THE TWENTIETH CENTURY

Showing how plant can be placed at any height or angle on the new 20th century adjustable plant stand.

Showing the new 20th century adjustable plant stand in its natural position ready for use.

Showing the new 20th century adjustable plant stand folded in compact form for easy and economical shipment.

A new adjustable plant stand, elegant in appearance and absolutely adjustable to any height or angle that may be required in decorations. The stem can be raised out of the hollow steel tube to any required height up to double; the base of the stem is on roller bearings and can be turned around to any point by a touch of the finger; the legs have rubber feet and cannot scratch the most elegant floor; the top or holder is movable and can be set to any angle desirable and can be adjusted to any size pot up to 12 inches in diameter.

We have no hesitation in pronouncing this the best stand on the market today and one which every florist who has decorative work must have. True, it is not cheap, but it is reasonable in price and will pay for itself twice over in short order.

Send for a sample when you place your next order.

HOUSE OF AMERICA
56 North 4th Street, PHILA.

AN OLD PROBLEM IN A NEW DRESS.

What is to be done with the Greek fakir? Are the florists going to continue to allow foreigners, ignorant of the details of their trade, to undersell cut flowers, and thus rob them of their rightful customers? They have already established a precedence in the confectionery business, and are now handling cut flowers and plants in large quantities, both in stores and on the streets. If these gentlemen from sunny Greece would buy at regular market prices and sell at regular retail prices, they might be accepted in good standing, but it is a well-known fact that the methods which they employ are anything but business-like, and are bound to hurt trade in one way or another.

It is next to impossible to obtain any accommodation whatever from these people, and any kind of a deal with them is sure to be a "skin game" of some sort. We know that ours is not the only city, nor are we the only florists who are annoyed by this nuisance (we know, personally, of immense profits on the streets of a large city five hundred miles from here—profits rightfully belonging to the experienced and intelligent florist), but we have the interests of the trade at heart and are anxious to do what we can to help it along.

Are we going to stand quietly by and watch these swarthy foreigners take a goodly piece out of our business, or are we going to close in on them and make them do as Americans do while they are on American soil, and handling American products?

GRACE HOOVER.

Minneapolis.

NEWS NOTES.

F. S. Pearson of Great Barrington, Mass., contemplates building several houses at Edgewood Farm for the cultivation of grapes and peaches.

The Holly-Castle Company have extended their business to include piping, heating, remodeling and building greenhouses. They move on June 1 from 49 Federal street to more commodious offices at 170 Summer street, Boston.

James L. Montgomery, superintendent of parks of Cambridge, Mass., has been removed by the park commissioners. No cause other than political is given. John F. Donnelly, for many years assistant city forester, has been appointed acting superintendent.

David Andrews has disposed of his greenhouses near Plantsville, Ct., to Oleson & Lunden who will use them for their wholesale business and place them in charge of William Fischer. The Bristol street houses will be retained for their retail trade. Mr. Andrews expects to go to Vermont.

Up to the present time of writing the greenhouses heating firms in New York have their pipe fitters and helpers locked out, and there is no sign of a settlement in sight. William H. Lutton of Jersey City informs us that he is the only one that has signed the agreement and at present has quite a number of men employed. Among the heating contracts that Mr. Lutton has on hand is that of Mr. J. Stoppani's range at Bayport, Long Island.

Florist of

PHILADELPHIA

1608 to 1618 LUDLOW STREET. Store Closes at 8 p. m.

CUT FLOWER MARKET REPORTS

BOSTON This market is fairly flooded with flowers, for which there is absolutely no sale. Roses and carnations come in by the thousands, averaging excellent quality, with a fraction of mildewed ones among the stocks that have been overworked through the winter. Out of town buyers are inquiring for Decoration Day prices and are ready to place orders at cut rates, but hold off on quotations that touch on past records. For the present nothing is wanted by buyers, everyone being himself encumbered with more material than he can find a market for. It is a long time since the wholesale flower trade was so completely demoralized in Boston as it is at present. The warm weather of last week is partially responsible. Out-door lily of the valley is beginning to come in heavily.

BUFFALO The fine weather of the past week brought out the shoppers and many bargains were had in the line of cut flowers and plants. The department stores did a flourishing business selling roses in quantity and at low prices. Roses of ordinary quality have been hard to move at any price. It looked as if the coolers would have to be enlarged to hold the enormous supply that has been had the past month. Select Bridesmaids, Brides, Kaiserins, Liberties and Richmonds need little urging to make sales. Prime Beauties are in good supply but at times the ice boxes are also filled to their capacity and consequently they are jobbed off far below the list price. Cool weather for a few days caused the carnation supply to shorten and prices held firm. Good demand was had on lily of the valley and sweet peas, especially the latter in colors of lavender and white. Southern peonies arriving in good shape were also on the list and sold well in colors of pink and white. Harrisii lilies, and callas slacked up considerable and have again moved up to a fair price with demand good. Green goods are in better supply, demand moderate. When the schools close the summer exodus will become more noticeable, and until that time there will be a continuous program of social affairs for the bride and graduate. The outlook for Memorial Day seems bright and a record breaking business is expected.

CHICAGO The business for this week, while not moving with big strides, has been going at a rather steady pace. Stock in all grades is abundant. Roses and carnations have as good color as might be expected for this time of the year. Lilies are to be seen here and there, some large and some small. But the demand for the present, is more for outdoor stock, sweet peas,

lilacs, spirea and snowballs being especially popular. The color and quality in the above mentioned stock is very good, sweet peas and lilacs particularly, and the prices meet with the approval of everyone. A good supply of greenings is to be had from all the wholesalers.

COLUMBUS Since the weather has come warm again, trade has resumed a

good volume, but nothing like what it was before the freeze of May 6 to 9. Of course all kinds of bedding plants are now selling in good quantities, but that, at this season is expected; trade is not what it would have been had the month not been interrupted by the unseasonable cold weather. Since the freeze customers have been shy and ordered very carefully; we shall sell a lot of plants yet, and Decoration Day trade will be heavy, but the snap and dash of the season's business is over. There has been lively competition in bedding plants; prices have settled to the following: Geraniums \$1.00; coleus 40 cents; salvias 60 cents; moonvines \$1.00; verbenas 50 cents; cannas \$1.00; asters 20 cents; and cosmos 40 cents a dozen. Wire hanging baskets are in good demand and when attractively filled with bright plants, vincas, and ferns, bring \$1.00 to \$3.00 each for 10 to 18 inch diameter sizes. The trade in cut flowers has held up well, all our florists having had a very good week; large quantities of outdoor stuff, such as snow balls, irises, etc., help out on school bouquets and other work where low prices must be made. The weather is now warm and settled, but we need rain badly indeed as it is getting very dry.

INDIANAPOLIS The market although still over loaded has taken on a brighter aspect and the trade in general feels more confident of a continuance of improving conditions. Goods of all classes are offered at prices which are very tempting to the retailers. The planting season is in full sway and from all indications bedding stock is plentiful. Appearances look well for Decoration Day trade which is one of the heaviest in the cut flower line in this vicinity.

LOUISVILLE The business of the past week has been rather disappointing, particularly in cut flowers. Carnations of good quality have been sufficient to meet all demands. There has been an abundance of first-class roses, but they have not moved freely. Paeonies and sweet peas found a ready sale. Despite the constant call for lilies there has been no lack of good stock. Other flowers are in good supply.

NEW YORK The market is very dull here this week. Carnations and roses are very plentiful and both these items are away below quoted market prices when it comes to actual sales of any size. Out-door lilac is finished and lily of the valley is nearly so. Carnot roses are in abundantly. No excitement here regarding Memorial Day.

PHILADELPHIA Trading was without any special feature last week and was in slightly decreased volume. Crops generally are showing the effects of the advancing season especially in Bride, Bridesmaid, Chatenay and Killarney roses. Beauty, Richmond and Liberty do not seem to suffer so much, and carnations are still coming in in pretty fair shape. The brightest and liveliest item, however, is the peony—red, white, rose, pink and variegated; big and little, fragrant in most cases, and all very desirable. Great quantities of them are being disposed of, and there will be plenty for all demands from now until after Memorial Day. The types made us report "dark blue and light lavender" peonies on this market last week. It was iris we were talking about. We have not quite got to the dark blue peony yet. Sweet peas and lily of the valley plentiful and good.

Tamarisk plumes are a pleasing novelty in the flower market at present.

TWIN CITIES There is not much to be said of the market this week. The dark, cold weather has retarded growth in the greenhouses, and has also hindered gardening to quite an extent. Roses and carnations are fine—better than they have been at higher prices. Pansies, sweet peas, gladioli and outdoor tulips and lilacs are plentiful and sell readily. Geraniums and all kinds of bedding stuff is prime, and the supply is great enough to fill all the demands of the Twin Cities and some to spare for our brothers not so richly supplied.

TO PHILADELPHIANS

The Niessen baseball team will play their first match on the afternoon of Memorial Day. It is understood that the opposing nine will be the Smith-Craig gang. A hot game is assured. Take it in.

The Florists' Club cricket team has been augmented during the past week by two good bowlers namely, Samuel Hammond and John H. Dodds. With W. C. Smith as wicket keeper and these two sterling athletes that helps some. Come on, you fielders. Send your names in. Address

WANTED—A trustworthy, experienced foreman (unmarried) for rose and carnation establishment, 25,000 feet of glass. Near Boston. In writing give full particulars. Address D. D., care H. H. H. Co., Boston.

Here is something that concerns your

POCKET BOOK

Dorchester, Mass., May 17, 1906.
Messrs. Holly-Castle Co.

Dear Sirs:—In reply to your inquiry regarding the amount of coal consumed by my heating system I would say that I have used 56 tons costing \$327.50 during the past winter.

I used 1 ton of	Furnace	at	\$5.75
6 "	Cumberland	at	4.00
7 "	Pea	at	4.75
41 "	Egg	at	6.50
1 "	"	at	8.00

Mr. Dickerman puts the consumption last year at 75 tons of egg size. I haven't been able to get the exact figures as yet, but will endeavor to do so if possible.

If you find anything in the above letter that interests you, write to us.

HOLLY-CASTLE CO., 49 Federal Street, BOSTON

It would seem conclusive from the above figures that there has been a saving over last winter of 19 tons of coal, which, at \$6.50 per ton, makes \$123.50 saved. It has cost me \$26.00 for power to run circulator, which, deducted from \$123.50, leaves \$97.50 as the total saving on coal. Add to this the wages of a night fireman necessary on previous winters but dispensed with during last winter for four months at \$40 per month and you have a total saving of \$257.50.

You are at liberty to use this letter in any manner you desire as I have the bills and statements to back it up.

Very truly yours,
THOMAS R. MATTHEWS

FOLEY MANUFACTURING COMPANY, 471 W. 22d Street, Chicago.

The Standard Steam Trap

Certificate of merit awarded at Washington, D. C., Florists' Convention. For simplicity, durability and perfect satisfaction it has them all guessing. It is in a class by itself. To see it work a large plant as well as a small will convince the most sceptical that it is the Florists' Friend.

The Standard Ventilating Machine still leads as the most durable, easiest working and the all-around satisfactory machine.

The Duplex Gutter is gaining all the time, over 12,000 feet sold thus far this season. Catalogues free.

HOW EQUIPPED

We don't advertise ventilating apparatus or boilers, but we equip our greenhouses with just the best there is made. Our business is selling to private estates, parks, etc., U-Bar greenhouses.

U-BAR GREENHOUSES

Are the Best Greenhouses Built

because none are so adaptable to both the needs of plant life and the side of attractiveness — none adapt themselves so perfectly to any surrounding demanding lines of ornateness.

KNOW U-BAR REASONS

TO BUYERS

Patronize our advertisers, they will treat you right

The Highest Price

does not always mean the best work or materials, it sometimes means paying for a name. We believe in making the name pay you. It pays to buy from a firm whose name stands for the best — and only the best — in greenhouse building.

HITCHINGS AND CO.

GREENHOUSE DESIGNERS AND BUILDERS.

Manufacturers of Heating and Ventilating Apparatus.

1170 Broadway,

NEW YORK.

THERE'S A CHARM IN THE RIGHT LAYOUT AND WE KNOW HOW TO MAKE THE LAYOUT RIGHT

Greenhouses are not mere plant machines — a place to turn out so many blooms, so many bedding plants — they might just as well be points of ornateness, adding their own beauty to that of the grounds they beautify.

Of course, our houses are first of all practical, paying propositions, but we make them just as attractive as they are practical.

BOSTON, MASS.
Subscription, \$1.00*

. IT IS A GEM .

All the new ferns have **some** good qualities, but **only one** has **all** the good qualities. That one is

NEPHROLEPIS WHITMANI

Every frond is perfect. Never reverts to type. It grows and increases as rapidly as the old Boston. Makes a symmetrical plant in any size pot from 2 1-2 inch up. Its superiority is acknowledged by the introducers of the other forms of Boston fern. Received a unanimous report of superior merit from the Gardeners' and Florists' Club of Boston on February 20 last. The Massachusetts Horticultural Society on March 24, at their big spring show, honored it with a Silver Gilt Medal the highest award made to any of the numerous novelties exhibited.

Buy now and get the advantage of having a good stock to sell while it is yet a novelty. Orders filled strictly in rotation. Heavy advance orders are now in hand.

Prices, \$25 per 100; \$200 per 1000. 500 at 1000 rate

H. H. BARROWS & SON

WE ARE HEAD-
QUARTERS FOR

PRINCESS VIOLET STOCK

The **Princess of Wales** is still the leader of all single violets. There is no other variety on the market that can compare with it as a commercial violet because it blooms from Sept. 15th to May 1st; every bloom is marketable. It has size, it has color, it has length of stem. It has fragrance. It sells when any other variety, single or double, can not be given away. The people want it.

So great is my confidence in this violet that the following Autumn I will devote 80,000 feet of glass to the growing of this variety.

I have about 200,000 nice young divisions now ready to ship at the following prices:

\$2.00 per 100

\$15.00 per 1000

500 at 1000 Rates

Lots of 5000 at \$14.00 per 1000

Lots of 10,000 \$13.00 per 1000

Originator and Introducer

WILLOUGHBY, O.

Some People have taken our advice as published in

these columns re-ent- **My Maryland** ly and are buying for trial. We reiterate here—if it succeeds, with you as it does with us, it will prove the best white carnation you ever grew. Despite the variety's apparent failure in several places, we strongly advise all growers to give it a trial. We have been frank about its faults as developed in other places. We doubt if these will develop in many places.

Jessica we believe, will succeed generally and will prove to be the best red and white variegated ever disseminated. Few varieties show as strong constitution as this one does and it is a wonderful producer. Extra fine stock of both varieties ready now. R. C., \$2.50 per doz., \$12.00 per 100; \$100.00 per 1000. Pot plants, \$3.00 per 100 extra.

Send for our catalog, now ready.

Dwarf Peach Trees

The accompanying illustration is from a photograph of a dwarf peach tree at the height of the blossoming season. This tree is growing on St. Julien plum root. It was propagated in France. It was planted in the grounds at Massachusetts Agricultural College four years ago this spring. Since that time it has twice been killed back to the ground by the severe winters, and it has borne one full crop of fruit. This is a pretty good record I think.

There is much interest everywhere in dwarf fruit trees. In many ways the peach is one of the most attractive fruit trees for dwarfing, because it comes so early into bearing and because it is so thoroughly adapted to garden culture.

In this country it is practically impossible to get St. Julien plum for use as stocks even when it is imported from France. It does not grow well and is hard to bud. We found excellent results in dwarfing peaches by budding them on American plum or on dwarf sand cherry. They may also be budded on the common Myrobalan plum.

Naug

Echoes from England

ROSA SERICEA VAR: PTERACANTHA

(See Colored Supplement.)

Although the rose owes its universal popularity chiefly to its glorious fragrant blossoms, there is a charm and distinct beauty in the foliage of many and in the stems of some. Others again are remarkable for their fruits, even more perhaps than for their flowers. The young shoots of almost all roses are attractive, but those of the chinas and the teas are especially so. When unfolding, the tender shoots are tinged with shades of ruby red and bronze and then have a charm almost as great as when the flowers are out. Among the wild species of roses none perhaps has more beautiful leafage than *Rosa rubrifolia*, which is quite worth growing on this account alone.

Of roses whose fruits are of decorative value in the garden, the Japanese briar, *Rosa rugosa* is one of the most striking. This rose makes a large bush which in early summer is a mass of large pink or white flowers, according to the variety planted, and in late summer and autumn the flowers are followed by the large and brilliantly colored fruits. *Rosa lucida* is an excellent plant for the rock garden. Not only are the crimson berries most effective, but the glossy leafage too gives an additional beauty to the plant. *Rosa villosa* is another rose with showy fruits, which are red. White *Rosa spinosissima* and *Rosa cinnamomea* are others.

Of roses with colored stems that shown in the accompanying colored plate is undoubtedly the most striking and handsome variety yet in commerce. One can well imagine what a glorious picture in the garden might be made by a group of this rose, its large and prominent winged spines and leafage of tender green combining to produce an effect unique among roses. *Rosa sericea* is a lovely single rose from the Himalayas that is little known in gardens. A well-grown plant produces perfect wreaths of creamy white blossoms on its arching shoots. *Rosa sericea* var. *pteracantha* was first exhibited in the United Kingdom, as far as I am aware, at the great International Horticultural exhibition held in Edinburgh in September last. It was then awarded a first-class certificate. It was exhibited by Messrs. Paul & Son of Cheshunt, for Messrs. Vilmorin, Andrieux & Co. It was stated to have been raised by M. Philippe de Vilmorin. It was not in flower, but this was immaterial as it was easy to see that its value as a garden plant lay in the large winged crimson spines. These are arranged along the branches almost continuously, as may be seen by referring to the colored plate. Mr. George Paul, who had seen the rose at Les Barres, France, stated that the plant grew 8 feet or 10 feet high, and that the appearance of the arching stems with the light upon the rich crimson coloring of the spines made a remarkably fine picture. This one

can well understand from the appearance of the specimens shown at Edinburgh and afterwards in London. Such a rose as this ought to find a warm welcome from all who find beauty in stem and leaf as well as in flower.

NEW AND NOTEWORTHY PLANTS.

Cactus Dahlia, The Pilot. This beautiful new dahlia which was represented in the colored plate recently published as a supplement to *HORTICULTURE* is a flower of distinct and striking coloring, as the colored plate showed well. It was raised and exhibited by Hobbies, Ltd. In September last this firm exhibited it at the annual show of the National Dahlia Society. It was then much admired and received a first-class certificate from the society. The cactus dahlia, of which there are now very many lovely varieties, has to a large extent replaced the old show dahlias so far as garden decoration is concerned. They flower more freely and the flowers are better exposed to view than the heavy blooms of the show and fancy sorts. Even among the many beautiful sorts of cactus dahlias which have been sent out during the last few years "The Pilot" stands out as one of the most handsome. A group of this variety in the border would make a grand display in the late summer.

A NEW DOUBLE-FLOWERED LOBELIA.

The lovely double-flowered blue lobelia which was shown in the colored supplement given with *HORTICULTURE* for May 5 is a valuable plant. Many varieties of the lobelia have from time to time been sent out as being improvements upon those already in commerce. Some are recommended for their rich or distinct coloring and some for their improved habit of growth. The lobelia illustrated in the colored plate is a variety of lobelia speciosa and the beautiful sky-blue double flowers are produced very freely. Nothing can excel their delightful color and form. In the colored plate it is shown growing in a pot, and for this method of culture it is particularly well suited on account of the semi-pendent habit of growth. This characteristic enables it in a short time completely to cover the pot and produce a charming effect. It makes an excellent bedding plant as the double flowers are very lasting; in fact, it seems to bloom freely throughout summer and early autumn. On account of its semi-trailing habit of growth it may be grown in baskets.

A NEW CLIMBING ROSE.

At a meeting and exhibition held by the Royal Horticultural Society on the 15th inst., a very beautiful new climbing rose was shown by William Paul & Son. It is called Kathleen and is of the multiflora type to which many of our best rambling and climbing roses belong. This rose grows strongly and bears bunches of fairly large apple-blossom-like flowers which are a rich, soft rose in color with a lighter centre. William Paul & Son showed several plants of this rose—some 6 or 7 feet high—grown in pillar form and bearing bunches of their richly colored flowers from top to bottom. This rose has one very important characteristic which renders it valuable among single flowered climbing roses:

namely, the flowers last well. They do not fall quickly, as many single-flowered roses are apt to do. The plants exhibited by William Paul had been in bloom for three weeks already and the flower bunches still gave no sign of falling. Even by shaking the plants not a petal was made to fall.

RHODODENDRON PINK PEARL.

This is undoubtedly the finest of the pink-flowered rhododendrons hardy in this country. It is unapproached for size and beautiful coloring of the individual bloom and also for the size of the flower truss, which is magnificent. Yesterday at the exhibition of the Royal Horticultural Society Messrs. John Waterer & Sons, Ltd., Bagshot, set up a splendid group of Pink Pearl rhododendron. The plants were a feature of the show. This variety, which hitherto has been offered at rather a high price, is to be offered in the autumn at reduced prices. A new variety called White Pearl was also exhibited by Messrs. Waterer. This is virtually a white flowered form of Pink Pearl and a beautiful plant it is. It does not make such a lovely display as Pink Pearl, being a white variety, but it is nevertheless remarkable for the size of the individual bloom and the flower truss. Messrs. Waterer obtained an award of merit for a new variety called Mrs. E. C. Stirling. This rhododendron, which is quite hardy, is one of great promise; it has a very large flower truss of a lovely pale pink color.

Harry H. Thomas

The Columbines

The perennial garden or border seems incomplete unless some of the columbines are grown. They bloom early in April and others flower as late as June. Not only can they be depended on for bloom, but their hardiness is unquestioned. Though largely used for border and formal garden planting, they can hardly be omitted in a rockery. In such a situation they thrive and give plenty of bloom.

Our native variety canadensis loves a partly shaded location. The beautiful blue and violet flowers of the species vulgaris makes it much prized. Quite distinct from these two types is chrysantha, which bears a yellow flower. The true Rocky Mountain species, coerulea, has beautiful light blue sepals and white petals.

One of the very finest late introductions is the dwarf Japanese flabellata nana alba. It grows about one foot high and bears beautiful white flowers in profusion in April. The foliage is quite distinct from all the others, being glaucous-green in color and more fleshy. It is excellent for edging, as the foliage looks well the entire season.

Murray Chandler

Trachelospermum jasminoides

This plant is better known as *Rhynchospermum jasminoides*; it further enjoys like most plants an additional synonym, *Parechites jasminoides*. Synonyms are quite fashionable of recent years. Whether this sort of thing is beneficial and edifying to the craft each reader has to determine for himself.

The plant in question belongs to a small genus of four species, according to some authorities, and hails from China. It easily ranks with the choicest of greenhouse trellis plants, and no establishment of any consequence should be without one or more specimens of this exquisitely fragrant white-flowered vine. It is very accommodating and easily managed as it makes itself at home in the stove, greenhouse, cool-greenhouse, or even in a substantial pit, where it can be wintered all right. The pit or cool greenhouse treatment suits it best, as there it is more abundantly floriferous and lasts longer in flower.

One moderately large plant is sufficiently fragrant to add character and choiceness to a whole collection of flowering plants at this season of the year, provided the cool treatment has been adopted; but to realize the charming capabilities of this plant from a floral effect standpoint, a number of them must be grown and flowered at the same time; the larger the plants, as a matter of course, the grander and more imposing the show.

Any one who can recall—and that is not remote—the dozen or thereabouts of the magnificent specimen plants shown at the opening of Boston's new Horticultural Hall, commonly known as "Prof. Sargent's Show," will not, methinks, begrudge all the praise that I can bestow on it. Some of these were trained on trellises eight or more feet high, and from four feet up in diameter, completely obscuring all traces of the frame work with their ample growth and leathery dark-green leaves, surmounted with their snowy-white flowers.

If I, by thus reminding my fellow-craftsmen through the medium of your journal, can establish the true worth of this plant, to the point of stimulating a desire on their part to take up its cultivation, however limited, I will deem my mission in this connection not amiss. It can be variously used to advantage, on trellises on the roof of a greenhouse, for clothing pillars and other bare objects; but for best results on formal trellises in pots or tubs, the latter method being preferable as the plants can be shifted to any desired place at will like any other plant. When piazza decoration is in practice—and it is but few places of any importance nowadays that doesn't maintain a floral display on their piazzas at some one season of the year at least—the subject of this note is especially fitted to lend charm and grace to such floral displays.

As stated at the beginning of this note it is easily managed, not requiring any special admixtures of soil to ensure success, other than what suits most plants. In the growing season it enjoys copious watering as well as frequent overhead sprayings. To obtain large

plants in a given space of time planting-out in rich, friable soil is to be recommended. Care, however, in this practice, is to be given to the lifting in the fall, as insufficiency of a bale of earth at lifting may prove disastrous thereafter. While it can be rooted from old wood, semi-young wood is the most appropriate, as roots are emitted from such wood much more quickly than from the former. There is a variegated form of this type that is less satisfactory as it is generally less floriferous, otherwise it makes a very fine plant when grown to a large size.

Rockerries or Rock Gardens

Why is it that this branch of the gardener's art receives such scant attention on this side of the Atlantic? Most every estate of any magnitude contains a nook or corner suited for the construction of one, and as a rule the situation most suitable for a rockery is hardly adapted for any other purpose. When one considers the multitude of gems that flourish in only such positions, and when it is taken into consideration what a treat it is to stumble onto one, after seeing large areas of smooth lawn, symmetrical roadways, the everlasting wavy line of shrubbery, etc., it is surprising that they are not more in vogue.

In most of the botanic gardens and many private estates on the other side the rockery is one of the spots most frequented by sightseers. At any season of the year it is attractive, whether in early spring when the fern fronds are untwirling in graceful coils in the shady crannies and many alpine plants are flowering on the more exposed situations, or summer and autumn when the ferns have fully developed their fronds and show their great diversity of formation, from the broad leathery looking scolopendras to the fine feathery fronds of the lastreas, etc., and the noble osmundas, to the small, but nevertheless interesting adiantums and aspleniums.

Many of the rarer and beautiful alpine plants require to be lifted in fall and potted up and kept in a cool house, as it is somewhat difficult to shelter them properly, as the pockets in which they love to be placed fill with rain or melted snow, and freeze solid, frequently killing them outright, or else crippling them to such an extent that they seldom recover.

The general idea of a rockery is a heap of soil and stones, pyramidal or otherwise. We are not advocating the construction of any such thing. The idea one should try to obtain in building a rockery is that of a rocky glen in miniature. The rougher in outline the better, making as many pockets in all kinds of places as possible. The introduction of water for cascades and pools will lend an added charm and will make it possible to introduce many species of both plants and ferns that otherwise would not succeed.

Field stone of rough exterior, tree butts, large clinkers such as can be had at smelting concerns, etc., are amongst the most suitable articles for construction, and with the careful use of cement it is surprising what effect may be produced. In making the pockets always try to provide adequate drainage.

Prosperity in the nursery trade

It is doubtful if the history of horticulture in America can furnish a parallel for the tremendous expansion which the ornamental nursery trade has experienced during the past few years. Every dealer in hardy shrubbery and herbaceous material has had more business than he could attend to during the spring which has just closed and it has been impossible to obtain the stock to fill the orders for special sizes in some things at figures that would make an orchid dealer envious. There is plenty of room for more nurseries and the best of encouragement for their establishment. In no section of the country is this industry overdone and the limit for the immediate future is not in sight. Enterprising young men make a note of it.

The great floral holiday

Decoration Day has again come and gone and according to beautiful custom the field, garden and the greenhouse have given lavishly of their choicest product that the day might be appropriately observed. Each year sees this occasion take on a deeper significance and a more widespread devotion of the holiday to its rightful purpose. But great as the demand for flowers has become and astounding as its increase has been from year to year, we believe it is yet but moderate as compared with what the future will develop. Already in many communities it has reached the distinction of being the most important day in the year in the amount of business it brings to the florist. Eventually this will be true of every community. Now is the time to plan for next year's special crops to meet this call.

The peony

The importance of the peony as a cut flower, in a commercial way, grows apace. Thanks to the discerning foresight of a few enterprising growers certain markets are already, while the demand is still young, handling peonies in a systematic wholesale manner while in others the movement has scarcely been felt thus far. Growers will make no mistake in planting liberally of this popular subject which is bound to take the same indispensable place in its season which the chrysanthemum holds in

the autumn. We expect to see the flowering season extended to cover many weeks, by the production of extra early and extra late varieties and the adoption of special cultural methods, as has been done so successfully in the case of the chrysanthemum. Cold storage of the buds has also been carried out with fair success by sundry large growers. As to varieties, those kinds having the most desirable qualities of usefulness and popularity will gradually come to the front from the over-crowded lists now available. It will be a long time, however, before the splendid variety *Festiva Maxima*, shown on the frontispiece of this paper, has to take a back place as a florists' flower.

The Boston gardeners are admonished

In the May issue of our esteemed contemporary, *The National Nurseryman*, we find an editorial comment on the project of the Gardeners' and Florists' Club of Boston to establish a course of study in the primary essentials of landscape garden work: "Gardeners," it tells us, "should remember that landscape work in its highest sense is a fine art, and is very different from the mere laying out and planting of restricted areas of ground. The essentials and qualities of a good landscape are not in the same category with the requisites of a backyard or a small dooryard lawn. While instruction of this kind is most desirable, gardeners should realize that a brief course of that type will not make them landscape gardeners. It is valuable from the standpoint of making them more familiar with plant materials, but the study of landscape gardening can only be conducted by a study of the theory of design in its broadest sense." Doubtless this ponderous chunk of pedantic profundity will duly impress these presumptuous Boston gardeners who would aspire to reach out beyond their "backyard or small dooryard lawn" and dare to trespass upon this sacred domain of "fine art" which our Rochester contemporary assumes to guard so jealously. It is possible, however, that these venturesome gardeners may also "remember" the teachings of one A. J. Downing who held that beauty of landscape cannot be subjected to or circumscribed by any fixed rules of art, and they may also take courage from the words of that great expounder of the principles of taste and their application, when he wrote, "There is really a native school of horticulture about Boston, and even foreign gardeners are obliged to yield to its influence." We do not think there is any need for our respected contemporary to worry about the outcome of this little educational venture on the part of the Boston fraternity. They "realize that a brief course of that type will not make them landscape gardeners," but they also realize that the exclusive possession of intellect, genius, and refined taste has been bestowed upon no individual or coterie and undoubtedly know very well what they are about. We might also add that anyone who thinks to feather his nest by adopting a supercilious attitude towards the gardeners shows mighty poor judgment.

AFTER ADJOURNMENT.

Rhododendron Smirnovi is a new variety of the evergreen section from the mountains of Northern Asia, which has just bloomed for the first time at the Arnold Arboretum. It appears to be perfectly hardy here and its most remarkable quality is its early blooming. It is now through flowering, when atrosanguineum and others hitherto among the earliest hardy varieties are just opening. The flower is large, pink, finely spotted with light brown on the upper lobe. The variety promises great commercial value.

As announced in our advertising columns the Messrs. Barrows are now ready to send out their new fern, Nephrolepis Whitmani. It is seldom that we can give the unqualified praise to a new introduction which in this instance is merited. Perfection of form and rapidity of multiplication will make it at once a favorite with the amateur and the commercial grower alike.

The great rainfall of the past few days has changed the complexion of things horticulturally and agriculturally, and instead of dust-dry garden beds we now have deeply soaked earth. The weeds have already found it out and weed killing will soon take its place on the program. The weed-killer man whose advertisement appears on the back page of this paper now becomes a very important personage, and we suggest that our readers communicate with him speedily.

NEWS NOTES.

The Essex greenhouses, Cleveland, O., have been rented by F. C. Bartels, who has been connected with the J. M. Gasser Company.

The greenhouse of Fritz Herst at Bennington, Vt., was badly riddled by a hail storm on May 25. Damage to glass and plants estimated at \$500.

The South Bend Floral Co., South Bend, Ind., are planning the addition of 20,000 feet of glass to their plant to meet the needs of their increasing business.

Foster Bros., located at 1564 Fulton street, Brooklyn, N. Y., were the victims of burglars on May 25. Fortunately there was only a small sum of money in the cash drawer.

John Dellar of Cincinnati was thrown from his wagon by a collision with a street car and so badly injured that he was taken to the hospital. At last reports he was improving.

By order of T. T. Crittenden, referee in bankruptcy, the stock and all assets of the Chas. A. Shaeffer Floral Co., Kansas City, Mo., were sold at auction on May 19 by U. S. Marshal E. R. Durham.

While Fenton Fennell of Cohoes, N. Y., was delivering orders on the afternoon of May 21, an electric car crashed into the rear end of his wagon, throwing him against the bridge which he was crossing. He was removed to his home and examination showed that no bones were broken, but his muscles were wrenched and flesh torn, and his recovery will be slow.

WHOLESOME CHESTNUTS.

To keep private hedges in good condition they ought to be clipped early. Tall growing herbaceous plants should be supported by stakes of wood with the bark on or painted green. White tips are not harmonizing, far less ornamental.

Although the melon blight absented itself last season it is the safer plan to be as fully prepared for its presence as possible. For that purpose it will be well if melons are grown in regular frames (not melon frames), to continue covering them in order that at least a part of the crop expected may be secured.

It may seem a big job to thin the fruit on out-door peaches and on pears but I question if there is one that tries it once that doesn't keep up the practice, because of the better fruit in every way that invariably results.

Hydrangeas, like roses, require a great deal of water when making their growth and, like roses too, the size of bloom depends on the growth of wood and for that reason they should be carefully watered and fed before flowering and while they are in flower. Hydrangeas in tubs do not show up to good advantage the first season after tubbing if they have been before then grown in the open ground but under favorable conditions they will make up for what they lack, the second season.

The mortality among hydrangeas last winter ought to teach us that it will pay to lift plants of moderate size at least, and put them where they will be reasonably safe from whatever cause played havoc last winter.

When cutting paeony flowers for use in decorating don't defer putting the stems in water immediately after they are cut otherwise the flowers will not last long.

Have you roses Frau Karl Druschki and Mildred Grant? If not, try and see them in bloom somewhere; in the latter event I am mistaken if in consequence a few plants do not change hands before this time next year.

TOLEDO ENTERPRISE.

Searles Bros., one of the leading market gardening firms in Toledo, O., are preparing to erect a range of greenhouses for lettuce and cucumbers. Their present plant consists of ten houses, each 34x260, and they have recently acquired two adjoining plots of ground which will be put under glass, making a tract of nearly twelve acres. They will build this year enough houses of size 14x750 to cover two and a half acres, for which contract has been let. Construction has begun on the boiler plant, which is to be 60x150. Hot water will be the system used in heating. They expect to have the two and a half acres of glass in working order by October 1.

One-half of George Bayer's place is now devoted to tomatoes, and they are fine in foliage and fruiting satisfactorily. Before tomatoes were planted, lettuce was the crop, which was put in after the chrysanthemums had outgrown their usefulness. Mr. Bayer is thus making a happy combination of cut flowers and garden truck, and that there is no mistake about it is shown by the prosperous appearance of the whole plant.

THE INCONSISTENCY OF JUDGES.

Editor HORTICULTURE.

Dear Sir:—In your issue of April 14th I notice a letter under the heading of "An Exhibitor's Grievance" in which the writer displays an admirable frame of mind in saying he would rather have a cultural certificate than a gratuity. In the following issue we have a letter from the chairman of the committee of judges giving a reason for withholding such a certificate, namely, that the pips were not grown by the exhibitor, and required only ordinary culture. In your issue of this week I notice a cultural certificate has been given by the same society for Lilium candidum. Now to a "Gardening Elizabeth" such inconsistency is incomprehensible and I dare say the same for a good number of your readers. Does Lilium candidum require more skillful culture than lily of the valley? or were those bulbs in question grown by the exhibitor, or even American grown?

Yours,

ELIZABETH DRAKE.

Pittsburg, Pa.

PERSONAL.

W. F. Dreer of Philadelphia was a visitor in Boston for a few hours last week.

George E. Struck, traveling representative of Lager & Hurrell, is sick with the measles at the City Hospital, Boston.

William N. Reed of Reed & Keller, New York City, accompanied by Mrs. Reed, will sail on June 12 for a business and pleasure trip on the other side.

Mr. and Mrs. Joseph Fuller of Leominster, Mass., will sail from Boston for Naples on the Romanic, June 5. They expect to spend about two months in European travel.

OBITUARY.

Charles E. Parker of Holden, Mass., died on May 22. He had served the town in various capacities and conducted a florist business for many years. He is survived by a widow and five children.

John Kelly died at his home in New Canaan, Conn., May 19, aged 83. Mr. Kelly had been connected with Edwin Hoyt's nurseries since boyhood, and had grown up with the business. A widow and five sons survive him.

Mrs. Norton, wife of M. H. Norton, ex-president of the Society of American Florists, died on May 26, after a long and painful illness. The funeral took place on Monday, May 28, from her late residence in Dorchester, Mass.

Frank B. Smith, who for the past twenty years has been engaged in the florist business in Danville, Ill., died at his home in Roselawn on May 13, aged 59. His sons Joseph J. and Herbert E., who have had charge of his business for the past two years, will continue it under the name of Frank B. Smith's Sons.

INCORPORATED.

Begerow Floral Co., Newark, N. J.—A. Begerow, A. C. Begerow, O. Ramssperger, J. Schottmaier, T. W. Dobbins, Jr. Capital, \$25,000.

NEWS OF THE CLUBS AND SOCIETIES.

NEWPORT HORTICULTURAL SOCIETY.

A regular meeting of this society was held last Tuesday evening, President MacLellan in the chair. The finishing touches were given the schedule for the August exhibition. It was expected that a lively discussion would arise out of the question referred to the Executive Committee, "What is an Annual?" but that committee judiciously rid itself of the whole business by referring the question in turn to the judges at the exhibition which now to me seems the most sensible course to pursue.

Again this year one of the features of the Carnival will be a floral parade and, considering the pronounced hit made by the society's float last year, the members voted to send a delegation to attend the meetings of the carnival committee with power to co-operate in any undertaking suggested and give the carnival committee to understand that the Horticultural Society would again place a float in the parade. It was also voted to select judges for the exhibition from among the gardeners of Newport in order that the disappointed ones may have a better chance to wreak vengeance.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The next field day of the club will be held on Tuesday, June 19, at the estates of Larz Anderson and Mrs. W. C. Brandegee, Faulkner Farm, Brookline. Members will meet at 3 o'clock on this occasion and after the estates have been inspected adjournment will be made to Horticultural Hall where the regular monthly club meeting will be held, and for which a specially attractive program is arranged. Full details later.

W. N. CRAIG, Secretary.

MASSACHUSETTS HORTICULTURAL SOCIETY.

The annual rhododendron exhibition of the Massachusetts Horticultural Society will be held at Horticultural Hall, 300 Massachusetts Ave., Saturday, June 2, from 12 to 6 o'clock.

In addition to rhododendrons and hardy azaleas there will be a fine display of orchids, irises, hardy herbaceous flowers, and ornamental trees and shrubs. Collections of vegetables also will be shown.

Admission is free to the public.

WM. P. RICH, Secretary.

AMERICAN SEED TRADE ASSOCIATION.

The twenty-fourth annual convention will be held at the Boody House, Toledo, O., June 26-27-28, 1906.

OFFICERS 1905-1906.

President.—W. H. Grenell, Pierrepont Manor, N. Y.; First Vice-President, L. L. May, St. Paul, Minn.; Second Vice-President, G. B. McVay, Birmingham, Ala.; Secretary-Treasurer, C. E. Kendel, Cleveland, O.; Assistant Secretary, Frank H. Funk, Bloomington, Ill.

Executive Committee.—C. N. Page, Des Moines, Ia.; S. F. Willard, Wethersfield, Conn.; G. B. McVay,

Birmingham, Ala.; M. H. Duryea, New York City; F. W. Bolgiano, Washington, D. C.

Membership Committee.—Albert McCullough, Cincinnati, O.; Alfred J. Brown, Grand Rapids, Mich.; W. S. Woodruff, Orange, Conn.

Committee on Arrangements.—C. S. Burge, Chairman; Wm. T. Phillips, F. W. Jaeger.

ORDER OF BUSINESS.

Reports of the Secretary and Treasurer; Election of Members; Reports of Committees; Reading of Communications; Unfinished Business; New Business; General Discussion and Annual Election and Installation of Officers.

Opening Session, Tuesday, June 26, 10 A. M.

PROGRAM.

"The Seed Catalogue from the Customer's Standpoint," Floyd Bralier.

"Varietal Description of Garden Vegetables," Prof. W. W. Tracy (U. S. Department of Agriculture).

"Early History of the Seed Business," Burnet Landreth (D. Landreth Seed Co., Bristol, Pa.).

"Desirable Imported Natural Grasses," Henry Nungesser (Henry Nungesser & Co., New York).

"Seedsmen and Civic Improvement," J. Horace McFarland (President, The American Civic Association).

"Co-operative Publicity through the Press Department, National Council of Horticulture," James Burdette (Chicago Tribune).

"Modern Retail Conditions," Finley Acker, Philadelphia.

A glance through the program will give but slight indications of the importance of the topics presented. Mr. McFarland's address and that of Mr. Burdette will mark an era in the seed business of which some of us have no inkling.

The Committee on Entertainment, promises a fine program.

Mayor Brant Whitloch will make the address of welcome.

The Boody House has been selected for convention headquarters. Rates on the American plan \$3.00 to \$5.00 per day. Rooms may be engaged in advance by writing to the Boody direct.

Toledo is easily accessible by rail and by three boat lines and being centrally located this should insure a large attendance.

C. E. KENDEL, Sec'y.

CLUB AND SOCIETY NOTES.

A peony exhibition was held by the Pennsylvania Horticultural Society on Thursday and Friday of this week.

June 7 and 8 are the dates set for the Rose Show at Horticultural Hall. Prize lists can be had by applying to the secretary.

The special attraction at the Florists' Club of Philadelphia meeting Tuesday next will be peonies, and there will also be a discussion as to the coming convention at Dayton. President Thomas B. Meehan will have something special to say in opening the discussion.

The Society of Southern Florists and Ornamental Horticulturists was organ-

ized at Chattanooga, Tenn., on May 22d, and elected the following officers: President, R. C. Berckmans of Augusta, Ga.; first vice-president, C. W. Eichling of New Orleans; second vice-president, C. O. Hunt of Chattanooga; secretary, Dr. J. F. Wilson of Poulan, Ga.; treasurer, Jos. Steckler of New Orleans. Forty-two members were enrolled and practically all of the southern states were represented.

PEONY NOTES.

H. A. Terry of Iowa, the peony specialist, has sold his collection to Thos. Meehan & Sons, of Philadelphia. Mr. Terry in a letter to the writer says:

"I commenced growing peonies in 1858, getting my first stock from Prince of Flushing, thirty varieties: including Humel, Pottsi, Reevesi, Fragens, Count of Paris, Festiva maxima, Lutetiana, Edulis superba, Pleaissima rosea, Queen Victoria, etc. Most of the thirty produced sold freely, and I soon had thousands of seedlings, but generally not five in a thousand would be worth propagating, and often not one. I have now a fine collection of some two hundred choicest varieties of my own raising. I am still of the opinion that Festiva maxima is the best all round white, and for pink I think none much better than Plenissima rosea. Grover Cleveland is my best dark crimson. In fancy colored varieties: Carrie, Esther, La Reine, Mrs. Pleas, Maude Hutchinson, and Stephanea among the best. I am now in my 78th year, and do not know how long I will continue to grow peonies, but I want to be surrounded with them as long as I live. They are like my children, very dear to me."

I have heard Mr. Terry's Morning Star highly spoken of. It has light delicate outer petals, and the inner ones radiate like star rays from the center. Said to be the most lovely, fragrant and winsome flower. Mrs. Harrison is also a fine one, with deep red outer petals, center delicate pink.

GEO. C. WATSON.

PHILADELPHIA NOTES.

The Waretown Rod and Gun Club will hold its annual opening on the 15th inst. Commodore Westcott has already got the invitations out and the program all fixed.

The glass factories in this vicinity shut down for the summer on the 26th ult. Prices will have a tendency to harden until the start-up in the fall. Those who have not already contracted for their needs will save money by taking the matter up without delay.

Edward D. Drown of Weldon speaks highly of the "Target Brand" scale destroyer. It is easy to mix and apply, and stays on, he says. It is also very effective. His trees are now as clean as a whistle.

William R. Smith of Washington was a recent visitor. He looks well and carries his years like an ancient Roman. His intellectual power and fighting spirit for right and truth remain keen as ever. This is personal testimony. The writer is still a bit out of breath from the last encounter.

✓ Fertilization of Spruce and Willow

Recently, when the willows were in bloom, I had occasion to make certain studies of the flower and obtained drawings which may possibly prove interesting, because they tell very well the story of fertilization, making clear a more or less hidden and secret passage in the life history of these trees. The willow is one of the very first members of the awakening plant world to put forth flowers. The bees, bestirring themselves after a winter's rest, go from tree to tree in quest of honey, and as they clamber over the staminate catkins, become dusted with the pollen, which is later brushed off upon the stigmas of the pistillate catkins. This is only the beginning of the fertilizing process. How the pollen brings about the fertility of the seed is more mysterious.

As I write the spruce is in full flower, and the young cones are beautiful indeed, in red, orange and purple against the dark needle-foliage. Various species of pines, the hackmatack, and the hemlock are either in bloom or soon will come out. The observant wayfarer passing through the woods in May or June will note drifting trains and clouds of coniferous pollen. "The immense abundance of pollen, its lightness, and its free and far diffusion through the air in Pines, Firs, Taxodium, and other Coniferae, are familiar. Their pollen fills the air of a forest during anthesis; and the showers of sulphur, popularly so-called, the yellow powder which after

present the whole vast group of seed plants in its two grand divisions, the one with openly exposed seeds, the other with seeds in a closed cavity. To take the conifer first, for that is

Fig. 2. A scale from female cone, with ovules (ov); B, 2 stamens with pollen sacs (ps), the pollen falling from one; these from the male flower. All magnified.

the lower, the rounded scale in figure 2 was taken from the female flower or cone, the uppermost in figure 1. A pair of young seeds on the upper side are all ready for fertilization. In fact these egg-shaped bodies are scarcely seeds yet, merely ovules, lying openly on the upper side of the scale waiting for the coming of the wind-borne pollen. In due time this falls from the stamens of the male cone (fig. 1, lower cones), and after a longer or shorter aerial voyage lodges in the openings between the scales of the female cone. One of the grains as viewed through a strong magnifier is seen in the third figure. On applying the micro-metric scale to the grain I find that its diameter is about one three hundredth of an inch. Its lightness and buoyancy are increased by two air sacs (s, s). The main body of the grain is filled with soft living substance, its organs dimly visible in

Fig. 3. A single pollen grain of spruce, highly magnified; s, s, the air sacs for buoying the grain up; b, the body.

the interior. The newly arrived pollen grain rolls down between the scales, taking a somewhat circuitous course, and perhaps it is the impetus thus gained which carries it through

the pore and into a chamber of an ovule; at any rate it finally lodges at the point where three pollen grains were actually discovered in one of my sections, as shown at *g* in figure 4. The pollen grain is now in contact with the kernel of the ovule and I presume is held by some moisture of the walls. In a short time, that is within a day or less, as I conclude from the behavior of the cones, the grain germinates. A tubular extension of the body-wall appears (*pt*), which plunges into the tissue of the nucellus, like a root into soil, and grows toward a sac, the so-called embryo-sac, shown at *s* in figure 4. Some of the living substance from the pollen grain follows down the interior of this tube, in particular a rounded body of very small size but of very definite structure and properties, bringing with it, in fact, all the characters of the spruce tree from which the pollen came. How such a mere speck of matter can be freighted with the infinite variety of inheritance which observation and experiment shows that it must convey, is one of the greatest marvels of organic life. Yet in this minute sphere within the advancing pollen tube lie the inner determinants of all the features of the species,—the general stature and form of the whole tree, the color and texture of bark, the arrangement of the branches and leaves, the shape of the latter, the form, color and arrangement of the cone-scales, the shape of future pollen grains, the character of the wood, the

Fig. 4. Scale and ovule cut so as to expose the interior of the ovule; s, embryo sac; pt, pollen tube; g, pollen grains; magnified.

shape of wood-fibers, and the quality of the resin, and so on down to all the details of structure, gross or minute, and of habits, physiology, adaptation to particular habitats, time of flowering, longevity of the tree, etc. In short the constitution of the future spruce tree is determined by this little organism—if the word may be applied to a complex part as well as a whole plant—in conjunction with a similar body in the sac toward which the tube is now working its way. The tube finally arriving at its destination, the end wall is dissolved or burst, and the fertilizing body enters the sac, where it unites and fuses with the one already present, the first definite structure of a new spruce tree being the result. This is fertilization. From this beginning the tissues of the embryo arise.

The willow has its ovules entirely shut in and the pollen shut out. The pollen tube, therefore, which arises from the pollen grain, must travel a much longer distance than that of the spruce. The figure (fig. 6) shows the

Fig. 1. Flowers of the white spruce, slightly enlarged. Above, the female cone; below, 2 male cones.

a transient shower, accumulates as a scum on the surface of water several or many miles from the nearest source, testifies to these particulars" (Gray).

The conifers, therefore, depend for pollen-transport upon the winds rather than on insects. It is interesting to see that the lowest Dicotyledons—lowest and therefore nearest to the Gynosperms, if, indeed, the Angiosperms are related to the Gymnosperms at all—are in general wind-pollinated also; the willow being exceptional among the primitive, catkin-bearing trees. Walnuts, birches, hazels, hornbeams, alders, oaks, beeches, chestnuts, etc.—all low in the scale of Angiosperms—are wind-pollinated. As we ascend in the series, the plant shortly is seen to depend on insect aid and the flower becomes more and more adapted to the attraction and reception of these visitors.

The spruce has been an object of study also, and the drawings supplement those of the willow; for together the two plants fairly well re-

grains (somewhat larger in proportion than they ought to be) on the stigma, the tubes penetrating the loose tissue, and one that has already crept down the wall of the ovary and up to an ovule. That the tube should go directly to the pore of the ovule seems like an exhibition of intelligence until we find by experiment that such tubes in cultures may be directed in their growth by emanations of malic and other organic acids. We suppose therefore that the ovule emits some such active substance which ex-

Fig. 5. Flowers of the willow. From 100 to 200 flowers like these make up a catkin: A, staminate flower consisting of 2 stamens (st); B, pistillate flower, consisting of one pistil, the stigma at s; C, pistil opened, showing ovules (ov); g, honey gland; enlarged.

ercises a directive influence over the tube's course. As in the spruce and all other flowering plants a small fertilizing body, a nucleus, is produced by the pollen grain for the fertilization of the so-called egg nucleus in the embryo-sac. After the arrival of the tube at the sac and the entrance of the fertilizing nucleus, fusion takes place and a new willow has begun to have its being.

My chief excuse for recounting what must be known, in its main outlines at least, to many readers is the illustrative value of the drawings, which naturally require a commentary. I am tempted to add some remarks on the history of the theory of sexuality in plants—for it is plain that reproduction in plants is like that of animals in the central fact of the uniting of two minute, inheritance-bearing bodies as the initial step in the formation of a new individual, and that plants therefore are truly possessed of two sexes. The history of opinion, beginning in surmise, and passing through the stages of observation, experiment and minute research to our present full knowledge, is interesting in the extreme; and even the mere suggestive sketch possible here may be worth while. We of today speak of the phenomena of pollination, fertilization, embryo and seed-formation so easily and assuredly, as things of common information, that we do not easily grasp the difficulties which early naturalists had to overcome in winning true ideas of the matter. Some of the views of old writers are fantastical and amusing, and those of some investigators not so very old now appear curiously mistaken. To us who are in the midst of the swift current

of discovery by experiment the most interesting aspect of the whole history is perhaps the delay of many centuries before any one of the numerous students of plants who touched upon the subject of reproduction, made the smallest attempt at experimental study.

Some Greek and Roman writers speak of plants as male and female; but their notions were of the most general and unsubstantial sort. "Male" and "female" as applied to plants often meant nothing more than sterile and fertile. It was indeed observed that the seed plant in some cases becomes productive only when a pollen plant is near; but Aristotle, the chief natural philosopher of antiquity, though truly gifted with wonderful insight in many things, classed this fertilizing effect among phenomena of nutrition; nor did he make any attempt to find out by experiment whether pollen is universally needed for seed-setting.

Coming down to recent times, even subsequent to the beginnings of modern science (which we count as commencing with Lord Bacon) we find the first of Englishmen to study plants attentively with the microscope, Nehemiah Grew, speaking thus of the offices of stamens and perianth: "And First, it seems, That the Attire [stamens] serves to discharge some redundant Part of the Sap, as a Work preparatory to the Generation of the Seed. In particular, that as the Foliature [petals and sepals] serveth to carry off the Volatile Saline Sulphur: So the Attire, to minorate and adjust the Aereal; to the end, the Seed may become the more Oily, and its Principles, the better fixed. And therefore the Foliature generally hath a much stronger Odour, than the Attire: because the Saline Sulphur is stronger, than an Aerial, which is too subtle to affect the Sense. Hence also it is, that the Colour of the Parts of the Attire, is usually White, or Yellow, never Red: the former, depending upon a greater participation of Aer; the latter, of Sulphur." Further on he adds: "And the Globulets [pollen grains] and other small Particles up on the Blade are as the Vegetable Sperme. Which falls down upon the Seed-Case or Womb, and so touches it with a Prolifick Virtue." All we get from Grew is the conjecture that the stamens produce the male element in fertilization.

The doctrine of sexuality in plants was really founded by Camerarius, the ingenious and lucid-minded professor of botany in the University of Tübingen, in Germany, about 1690. He experimented with various plants and proved that in general pollen is necessary for fertility. For example, to quote his words: "When I removed the male flowers of Ricinus before the anthers had expanded, and prevented the growth of the younger ones but preserved the ovaries that were already formed, I never obtained perfect seeds, but observed empty vessels, which fell finally to the ground exhausted and dried up. In like manner I carefully cut off the stigmas of Mais that were already dependent, in consequence of which the two ears re-

mained entirely without seeds, though the number of abortive husks (vesicularum) was very great". He gave what was up to his time the best account of the structure of the flower and its functions. Some of his experiments were failures, however, for some plants do set seed without pollen—for reasons which we now know. Consequently his conclusion, that plants possess true sex characters, was

Fig. 6. A, pollen grain considerably magnified; B, lengthwise section of the female flower, showing the course of the pollen tube and 3 ovules, one split lengthwise; g, grains on the stigma; pt, pollen tube; es, embryo sac.

strongly opposed by many botanists, and disputes upon the fact of sexuality continued for the better part of a century.

Koelreuther's famous work in hybridizing settled the fact. It will doubtless surprise some who are familiar with the practical results of crossing species to learn that the first service of hybridization was to theoretical science. When Koelreuther about 1760 published his investigation he showed that the hybrid mingles the characters of the parents; and from this result he drew the important conclusion that the offspring inherits substance from both paternal and maternal parent: a demonstration and conclusion which could not have been had from two plants of the same species.

Pollen tubes were first seen by Amici, the Italian optician, accidentally, when for another purpose he was examining the stigma of a *Portulaca*, in 1823. He observed, in fact, the actual germination of the grain. Seven years later he followed the pollen tubes into the ovary and observed that one tube finds its way into the micropyle of each ovule. Soon afterwards Schleiden took up the further development, and believed that he saw the end of the tube pushed into the embryo sac and there become the receptacle in which the embryo is formed. Schleiden and his followers stoutly maintained the mistake until Amici himself, in 1846, proved the existence of a body in the embryo-sac, namely the egg-cell, which is excited by the influence of the pollen tube to further development and becomes the embryo. The exact nature of this in-

fluence, however, and the fact of the passage of bodies of definite structure from the tube to the sac, one of them a nucleus destined to join that of the egg in fertilization, became known only in the last quarter of the 19th century through the careful researches of still living investigators, chief among them the illustrious Professor of Botany in the University of Bonn, Edward Strasburger.

SEED TRADE TOPICS.

The consensus of opinion seems to be that the season just closing has been a very satisfactory one to the seed trade. Had it not been for the severe slump in March this would have been a record year. Even with this handicap there does not seem to be much reason for complaint.

Leading seed men are finding it difficult to secure reliable help during their busy season. Competent men have permanent positions and cannot be expected to leave them and enter the seed business for a few months in view of the salaries which most of the seedsmen think they can afford to pay. To be a really up-to-date efficient seedsmen requires a high order of intelligence, and the business cannot be learned in a few weeks either. It is a most perplexing problem.

Seed growers in the east generally are complaining of a lack of rain. It is yet too early to say that crops have suffered any material damage, but a stage has been reached where rain must come soon or deterioration will begin. What with severe frosts, forest fires and drouth, Michigan and Wisconsin have suffered more or less, and rain is badly needed to prevent serious damage to the pea crop.

The seed trade of Indianapolis seems in need of a tonic. J. A. Everitt's seed business was closed out under receiver's sale not many months ago, and was bought by a brother, Wm. H. Everitt, but it is generally believed J. A. Everitt's money paid for it. After wrestling with his purchase for several months, Wm. H. suddenly took French leave, and it is again in the hands of a receiver. Mr. J. A. Everitt through the receiver offers it for sale at a bargain, and will throw in his good will. Many affect to regard this last as a somewhat negligible quantity, and as an asset rather difficult to realize on.

W. W. Rawson & Co. have secured the building at corner of North and Union streets, Boston, and will remove from their old location, which they had temporarily fitted up after

the fire, on July 1. The new place is very eligibly situated.

J. A. Smith, is the new manager of the Michell seed store, in place of G. C. Thompson resigned. Mr. Smith has been already three and one-half years with the firm, in charge of the florists' and bulb department. Previous to this he was nine years at Dreer's—partly in the nursery and partly in the store—and two years with the Walter Mott Seed Co., at Jamestown, N. Y. Mr. Smith is a native of London, England, where he was born 26 years ago. His many friends are much pleased at this deserved promotion, and predict for him a successful future.

JOHNSON & STOKES PART COMPANY.

Announcement is made this week that the partnership existing for the past twenty-five years between Herbert W. Johnson and Walter P. Stokes of Philadelphia, will expire by limitation July 1st next. The business will be continued as two separate concerns one by Herbert W. Johnson and associates at 217 Market street under the corporate name of the Johnson Seed Co. and the other by Walter P. Stokes at 219 Market street under the name of Walter P. Stokes. The employees of the old firm are divided up among the two new concerns. The separation is reported to be an entirely amicable one.

CUT FLOWER MARKET REPORTS

BOSTON Decoration Day business has arrogated to itself all the interest attaching to the flower business of this neighborhood for the past few days. It has been in all respects a conspicuous floral record-breaker. As usual, the demand has been for material suitable for low-price work and has come largely from the country and suburban districts. In American Beauty roses the short-stem grade held sway. In other roses similar conditions controlled output and price. In carnations the sale was prodigious, colors having preference over the white varieties. Lily of the valley—the well-grown indoor stock—found a serious impediment in the outdoor crop which was just in its prime. The demand for astilbe was hardly as heavy as expected, and sweet peas did not make the record they did last year on this occasion. Double flowered stocks were superb in white, pink and purple, and sold well. The single flowered variety was worse than useless, and growers who had given their space and time to its cultivation had another jolt; nobody wants it. There was no disposition to exact or to pay increased rates on any flower, so far as we have learned. This is one of the reasons for the floral popularity of the day.

Up to the time of mailing this report the prospects are unmistakably for a record-breaking Memorial Day business. Everything in the line of cut flowers, with the exception of a few American Beauties and out-door lily of the valley is sold out in the wholesale markets. Full report next week.

COLUMBUS It has settled into warm summer weather, and in all lines we are beginning to slack down. Of course the sales of bedding plants are still very large, and will continue so until after Decoration Day. Peonies have come and are most welcome. Sweet peas are in good supply and go fast. Outdoor lily of the valley is much in demand. Decoration Day has helped prices this week; Enchantress, Lawson and other good carnations have sold well. The season here for bedding plants has been a splendid one; geraniums have been as usual the leaders with enormous sales. The

seedsmen are on their last run for the season, and it has certainly been a good one.

LOUISVILLE Business conditions the previous week were in general satisfactory. There has been a steady call for carnations with enough to meet all needs, but they are getting small. Roses continue in fair quality with demand and supply about equal. Sweet peas have had a great run and are fine. Lilies can be had in small quantities but go slowly. Excellent peonies are in and they sell well. Greens, with the exception of fancy ferns, are in satisfactory supply.

NEW YORK The general supply of flowers for Decoration Day was affected somewhat by the all-day rain of Monday with cool temperature. Out-door stock was consequently not as abundant as it would have been had weather conditions been different. Peonies were set back considerably, but there was a fair supply in the market and prices were satisfactory. American Beauty roses were plentiful and no extra demand was felt; in fact, the large grades were decidedly slow in moving. The call was for low-priced showy stock. Of the small roses there was no overabundance and the proportion of good clean stock sold well, especially on Tuesday, but the mildewed goods, of which there was a goodly share had to go at low rates. There was a plenty of carnations but many were of poor quality; the best sold readily, particularly the colors; whites and the bright reds were not called for particularly. Sweet peas of choice grade sold well but the general quality was very inferior. The bulk of the business was with out-of-town buyers, the city trade as usual on this occasion amounting to but little. Shipments on Wednesday were light, business ditto, and nothing was done after the early forenoon.

SAN FRANCISCO NOTES.

The eastern sentiment that bet pleases the florist, plantsmen and landscape gardeners is that, apart from any sentimental considerations, the rebuilding of San Francisco is a national necessity. We find that this

city is regarded as not only the metropolis of the Pacific Coast, but the nation's western gateway, just as New York is the eastern gateway. It not only is the natural inlet and outlet of the Oriental commerce, which every year becomes more important to the nation, but by virtue of its spacious, inclosed and otherwise magnificent harbor the most practical point of military protection on the Pacific Coast frontier of the United States. Therefore we are going to rebuild, and do it right hurriedly. And let it be recorded that the first to resume business in the burnt district is a florist, a pioneer propagator and grower, John H. Sievers, whose business, conducted in the name of Sievers & Boland in one of the largest and most beautiful frescoed stores in the city, was reduced to ashes by the great fire. Within a stone's throw of the John H. Sievers Company's nursery, located within a block of the burned section of the city, Mr. Sievers and his ante-calamity partner reared this week the old familiar sign, "Sievers & Boland, Florists," on a newly constructed board structure at the southeast corner of Van Ness avenue and Chestnut street. Within this expansive structure the entire old force of employees have drawn upon the nursery and arranged a beauty scene of blooming plants, and choice cut flowers.

San Francisco has repeatedly found time to wipe her weeping eyes and express sympathy for the two rival "Floral Cities" of the state, San Jose and Santa Rosa, which were sufferers by the earthquake to the estimated extent of \$800,000 and \$1,500,000, respectively. Although sufferers to such great extent these cities were heartily drawn toward San Francisco, and with the several carloads of provisions each sent here were great quantities of beautiful flowers donated by the growers of these two inland cities. The modest Burbank, of Santa Rosa, responds to a city paper that his place and all the growers of his city were unharmed by the quake, yet the governor of the state and party who made an official inspection of Santa Rosa's damage publicly reports that "although Luther Burbank's home and experimental gardens were materially disturbed, his photographic gallery in which were a valuable collection of negatives was smashed to splinters." And in San Jose, H. Bourguignon had three houses demolished.

business.

**GREENHOUSE
REASONS.**

Reasons are plentiful why **Premiers** are the best built. They are portable as well as durable—artistic as well as modern. You can see its superior **outside** points by its appearance; — the **inside** points of supremacy are proved by long wear — longest wear. They're all the same, from smallest to largest, — none of them ashamed to show their **ins** as well as their **outs**. We have had experience in greenhouse construction — that's the reason. Send for illustrated booklet No. 45.

**CHAS. H. MANLEY,**

Premier Mfg. Works,
ST. JOHNS, MICH.

**HORICUM****KILLS SAN JOSE SCALE**

Made by **HAMMOND'S SLUG SHOT WORKS,** Fishkill-on-Hudson, N. Y.
SOLD BY SEED DEALERS OF AMERICA.

Glenside, Pa., March 31, 1906.

HAMMOND'S SLUG SHOT WORKS, Fishkill-on-Hudson, N. Y.
Gentlemen: Seeing "Horicum" mentioned in Monthly Bulletin of Div. of Zoology, Penna., I would thank you to inform me where I can get a supply, say about a gallon for trial.

The San Jose Scale is very bad around this section and could no doubt push sale of the solution, especially as it is spoken of so highly in above Bulletin.

Your early reply will oblige, Yours respectfully,
P. S. Glenside is twelve miles from Philadelphia.

H. J. HINDS.

STEEL ENCASING

1/2 SIZE U-BAR

WOOD CORE

**WHAT IT
REALLY IS**

Here the U-Bar is in its parts—the wooden core—and the steel encasing. The core is first chemically treated against decay and then firmly pressed into the steel U-Bar, and fastened by strong screws every two feet on alternate sides of the casing, making a complete combination of the sash bar and rafter as one.

U-BAR GREENHOUSES

Are the Best Greenhouses Built

because they are the only houses combining the sash bar and rafter as one—the only house in which it is possible to space the glass 24 inches—the only house with the curved eave line—the lightest, strongest house made.

Fine large specimens in 8-in. pans, \$2.00 and \$3.00 each.

This is one of the most salable plants, and stock offered above will please you.

F. R. PIERSON CO., Tarrytown-on-Hudson, New York

WE ARE HEAD-
QUARTERS FOR

PRINCESS VIOLET STOCK

The Princess of Wales is still the leader of all single violets. There is no other variety on the market that can compare with it as a commercial violet because it blooms from Sept. 15th to May 1st; every bloom is marketable. It has size, it has color, it has length of stem. It has fragrance. It sells when any other variety, single or double, can not be given away. The people want it.

So great is my confidence in this violet that the following Autumn I will devote 80,000 feet of glass to the growing of this variety.

I have about 200,000 nice young divisions now ready to ship at the following prices:

\$2.00 per 100

\$15.00 per 1000

500 at 1000 Rates

Lots of 5000 at \$14.00 per 1000

Some People have taken our advice as published in these columns recently and are buying **My Maryland** for trial. We reiterate here—if it succeeds with you as it does with us, it will prove the best white carnation you ever grew. Despite the variety's apparent failure in several places, we strongly advise all growers to give it a trial. We have been frank about its faults as developed in other places. We doubt if these will develop in many places.

Jessica we believe, will succeed generally and will prove to be the best red and white variegated ever disseminated. Few varieties show as strong constitution as this one does and it is a wonderful producer. Extra fine stock of both varieties ready now. R. C., \$2.50 per doz.; \$12.00 per 100. \$100.00 per 1000. Pot plants, \$3.00 per 100 extra.

Send for our catalog, now ready.

Dendrobium nobile

The subject of the accompanying illustration is a well flowered, fairly good type of *Dendrobium nobile* one of the most popular and easiest managed of this large and polymorphic genus. The species itself is variable and includes many named and unnamed varieties which are quite distinct. It is a native of the Himalayas and Eastern Asia and is imported in fairly large quantities. Its distribution is large and it is so easily grown and propagated that there is little danger of the species ever becoming extinct.

During the growing season the plants should have plenty of heat and moisture, a temperature ranging from 70 degrees to 90 degrees F. and a relative humidity of about 80 per cent. will be just about right. As the growth is made in the summer months, these conditions are easily maintained. In autumn and winter somewhat drier and cooler treatment should be given, but the common practice of carrying dendrobiums into a cool house and keeping them dry as soon as growth is finished is harmful and unnecessary. Sufficient sunlight should be given to ripen the growths, but the pseudo-bulbs should not be allowed to shrivel. As Mr. Cameron says in his notes on *Thunias*, *HORTICULTURE*, May 5th: "Other conditions being right the question of compost is not very important." Still the best for dendrobiums is one that will allow plenty of root aeration and dry out quickly enough to allow the application of stimulants during the growing season. Peat and sphagnum in proportions of 3 of peat to 1 of sphagnum makes a healthy rooting-medium. It was considered the right thing in England, not many years ago, to pot dendrobiums so firm that the newly-potted plant might be lifted by the pseudo-bulbs and swung around a person's head without the plant coming out of the pot; such potting is not to be recommended. The plant should be made so firm that it won't shake loose in

handling, but without wedging. Baskets or perforated pans are better than pots for dendrobiums as in such receptacles there is less probability of the compost becoming sour.

Most dendrobiums can be propagated by laying down pieces of old pseudo-bulb on sphagnum moss and in a favorable temperature the buds at the node will develop into young plants. When air growths make their appearance they should be taken off with a portion of the pseudo-bulb before the roots become very long as roots which are developed in air will die when put into compost. The flowers are borne on two-year-old growths so that, if desired, the whole flowering growth may be cut without injury to the young growth.

James Hutchinson

Black Aphid

Columbus, Miss., May 29th, 1906.

Editor *HORTICULTURE*.

Dear Sir:—I have some young apple trees, that are covered with little black lice, especially under the leaf. I sprayed them twice with Sulphur Tobacco Soap, but it did not do them much good. Now would you please let me know, what would be the best thing to do for them to remove the lice and keep them nice and clean.

Hoping to hear from you immediately and by so doing you will greatly oblige,

Yours very truly,

EDWARD E. BUDER.

The lice, being sucking insects, require a contact poison, to kill them by penetration and suffocation, the standard solution for this purpose being kerosene emulsion. This is easily made by grating one-half pound of whale oil or laundry soap into one gallon of boiling soft water, or hard water softened by the addition of soda or borax. When the soap is dissolved it is removed from the fire and two gallons of kerosene is slowly added while the mixture is hot. It is then churned for ten or fifteen minutes until it has passed through a milky stage and become creamy. The churning is very important and to be effective the spray must reach the creamy consistency. An easy way to do the churning is to put the solution into the spray machine tank and pump it back into itself for several minutes.

This gives a stock solution which will keep for several weeks. For use it is diluted just before being applied at the rate of one part of the stock solution to nine parts of water.

Whale oil soap one pound to seven gallons of water is another good contact insecticide.

Bowker's Insect Emulsion used at the rate of one gallon to twenty gallons of water is also valuable where a prepared spray is desired.

It must be borne in mind that the lice are very rapid breeders so if a few escape they will quickly breed enough to badly reinfest the trees in a few days. For that reason frequent and thorough sprayings are necessary, for to be effective the spray must touch the insect. This is practically impossible to accomplish the first time because of the small size of the lice and the rolling of the leaf, due to their depredations, which partly protects them. However, persistent work will surely win out, and on the trees are clean it will be an easy matter to keep them so.

R. S. Adams.

British Horticulture

AMERICAN AND BRITISH METHODS

An interesting paper from the pen of Professor Corbett, of the Department of Agriculture at Washington, was read at a meeting of the Royal Horticultural Society, on May 15th, entitled "Some Phases of 20th Century Horticulture in the United States." Some striking details were given of the rapid growth of the great centres of population, and the perfected railway facilities for shipping produce in the States. Contrasting the two countries, he considered that the ornamental horticulture of England surpassed that of the United States, but the commercial horticulture of America completely outstripped that of England. In both cases, however, the levelling process was progressing rapidly, and he looked forward to the time when, by means of improved railroad facilities, the English market gardener would regard his work more as a commercial speculation than as a mere hobby. Professor Corbett might also have included the motor, for this modern method of locomotion is likely to play a more important part in future developments.

THE TEMPLE SHOW

Elaborate preparations are being made for the annual show of the Royal Horticultural Society in the historic Temple gardens in London. This is the event of the horticultural year, famous for its magnificent display of flowers and assembly of fashionable people. The show opens Tuesday, May 29, and is continued on the two following days. Orchids usually form an attractive feature. Messrs. Sander & Sons of St. Albans are making a good display in this department. Foremost in their costly collection will be *Cattleya Schröderæ* the Baron, which is considered the most wonderful *C. Schröderæ* ever exhibited, and *C. S. Princess Ena*. Many white species of *cattleya* will be seen, besides a remarkable new hybrid of *zygopetalum*, a very fine yellow-flowered *lælio cattleya* hybrid, etc. Amongst the rare and interesting collection to be staged by Sir Frederick Wigan is *Zygopetalum Rœblingianum*, sent from America to be sold for the benefit of the new Horticultural Hall Fund, and bought by Sir Frederick for 50 guineas. Messrs. W. Bull & Sons will have some orchids in their group, notably *Lælio purpurata* Rex, a superb variety, with an intensely colored lip, and very bright sepals and petals. Rhododendrons are usually a popular line at the Temple show, and in this branch Messrs. John Waterer and Sons of the American Nurseries, Bagshot, are usually to the forefront. Their large and varied collection has been further augmented by White Pearl and B. de Bruin, and several favorites will be seen, such as Pink Pearl, Michael Waterer, Vats Waterer and Fred Waterer, who so exquisitely represent the firm's name. In the grounds the firm will have a collection of hardy shrubs, conifers, hollies, etc.

ROSES AND CARNATIONS

Messrs. B. R. Cant and Sons who have won many honors as rosarians, will show their newest hybrid tea, Nance Christy, which has large semi-double flowers of a delicate shade of salmon-pink, and has the great advantage of prolonging its reign when others fade. Fit companions will be found in Mrs. O. G. Orpen, the rosy pink climbing Damask, Maharajah, one crimson pillar variety, and Blush Rambler. Roses in pots will repre-

sent the glories of the nurseries of Messrs. Wm. Paul & Son. In all their summer radiance will be seen Waltham Bride, Lady Gay, Hiawatha, David R. Williamson, Dr. William Gordon, Dora, Celia, Earl of Warwick, Warrior, Wedding Bells, etc. Messrs. W. Cutbush and Son are exhibiting the new rambling rose, Mrs. F. W. Flight, which has already hosts of admirers, and Mrs. Wm. H. Cutbush, the new polyantha rose. Carnations will also be a strong feature, including a new scarlet King Arthur. The tree peonies sent out from the nurseries of Messrs. Kelway and Son enjoy a world-wide reputation. Amongst the most popular of the newer ones is James Kelway, a semi-double flower of a rich rose tint, verging on scarlet, with a dark carmine centre. Leading varieties of pyrethrums and delphiniums will enhance the attractiveness of the display.

MISCELLANEOUS EXHIBITS

Mr. A. J. A. Bruce devotes his attention chiefly to *sarracenias*. The newest ones comprise *S. crispiana*, produced by a cross with *S. Courtii* and *Sanderiana*. The pitchers are 18 inches high, with slender base, the lids being two inches wide, recurving over the mouth. The color is light crimson with white mosaic markings. *S. Wilksæ* is a result of a cross between *purpurea* and *melanorhoda*. The pitches are 18 inches high, with a green ground, heavily lined with brightest crimson. Messrs. Stark and Son are showing a new *tropæolum* with variegated foliage. At the stand of the Craven Nursery Co. an interesting display will be made with the pure white variety of *Primula farinosa*, recently discovered in one locality in the Craven highlands. The firm have a new *tiarella*, named *superba*, a splendid vivacious plant, at three times the same of *T. cordifolia*, and entirely different in habit, throwing no stolons, but forming a dense clump in which the year's new leaves, russet, red, and pink, make a lovely contrast with the sombre note of last season's foliage, lying round the plant in a ring. From the centre of the mass rise innumerable stalwart rosy stems, having clouds of delicate flowers with pinkish antlers, which continue in bloom for a protracted period.

W. H. Aclsett.

London, Eng., May 26, '06.

A Field of Hyacinths in Bloom at Hillegom, Holland

SEE FRONTISPIECE

Seldom have weather conditions in Holland been so favorable for a perfect bulb crop as during this spring.

The hyacinth crop is particularly liable to injury by adverse weather. Severe frost destroys the flowers and foliage of blooming hyacinths, and interferes with the development of the bulbs. There has been no severe frost this season and the bulbs are attaining a splendid growth which needs only moderate warmth and sunshine to give them firmness and solidity as they mature. Prices are likely to rule about the same as last year.

Narcissi and tulips are less dependent upon warmth and sunshine. Both promise good crops. In narcissus the present conditions indicate a plentiful supply of all

popular varieties and prices about the same as last year. The better class of large trumpet varieties, such as Emperor, Empress, Horsfieldi and Sir Henry Irving are now low enough in price to tempt the commercial grower.

The tulip situation has changed materially from former years. The American varieties, as the Hollander designates the sorts we buy for forcing, including La Reine, Cottage Maid, Rosa Mundi, Huikman, Yellow Prince, Keizer Kroon and Duchess of Parma will be higher in price, especially the two last named. This advance is largely due to the enormous yearly increase in demand for these sorts in the United States for commercial purposes.

Hints on Boilers and Heating

In previous articles we have drawn attention to the importance of selecting a good boiler, location of boiler cellar, arrangement of pipes, etc. These are not the only essentials to be considered in a heating apparatus. What you contemplate growing is also an important item. If the product is to be cut flowers—such as roses, carnations, gardenias, chrysanthemums, violets, etc., all of which require various temperatures to produce the best results, the apparatus must be easily and quickly controlled. This result can best be obtained in a hot water apparatus by the use of small pipes, not over two inches in diameter; pipes containing a larger body of water cool off too slowly when quick action is required.

Gate valves giving full opening of the pipes should be placed on each run on flow and return. Valves with smaller openings than the pipe check the circulation and are useless. The ancient method of regulating the temperature in the house at the boiler and omitting valves on the runs, has been abandoned by progressive florists and gardeners.

Coils should be properly distributed; in a house running east and west place more pipe on the north side than on the south, with a proportionate amount through the center; in houses running north and south the larger amount should be placed on the west side. The ends of houses should be well taken care of, with sufficient pipe to heat the glass. It often happens this is not done and the result is cool ends and an unequal temperature quite a distance in from the ends.

The importance of maintaining as uniform a temperature as possible in the water while circulating through an apparatus can not be over estimated, as this gives a more uniform temperature in the house. It is much more difficult to regulate an apparatus properly where the temperature of the water varies from 30 degrees to 50 degrees in flow and return than where the variation is only slight, say from 10 degrees to 15 degrees. To keep the temperature where wanted on a cold day or night, and to reduce the temperature quickly when the sun comes out in the morning are the requisites necessary in an up-to-date apparatus. This result can be obtained in two ways: Uniform temperature of water with sufficient radiating surface or an excessive amount of radiating surface when the temperature of the water varies and apparatus properly valved.

In an ordinary gravity system the temperature of the water will vary from 30 degrees to 60 degrees, the average temperature being from 140 degrees to 170 degrees depending on conditions, arrangement of apparatus, etc. The quicker the circulation the better the results.

X.

Instruction in Landscape Gardening

Editor of HORTICULTURE:

Dear Sir: I noted in your issue of last week an extract from the editorial page of the National Nurseryman commenting on the recent action of the Gardeners' and Florists' Club of Boston, regarding the establishment of a school of instruction for gardeners in horticulture and landscape gardening. The criticism of the National Nurseryman is undignified and ill-considered, it being quite evident that it was made with little knowledge of the subject under criticism.

A copy of the report of the committee is enclosed which will perhaps bear out this assertion.

REPORT OF SPECIAL COMMITTEE OF THE GARDENERS' AND FLORISTS' CLUB OF BOSTON.

Mr. President:

Your Committee appointed to consider and report on the matter of the establishment of a school of instruction in Horticulture and Landscape Gardening, for gardeners, under the auspices of the Gardeners' and Florists' Club of Boston, would report as follows:

In the opinion of your Committee there is need for such a school. The tendency of the day among young gardeners is largely toward the idea that indoor gardening is the most important branch, and the one in which the gardener's skill can be the most highly expressed. This error should not only be corrected, but the way should be opened whereby the young gardener may be enabled to fill a larger space in his profession. This widening of his field, your Committee believes, should be in the direction of natural gardening, and the course should especially include instruction in the mechanical and artistic development, on natural lines, of parks and ornamental grounds. We believe this to be of the first importance, in view of the fact that the prevailing desire is for country homes and country life.

Further itemizing, your Committee would suggest that the course of instruction should comprise sketching, the making and laying out of plans, the use of the level and transit, and instruction in simple land surveying operations, also lessons in the underlying principles of landscape gardening, broad enough to include studies of treatment of specific areas of ground, planting material, preparation of ground for planting, road-building, drainage, etc.

It is as essential that gardeners should be acquainted with landscape gardening as that landscape gardeners should have a knowledge of plants and their requirements. Not that one should enter into competition with the other, but that each will understand and be helpful to the other. A gardener who has studied landscape work is a more valuable assistant to the landscape gardener than one who has to be guided at every step. A gardener on a small estate cannot be considered competent if he has not sufficient knowledge of landscape gardening to, at least, maintain the idea of designers who may have made the plan, or to make a slight change or alteration without asking for professional assistance.

Your Committee further believes that there is a desire among young gardeners that such a school should be established, and that full advantage would be taken of the privilege of attending. Therefore, in view of this presentment, it would recommend that steps be taken to open the school next October, for a course of five months, and that a committee be appointed to further perfect the scheme and study its details.

It is of importance, in the opinion of your Committee, that early action be taken in the matter, so that, if the recommendation is approved and adopted by the Club, the Committee can at once commence work on details, issue a prospectus, and open entry lists.

Signed by the Committee: John K. M. L. Farquhar, Chairman; J. A. Pettigrew, James H. Morton, James Wheeler, William N. Craig.

Very sincerely yours,

HORTICULTURE

The coming peony show

Next week the Peony Society, the youngest of our special organizations, holds forth at Boston. It is expected that the combined exhibition of this and the Massachusetts Horticultural Society will be a gorgeous affair, as befits the regal flower in the interests of which it is inaugurated. As a garden ornament and as a florists' useful decorative flower the peony stands in the first rank. Boston is always pleased to welcome the craft—none more so than the peony enthusiasts, who come at the season of the year when her particular attractions are most in evidence. We hope the crowd will be a big one.

Our advertisers have prospered

With the rapidly growing strength and influence of the professional horticultural press, the commercial interests of the people they serve have been extending and developing at a marvelous rate. Florists and nurserymen have been brought into touch with one another and the more progressive, taking advantage of their opportunity, are rapidly opening up new and lucrative avenues for business. The season just closing has seen much the largest aggregate of sales thus far in this country, of hardy plants, greenhouse stock, bedding plants—in fact, everything which anybody has had the courage to advertise. Horticulture is happy in the satisfaction of having been a participant and rendered creditable service in the good cause. It has the assurance of its advertisers to this effect and that is sufficient.

Rhododendrons

We feel a sincere sympathy with those of our horticultural friends who, by climate or soil or other cause beyond their control, are denied the pleasure of having and enjoying the rhododendrons which at the

present time are the glory of the gardens about Boston and along the Sound and elsewhere. The hardy rhododendron, when in congenial quarters, is easily the peer of any garden shrub. It bursts into bloom with an exultant exuberance that but few plants can equal or even approach and, when out of bloom, it is still beautiful in its dark glossy evergreen foliage. Enterprising nurserymen can confer no greater benefit than to follow up and prove and gradually bring to the front a good list of reliably hardy varieties in bright colors. Those who are working to this end can depend upon an ample public appreciation of every advance made.

The menace of insects

Attention has been called to the fact that, although our national government has full power to control the introduction and spread of insects hurtful to men or animals, it has no laws relative to those that injuriously affect plant life, and yet the total value of agricultural and forest products in the United States is very many times that of all the animals and products therefrom. The losses annually from insect depredations are appalling and yet Congress hesitates to take action in the case of the gypsy moth and browntail moth invasion—an invasion which those having the best opportunity to know, can see means inestimable destruction unless something far beyond the ability of State or individual is done, and done quickly, to check its progress. It is plainly the duty of the national government to aid in the work that is now being prosecuted locally to prevent the further spread of these odious pests and, not only that, but to enact such laws as are necessary to prevent as far as possible the importation hereafter of injurious foreign insects.

Judges' problems

The communication from Mr. Fewkes on another page of this issue will be carefully read by all who are interested in horticultural exhibitions and realize the trying responsibilities under which the judges at these affairs have to work. Any gardener with a spark of pride about him would naturally prefer a certificate to a small cash gratuity as a recognition of his exhibit. Yet it must be kept in mind that the more liberal the distribution of certificates the less their value and as soon as it becomes apparent that they are being given out other than for objects of unusual merit they will no longer be considered worth striving for. It is the duty of judges to guard jealously the issuance of these honors so that their standard of value may be maintained. We do not like to hear a competitor in the prize classes making a fuss because he was not awarded the prize he thought he should have but we do believe it to be entirely proper that the exhibitor of a novelty or other object of especial excellence should request the judges to state upon what grounds a certificate has been bestowed or withheld and the judges should always be able and willing to give reasons which will justify their action in the eyes of reasonable people.

JUDGES' PROBLEMS.

Editor HORTICULTURE:

I notice in your issue of June 2 an article signed by a lady in Pittsburg, Pa., taking our committee to task for making a certain award here in Boston, to forced specimens of *Lilium candidum*. I think it is safe to say that the lady saw neither of the exhibits referred to and as she seems to be seeking for information I will endeavor to explain the matter.

In her statement regarding the pips, she somewhat misrepresents the facts, for I did not say that the lily of the valley required only ordinary culture. If she will re-read my article carefully she will see that I intimated that a cultural certificate can be given under two conditions.

In this case the roots or pips were undoubtedly imported from Europe. In the condition received they represented the cultural skill of the growers from whom they were imported and therefore as pips simply, were not eligible for a certificate for they were not shown by the original grower. But the exhibitor who forced these pips into flower was eligible for there was an opportunity to display extraordinary skill in bringing them into flower. As I remarked in my previous article there was no more cultural excellence displayed than pertains to the regular practise of any careful grower and as there were hundreds of other subjects fully as well grown as the flowers in question, it would have been absurd to say the least to have singled them out for an award of this nature.

Now in regard to the display of *Lilium candidum*, we have the same conditions as regards the bulbs, but it was another matter with the flowers. We who were here and privileged to see and judge them were unanimous in our opinion of their quality. Only once before within my recollection of exhibition have I seen flowers of *Lilium candidum* approaching these in excellence. It may have been all in the bulbs but we doubt it very much and believe the hand that grew them was possessed of skill beyond the ordinary.

The lady speaks as though she thought it an every day matter to force *Lilium candidum* successfully but if her experience takes her back before the era of *Lilium Harrisii* she ought to know the difficulties encountered in their cultivation and that it was not from lack of beauty that their cultivation was practically abandoned.

A. H. FEWKES.

Chairman Committee on Plants and Flowers, Mass. Horticultural Society.

We have received from George Hollis specimen blooms of several of his seedling peonies, some of them blooming now for the first time. Among them are Old Ironsides, crimson magenta, a full flower without guard petals; Chieftain, light pink, wide guard petals and high centre; Pathfinder, soft pink and white, deeper flushed, a big loose bloom; Attraction, crimson purple wide guard petals and dense globular centre; Holly, rosy pink; No. 1031, Japanese deep pink guard petals and yellow tipped salmon filaments.

HARDY PLANT NOTES.

Even though the season has been exceptionally dry, shrubs and perennials have so far given an abundance of bloom. It may, however, affect the flower of the late blooming kinds.

A very good type of weigela, and somewhat new, is Abel Carrier. It has a growth similar to rosea, the flower being a beautiful rose color and not inclined to fade like other types. The *amabilis variegata* is prized for its variegated leaf, but the flowers do not show off to good advantage with such light-colored foliage. Eva Rathke has a deep crimson flower quite distinct from all others, and blooms a few days later.

The Yellow Rambler rose is fine, but as the blooms mature it is hard to associate the name with the plant, as the color changes to white. The buds are a good yellow and the flower opens a light yellow but fades to white. Its foliage is rich and glossy.

The Dawson rose is quite free—flowers rose-pink and about the size of a half-dollar. It makes a good hardy climbing rose.

It is too bad that the tamarisk is not used more extensively in shrubbery planting. The pink flowers always attract attention, and the delicate foliage is effective all through the season.

The writer saw a very pretty effect produced on the edge of an evergreen plantation by the use of *Enonymus radicans variegata*. This is often considered only as a vine, but if occasionally pruned it makes a pretty dwarf shrub.

Helenium Hoopesii is now in flower, and its color, a good deep orange, is quite distinct.

Iris "Silver King" deserves mention on account of its delicate fragrance and beautiful silvery color.

One of the earliest and showiest climbing roses is Paul's Carmine Pillar. It should be planted more generally.

Salvia nutans is making a pretty show at this period and can be recommended as a good perennial for cutting. It grows about three feet high and the pretty blue flowers have a graceful drooping habit.

An excellent time to separate and transplant the roots of the German Iris is when they are through flowering. They then make new roots and become established, thus insuring flower for next season.

In cutting peonies care should be exercised to see that not too much of the stem is cut away, as it tends to weaken the plant and reduce its flowers for next season.

WARREN J. CHANDLER

INCORPORATED.

The Griswold Greenhouse Co., Ashtabula, O. Capital, \$50,000. President, Thomas Fricker; vice-president, C. M. Stone; treasurer, J. L. Smith; secretary and manager, J. H. Rice. The establishments of Mrs. F. G. Beadt and J. H. Rice have been purchased by the company, and they propose to devote the plant to lettuce and cucumbers. Extensive additions and improvements are already under way.

WHOLESOME CHESTNUTS.

Better flowers, and plants of comelier form result if dahlias are grown with but one stem, and they are easily grown that way, even if the old tubers are planted, by just selecting one to go ahead and removing all the others. Dahlias are exceedingly susceptible to good treatment which consists chiefly, first in good soil and next in thorough cultivation of the soil from the time the plants are in the ground until frost nips the flowers and leaves. The best way to cultivate the soil is by frequent hoeing paying but little heed whether there are weeds there or not; raking does more harm than many are aware of, because it is apt to put a crust on the soil.

Chickweed is very annoying in the lawn and next to impossible to remove by hand, not to mention the expense when it has to be done on a large scale. Try raking before every mowing and see if by degrees it doesn't grow beautifully less.

On small places where nice paths easily trod are a prime consideration for the sake of comfort as well as appearance, it is a mistake to hoe them; better far to either pick out the weeds by hand or uproot them with a drawhoe than to dig up the gravel piece meal thereby softening the whole surface of the path; an occasional rolling helps also to keep paths in good order.

OBITUARY.

Hermann Rolker died May 28 at his Brooklyn, N. Y., residence after a lingering illness of nearly seven years. Mr. Rolker severed his connection with the firm of A. Rolker & Sons in 1903 after having been with them for about fifteen years, part of that time as a partner in the firm. He was 57 years old and leaves a widow and five children.

David Gray, for many years a leading florist of Brockton, Mass., died at his home in that city on the morning of May 28, aged 49 years. He had been in failing health for over a year. Mr. Gray was a native of Vermont, and came to Brockton, where he established himself in business, twenty-five years ago. At one time he held the position of city forester. He was a man of congenial temperament, and had many friends. He leaves a widow, one son and one daughter. His son, John C. Gray, is superintendent of Union Cemetery.

C. H. Kunzman, a highly respected florist of Louisville, Ky., died on May 22, aged 44 years. Mr. Kunzman had been in failing health for some time, but his death came suddenly and as a great shock to his friends and trade associates. He was a member of the S. A. F. and was for many years treasurer of the Kentucky Society of Florists, every member of which sincerely mourns his loss. He was a specialist in growing carnations and was very successful. He leaves a widow and one son. Burial was in Cave Hill cemetery.

H. W. Field, florist, of Northampton, Mass., has purchased from Dr. E. W. Higbee the block on Main street in which his store is located.

NEWS OF THE CLUBS AND SOCIETIES.

MASSACHUSETTS HORTICULTURAL SOCIETY.

Rhododendron Exhibition.

This annual exhibition was, a few years back, worth going a long distance to see on account of the splendid display of hardy and tender rhododendrons which practically filled one large hall; it has now almost lost its identity and its value as an exponent of rhododendron culture, for the entire display of these showy blooms this year occupied but a single table and the balance of the hall was monopolized by other things. It is not because rhododendrons are less grown, but apparently for lack of sufficient interest in the exhibition on the part of those who grow them. The small groups shown came from Mrs. J. L. Gardner, Mrs. A. W. Blake and George F. Fabyan, and the flowers were excellent so far as they went. Hardy azaleas made a gorgeous showing; Mrs. A. W. Blake, Mrs. J. L. Gardner, Wm. Whitman and T. C. Thurlow won the prizes. The Appleton silver medal was won by Hon. J. R. Leeson, James Cartwright, gardener, for a well-arranged group of orchids and foliage plants.

The collections of German irises from Wm. Whitman, the Blue Hill Nurseries and C. W. Parker were excellent, as were also the pyrethrums from Mrs. Gardner and Mr. Whitman. Interesting displays of foliage and flowers of hardy ornamental trees and shrubs were made by Mrs. Gardner and W. Heustis & Son, and a collection of hardy herbaceous flowers from the Blue Hill Nurseries was of the usual order of excellence shown in the exhibits by that firm. The tree peony exhibits were inferior.

J. E. Rothwell received certificates of merit for *Laelio-Cattleya* *Acis* (L. *tenebrosa* X C. *Mendelli*), and *Laelio-Cattleya* *Marguerite* (L. *purpurata* X C. *Mossiae* var. *vestalis*). The same exhibitor, E. Johanson, gardener, contributed a vase of *phalaenopsis* blooms of superb finish. T. C. Thurlow was awarded honorable mention for a new *viburnum*. Among the other prime attractions was a very extensive collection of hardy herbaceous flowers from Harvard Botanic Garden.

The next exhibition scheduled is the peony show, June 15 and 16, in connection with the exhibition of the American Peony Society.

HORTICULTURAL SOCIETY OF NEW YORK.

The Summer Show of the Horticultural Society of New York takes place on the 13th and 14th of June, in the New York Botanical Garden. On Wednesday afternoon Mr. George T. Powell will lecture on the importance of selection in propagation of plants. Exhibits of plants or cut flowers in season are requested, and should be sent to the Horticultural Society in care of the New York Botanical Garden, to arrive by noon on Wednesday.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Department of Plant Registration.

The Southern Floral Nursery Co., Fruitdale, Ala., submit for registration the following cannas:

Queen of Beauty; color, scarlet; foliage, dark green; height, 5 to 6 feet. A self trimmer.

Flashlight; bloom small, in close clusters; flame color; light green foliage; 7 to 8 feet.

Majestic; color, red; foliage, bluish green lined and ribbed with bronze; 7 to 8 feet.

Bronze King; an early bloomer; flowers, light red; leathery, bronze foliage; 6 to 7 feet high. A cross of *Marechal* *Valliant* on *Coronet*.

Giraffe; color, yellow, blotched and nearly covered with bright red; foliage, green, broad-leaved; 7 to 8 feet.

Moonlight; a seedling of *Mont Blanc*. Light cream color that does not fade to white; 5 to 6 feet.

Blushing Belle; blooms blush pink, narrowly edged with creamy yellow; foliage, chalky shade of green; petals, narrow; 5 to 6 feet.

Southern Pride; salmon tinted red, edged with light yellow; foliage, glossy green, edged with a narrow line of bronze; 4 to 5 feet.

Alabama; color, cardinal; 4 feet.

Mississippi; a dwarf; golden yellow flowers with a few red specks in throat; foliage thick and leathery; 3 feet.

Bucatanua; petals, 3-4 to 1 1-4 inches in width and 3 to 4 inches long, bright red; 3 to 4 feet high.

Gen. Kuroki; pink, salmon and yellow mottled and shaded; foliage, bronze; 5 feet high.

Tom L. Johnson; dark rose pink; leaves, deep purplish bronze; 6 to 7 feet.

Emerald; seedling of *Musafolia*; large, bright green leaves; 7 to 8 feet.

Perfection; seedling of *Lucilene* *Mailard*; light pink, marked on back of petal with a darker shade; 4 feet.

Daybreak; seedling of *Mlle. Berat*; shell pink, edged with cream; 4 1-2 feet.

Sunbeam; seedling of *Sensation*; large yellow flower, marked in centre with red; 4 feet.

Jumbo; bright scarlet; bronze foliage of mammoth proportions; 8 feet.

Gov. Patterson; rose pink; bright green foliage; 4 1-2 feet.

Chautauqua, Jr.; seedling of *Chautauqua*; scarlet red, bronze foliage.

Prize Essays.

Pres. W. F. Kasting offers three prizes of \$20, \$15, \$10, for 1st, 2nd, and 3rd best essays on "The best method of marketing the product of the wholesale plant and flower growers." The competition is open to all and essays must not exceed 1500 words each. Those wishing to compete are requested to send their completed manuscript to the Secretary not later than July 15. The manuscript should be unsigned, but the full address of the writer should in all cases accompany same. The awards will be made by a competent committee and the names withheld until after a decision has been reached.

WM. J. STEWART, Secretary.

FLORISTS' CLUB OF PHILADELPHIA.

An item not on the program—the regulation of the express companies—was the means of livening up an otherwise rather dull meeting. This issue was sprung by Edward Reid who thought the club ought to take united action on this constant non-suited of damage claims. The debate was taken part in by all the practised debaters and philosophers of the club; but the most incisive speech was that of W. K. Harris, who illuminated what looked like a complicated and mysterious subject with precision and despatch. The outcome of the debate was a committee on grievances consisting of Edward Reid, H. S. Donaldson, and George C. Watson, who are to see what they can do and act in conjunction with the National Society. President Thomas B. Meehan, spoke on the forthcoming convention at Dayton, and made some valuable suggestions as to strengthening and improving our national organization and gave eloquent testimony as to the good work in past years. Adolph Fahrenwald called attention to the International Horticultural Exposition to be held under the auspices of the society, and urged that jointly and severally we turn in and help to make it a success. We have never yet given an international flower show in this country but think the time is now ripe. But it will take work and money. Give both. Mr. Harris started a discussion as to whether the S. A. F. should be invited to hold its 1907 convention in Philadelphia. That matter is set down for debate at the next meeting of the club. Jno. Westcott, D. Rust and H. F. Michell were appointed a committee on transportation and G. C. Watson, Leo Niessen and E. J. Fancourt on hotels. The special subject for July will be a paper on the "Japanese Iris" by Ernest Hemming, with exhibits from different growers. The games committee announced a try-out contest of twenty games on home alleys commencing Monday the 11 inst. All active members eligible.

An exhibit of Peonies consisting of about 100 named varieties was sent by C. Betscher, Canal Dover, O., but did not arrive until the morning after the meeting. The trade had an opportunity to view them at S. S. Pen-nock's later.

NEW JERSEY FLORICULTURAL SOCIETY.

Harry O. May addressed the N. J. Floricultural Society on "Roses and Rose Growers" at their regular meeting on June 1, making therein an eloquent appeal in behalf of the American Rose Society of which he is treasurer, asking for co-operation particularly from the private gardener in interesting their employers in laboring through this organization for the most popular and generally beloved of flowers. Discussion upon cultural points was engaged in by Peter Duff, Geo. von Qualen and others.

A motion by Mr. May, was unanimously adopted, that the secretary be instructed to write to T. C. Platt of the U. S. Express Co. expressing the sentiment of the society in regard to the

recent oppressive and exorbitant rates imposed upon the growers of flowers in the State.

The floral display was large and included many fine orchids among which were a particularly fine *Cattleya gigas*, scoring 99 points, from Lager & Hurrell and a collection of white *C. Mossia* var. from Julius Roehrs Co., which received a first class certificate. A red, white and blue bouquet contributed by George Oakley, gardener for A. T. Gillispie, attracted notice. Fine oriental poppies came from Peter Duff and Wm. Reid, and crotons from President Kindsgrab. The judges for the evening were Malcolm MacRorie, Edward Roehrs and Arthur T. Caparn. JOSEPH B. DAVIS, Secy.

PENNSYLVANIA HORTICULTURAL SOCIETY.

An exhibition of peonies was held in Horticultural Hall, Philadelphia, on Thursday and Friday of last week. The lower hall was well filled, and while the number of exhibitors was not large the show was very creditable and interesting. The chief prize winners were Joseph Hurley, gardener to James W. Paul; R. D. Barclay, gardener to Clement A. Griscom, and William Robertson, gardener to Jas. W. Pepper. Mr. Hurley put up a large collection, embracing some seventy-five vases, all named, but we are sorry to report, very few of them correctly named. Mr. Hurley is not to blame for that, perhaps, but he ought at least to have looked in his catalogue to see if the flowers agreed with the description before staging them for the public to be misinformed. A horticultural society is supposed to be founded mainly for the education of the public along horticultural lines. That's why this naming business is more important than it looks to many. For instance, an amateur goes to the show we are discussing, and note-book in hand, comes to Mr. Hurley's exhibit. The most conspicuous item he sees is a magnificent vase of a large, lovely pink and white flower. He wants that one sure, and down goes the name—Dr. Caillot. But next spring imagine how he will feel when he sees the real Dr. Caillot in bloom a charming amaranth! What's the use of giving a flower show to spread such misinformation as that? Better no names at all than the wrong ones. Henry A. Dreer exhibited a collection of twenty-seven varieties. These were rather under the standard as to size, but so far as we could tell they were all correctly named.

CHICAGO FLORISTS' CLUB.

It has been a long time since this club has had a rousing old-time picnic. Fresh from the hustle and bustle of a busy season and flush with the substantial profits therefrom the members have agreed to have an outing that will fill all the requirements in refreshments, entertainment and recreation. As a result of the meeting of the special entertainment committee last Monday morning the famous Higginbotham woods at Joliet has been selected as the location and June 24 the date for the event. It will be a basket picnic and there will be baseball and other games, for which liberal prizes are provided.

Railroad tickets can be had of all

wholesalers by June 11. Everybody should secure a supply at once so the committee can conclude arrangements. Spread the news and make the gathering a big one.

AMERICAN PEONY SOCIETY

The third annual meeting of this Society will be held in Horticultural Hall, Boston, Mass., June 15 and 16, 1906. The exhibition will be in charge of Mr. James Wheeler to whom all flowers intended for exhibition must be shipped.

Express charges on all exhibits must be prepaid, and should be so marked on the boxes, as no charges will be paid by the manager.

Copies of the rules and regulations may be had on application to the secretary.

Premium list—Herbaceous peonies commercial classes—double:

Class.	1st.	2nd.	3rd.
1. Collection of varieties, one flower each.....	\$15.00	\$10.00	\$5.00
2. Twelve distinct varieties, six flowers each.....	10.00	5.00	
3. Collection of varieties in various shades of rose pink, not less than three nor more than six flowers each....	10.00	5.00	
4. Collection of varieties in various shades of salmon and flesh colored.	10.00	5.00	
5. Collection of varieties in various shades of white..	10.00	5.00	
6. Collection of varieties in various shades of cream white and light yellow.....	10.00	5.00	
7. Collection of crimson varieties, without stamens.	10.00	5.00	
8. Collection of crimson varieties, with stamens....	10.00	5.00	
9. Collection of tri-color varieties, including flowers with guard petals, collarette and centre petals of different colors....	10.00	5.00	
10. Fifty blooms, white.	10.00	5.00	
11. Fifty blooms, pink, any shade.....	10.00	5.00	
12. Fifty blooms, crimson.....	10.00	5.00	

SPECIAL PRIZES

13. Collection of six varieties introduced since 1896 one flower of each. Offered by The Gardeners' and Florists' Club of Boston.....	\$6.00	\$4.00
---	--------	--------

Amateur Classes Open to Amateurs and Private Growers Only

	1st.	2nd
A. Collection of not less than twelve varieties, six of each.....	\$10.00	\$5.00
B. Collection of white varieties, three blooms of each variety.....	10.00	5.00
C. Collection of rose pink.....	10.00	5.00
D. Collection of salmon and flesh pink.....	10.00	5.00
E. Collection of tricolor varieties.....	10.00	5.00
F. Collection of crimson.....	10.00	5.00
G. Six blooms of any one variety.....	3.00	2.00

Prizes offered by the Massachusetts Horticultural Society. Open to all, except No. 154.

No. 138. Collection of eighteen named varieties, single or double. First prize, a silver gilt medal; second prize, a bronze medal. Donated by Kelway & Son, Langport, Eng.

No. 139. Collection of thirty or more varieties, double, one flower of each.....	\$15.00	\$12.00	\$8.00	\$6.00	\$4.00
No. 140. Collection of twelve named varieties, double, six flowers of each.....	\$12.00	\$8.00	\$6.00		
No. 141. Specimen bloom, double.....	\$2.00	\$1.00			
No. 142. Collection of twelve or more named varieties, single.....	\$4.00	\$3.00	\$2.00		
No. 143. Collection of twelve or more named varieties, Japanese single varieties destitute of pollen.....	\$4.00	\$3.00	\$2.00		
No. 144. Vase of blooms on long stems, arranged for effect in the Society's large China vases.....	\$10.00	\$6.00	\$4.00		
No. 145. Collection of six named double varieties, white, one flower each.....	\$3.00	\$2.00	\$1.00		
No. 146. Collection of six named double varieties, rose pink.....	\$3.00	\$2.00	\$1.00		
No. 147. Collection of six named double varieties, salmon pink.....	\$3.00	\$2.00	\$1.00		
No. 148. Collection of six named double varieties, red or crimson.....	\$3.00	\$2.00	\$1.00		
No. 149. Collection of six named double varieties, any other color.....	\$3.00	\$2.00	\$1.00		
No. 150. Vase of twenty-five blooms, double, white or blush.....	\$5.00	\$3.00	\$2.00		
No. 151. Vase of twenty-five blooms, double, pink or rose.....	\$5.00	\$3.00	\$2.00		
No. 152. Vase of twenty-five blooms, double, red or crimson.....	\$5.00	\$3.00	\$2.00		
No. 153. Vase of twenty-five blooms, double, any other color.....	\$5.00	\$3.00	\$2.00		
No. 154. Collection of twelve named varieties, double, one flower of each, open to non-commercial growers only.....	\$6.00	\$4.00	\$3.00		

Officers: President, C. W. Ward, Queens, N. Y.; vice-president, Wm. A. Peterson, Chicago, Ill.; treasurer, J. H. Humphreys, Germantown, Pa.; secretary, A. H. Fewkes, Newton Highlands, Mass. Manager of exhibition, James Wheeler, Horticultural Hall, Boston, Mass.

NEW YORK FLORISTS' CLUB.

Next Monday, June 11, will be Ladies' Night, also Peony Night, at the meeting of this club. Extraordinary preparations are being made by the proper officials for social enjoyment and the promise is for a gala occasion. It is expected that the exhibition will be, in all respects, a notable one.

MISSOURI STATE HORTICULTURAL SOCIETY.

The semi-annual meeting of this society will be held in the court rooms at Moberly, Mo., June 12, 13 and 14.

The Merchants Hotel will be headquarters. Rates will be given, \$1.50 per day. The Oliver and other hotels will make a rate of \$1.00 per day.

The railroads will give a rate of one and a third, on certificate plan, for round trip from all points in Missouri.

PUBLICATIONS RECEIVED.

The twenty-third annual report of the Board of Park Commissioners of Minneapolis, Minn., has been received. It is a finely printed volume of eighty pages containing much interesting information regarding the comprehensive park system under construction for Minneapolis, and many beautiful half-tone views. A portrait of ex-Superintendent Wm. M. Berry forms the frontispiece. An explanatory map is bound with the volume.

From Spokane, Wash., comes the report that the demand for Decoration Day flowers went far ahead of all previous records, the supply being entirely exhausted by noon on the day before. Customers have never been known to buy so liberally as they did this year.

SAN FRANCISCO NOTES.

April 18, and the manner of its coming to San Francisco, is still the talk of the town, and it is likely to be for some time to come. But that another day like it will never again be ushered in in these parts while the present plantsmen and floriculturists remain, they feel fully assured. They base this reassurance, they tell me, on faith they have in such scientific authorities as Dr. F. Omori, reputed to be a professional grower of fancy chrysanthemums, also professor of seismology at the Imperial University of Tokio, and whose invented seismometer is in use in the weather bureau office in Washington, and John C. Branner, professor of geology at Stanford University. These two wise men have been here ten days studying earthquakes and making deductions, and this week publicly announced that although differing as to their conceptions of the cause of the great earthquake here last month they are perfectly agreed in stating without qualification that there cannot be another destructive shock within a thousand miles of San Francisco before the year 2015!

Additional to the resumption of business by tradespeople reported last week two more of the prominent antecalamity growers and florists are now to be added to the list, namely, Pelicano, Rossi & Co., formerly Frank Pelicano & Co., at 1944 Post street, in the unburnt district, and Alex. Mann, Jr., also in the unburnt district, at 2041 Pine street.

That more than \$50,000 damage was done by the earthquake to the buildings in Golden Gate Park was made known at this week's meeting of the park commissioners. Satisfaction is found, however, in the fact that the commission directed that the work of restoration proceed immediately, funds being available. Senior member of the commission, Mr. Lloyd, said he had observed the good charitable work of Superintendent and Mrs. McLaren in aiding the streams of people that took refuge in Golden Gate Park during and after the conflagration, and upon his motion a vote of thanks was tendered the superintendent and his wife.

Professor C. M. Woodworth of the Department of Entomology at the State University is just now in receipt of an appeal from the horticultural association of Stanislaus county for aid in combatting a plague of grasshoppers, whose present devastating operations are much earlier in the season than has been their habit.

The Santa Clara County Grange this week endorsed the action of the recent mass meeting of local growers and voted to hold this season's crop of prunes at a 31-2-cent basis; also requested the board of supervisors to create the office of county entomologist.

A phenomenal weather feature the past last week of May was a soaking three days' rain storm, resulting in great damage all over the state to cherries, berries, and the hay crop. It was a phenomenon for the reason that the month of May has always been reckoned as a "dry season month." Nearly all of the receipts of cherries and the bulk of the arrivals of berries were rain damaged and had to be sold for what buyers cared to pay. Large

lines of loose cherries were turned over to the cannery at the inside quotation and great quantities of Malinda strawberries had to be thrown away. Cherry plums from Vacaville sold at 75c. per drawer and early Alexander peaches from the same place were sold at \$2 per box.

Heart aches are affecting many San Francisco florists because of the dilatory action of insurance companies in paying policy holders, and what the outcome will be the Lord only knows. It is unfortunate for this crushed community at this time that we are finding that there are both "good" and "bad" insurance companies, and it isn't much consolation to the "insured" who need their money that the State Insurance Commissioner is drawing up a "good" list and a "black" list of insurance companies which have losses in San Francisco and will send them to every insurance commissioner in the United States and to every newspaper that will print them. There are instances of good California men who have been acting as Pacific Coast agents of eastern insurance companies sending in their resignations because the companies wanted the agents to compromise with the policy holders on a basis of 75 to 80 per cent.

PHILADELPHIA NOTES.

S. S. Pennock has moved his ribbon and supply department from the second floor of his building to the main floor of the new annex thus providing concentration and economy, for his rapidly growing interest.

George C. Watson has moved his offices to the Dobson Building, 9th and Market. He is now sole agent in the United States and Canada for the well-known growers of fancy grasses; Barenbrug, Burgers & Co., of Arnhem, Holland; also Philadelphia representative of J. C. Vaughan, Chicago and New York, Western Springs Nurseries, and Horticulture Publishing Co., of Boston.

The sympathy of the trade is extended to Mr. Maull, late of the Peacock Company at Atco, on the death of his wife. Many of the leading members of the trade attended the funeral on the 4th inst.

Mr. McKubbin of Dreer's, with Mrs. McKubbin will start next week on a three week's vacation to Newfoundland. The way the prospect is painted by Mr. McKubbin makes us register a vow to take that trip if business will only let up long enough.

Among the latest new building projects we hear of are an addition of two houses by Fred Aicher, Clifton Heights, and one of three houses by Jacob Becker. Lord & Burnham Co., through their Philadelphia representative, D. T. Connor, have secured both contracts.

A. E. Wohlert, Bala, has sub-let the greenhouses to his brother Emil and will devote himself henceforth to the landscaping end of the business.

A voluntary bankruptcy petition has been filed in the United States District Court by Edward C. Holmes, florist and seedman, of Broadway, Somerville, Mass. His liabilities are \$31,245, and his assets \$9372. There is one secured and 400 unsecured creditors.

NEWS NOTES.

The Central Floral Co., Chicago, are to be located at 68 State street.

The Twin City Pottery Manufacturing Co. of Minneapolis, Minn., has taken the business of the Swahn Pottery Co.

Thomas Hall of Minneapolis will start a business of his own, having left his position with the Lakewood Cemetery Association.

Involuntary bankruptcy proceedings were filed in the United States court against the Hugh L. Aumann Co., Inc., of Norfolk, Va. The Philadelphia Cut Flower Company and the Leo Niessen Company are among the creditors.

A five-acre field has been planted to sunflowers by Rood Bros., Lake Park, Ia. A corn planter was used and the cultivation will be the same as corn. Rood Bros. are reported to have contracted to sell their entire output to a seed house at from \$1.75 to \$2 per 100 pounds. A yield of 1500 pounds per acre is expected, which at \$1.75 per hundred weight will bring \$26.25 an acre.

The report of Dr. Clinton, botanist of the agricultural station at New Haven, Conn., has just been issued. It contains notes of new fungous diseases which have appeared within the year in this State, and two papers containing critical studies of the mildew of lima beans and the potato blight. Copies can be secured by applying to the Connecticut Agriculture Station, New Haven, Conn.

Among the charges made before the Drake investigating committee at Cincinnati was the alleged sale of flowers from the city parks by the former park superintendent. Quite a number of the local florists have been notified to appear before the grand jury, and while no information as to what they will be asked to testify is given out the inference is that this disposition of the flowers is the matter under investigation.

The Southern Floral Nursery Co., now located at Fruitdale, Ala., has been incorporated as a stock company with capital of \$30,000. The headquarters of the company will be removed about Aug. 1 to Bucatanna, Miss., the nurseries at Fruitdale and Fairhope will be extended, and it is planned to establish branch nurseries throughout Alabama and Mississippi in such communities as will subscribe for at least \$5000 worth of stock.

We are in receipt of a pleasant letter from Green's Nursery Company of Rochester, informing us that the fire of the past spring, while it inconvenienced them considerably, coming in such time as it did, was not so disastrous as first anticipated, as the records being complete gave them an opportunity of corresponding with those patrons whose orders were destroyed in the fire, thus saving the annoyance and inconvenience that would have occurred had the records of these orders been destroyed. They have now completed the remodeling of the building and are again located therein.

FIELD NOTES ON PEONIES.

The following notes were taken Tuesday, May 29, at Dreers' nurseries, Riverton, N. J. While peonies were several days earlier around Philadelphia than usual this season, Riverton seems to be later. Whether it be the light soil or some climatic condition Mr. Eisele was unable to say. The writer examined all that were in bloom as to size and quality of bloom, vigor of growth, length of stem, and freedom—the four qualities that appeal most to the commercial florist. In considering the first requisition many very beautiful varieties were passed by on account of their unadaptability for shipping purposes. In all, some three hundred varieties were examined, but only the best and most striking are commented on in these notes.

Asa Gray; blush pink of finely imbricated form, guard petals salmon flesh, center deeper and flaked with lilac and carmine; introduced by Crousse in 1886.

Achillea; this variety was not in bloom; Rosenfield's Marie Lemoine is said to be identical.

Beaute Francaise; blush pink with carmine spots; well adapted for shipping purposes.

Belle Douaissienne; rose pink collar, soft rose shading to white center; fragrant.

Belle Chatelaine; pink with white center.

Caroline Allain; pink collar, center flesh changing to white; rose scented.

Festiva (the original variety introduced by Donkclair in 1838—not Festiva Maxima introduced by Buyck in 1851); not as large as F. Maxima; a good shipper, known as the "Drop White" around Chicago; ivory white, with dot in center. Many growers have this variety under the name of Festiva Maxima.

Andre Lauris; deep bright rosy red, very double.

Abel de Pujol; deep rose shading to pink, high full center.

Amandine Mechin; most of the good double crimsons are late, this one is among the earliest; high full center, no collar.

Ambroise Verschaffelt; deep crimson, large; a useful cut flower, but has a touch too much of magenta.

Delachii; deep crimson shading to purple; one of the best of the dark class.

Dela cour Verhille; white with blush collar, broad petals, very fragrant.

Duke of Wellington; white with high center and large collar, long, strong stems and very fragrant. Many inferior sorts are masquerading under this name. Care should be taken to get only the true variety.

Duchess de Nemours; showing up well but the buds had not opened. (We saw it in fine condition at Horticultural Hall two days later. It is a grand white).

Duchess de Orleans; Kelway describes this as a pale rosy lake with salmon center; Ward says it is a deep pink with violaceous tints on center petals interspersed with salmon; that sounds a whole lot different to read, but its a good pink all the same.

De Boisduval; rose, very fragrant.

Eugene Verdier; flesh with white center, vigorous grower, long stems and free.

Festiva Maxima; good as ever, fully

FIELD OF WHITE POTTEBAKER TULIPS IN HOLLAND.

a week earlier than Duchess de Nemours, and ranks first as an early white to date. Introduced some 55 years ago, some say by Buyck, others by Meillez.

Francois Ortegal; deep crimson very richly colored, fragrant.

Felix Crousse; bright carmine.

Grandiflora alba; not very good as to color but a fine flower.

Golden Harvest; straw color with blush collar a very sweet and showy peony, probably the nearest approach to a yellow.

Globosa; light bright pink with chamois center; well named.

Humei Carnea; we would not mention this one except that it is largely grown for cut flowers in some sections, notably around Chicago. It is too ragged for commercial purposes when we have so many other good pinks that are preferable.

Lady Leonora Bramwell; soft rose, high center, fragrant. There are few in its color that are more satisfactory than this well-known variety.

L'Esperance; vivid rose colored flower, high center, very compact, early, free and highly perfumed.

La Brune; deep crimson with golden central petals. Although of the Japanese type with large collar this looks like a good commercial sort if cut early. Its charming form and color would make it sell on sight if offered to the retailer in good shape.

La Tulipe; cup-shaped, white with carmine stripes, long stems, standing upright, well above the foliage. There is nothing quite so distinct and characteristic as this variety. One can name it instantly among a thousand.

La Coquette; rose, bloom not extra large but a good cut flower variety.

Marie Houillon; light satin rose, pink collar and high full lighter center. Rose-scented.

Madame Warroneiz; rose guard with carmine center.

Madame Courant; blush white with pink collar; long stems.

Madame Furtado; rosy carmine,

center petals tinted salmon rose, highly fragrant.

Madame Forel; rosy lake, beautiful rounded flower, borne on long, strong stems.

Madame de Vetry; creamy white with pink guard petals, fragrant.

M. Paillet; delicate pink.

Modeste Guerin; cherry rose.

Mme. Barillet Deschamps; rose shading to white; as a commercial sort this one is worth watching.

Mlle. Rousseau; white delicately shaded cream.

Madame de Verneville; white with carmine dots, very compact flower.

Rosa superba; (not the officialis variety), bright rose.

Zoe Calot; delicate rose with lighter center, very durable.

Virgo Maria; at first sight one would call this Festiva maxima but the dots are not so near the center and the petals are more scalloped.

Mme. Calot; delicate flesh shading to white, collar rose-tinted.

GEORGE C. WATSON.

Geranium Queen of Pinks is a new bedding variety sent out by an English firm this season which is highly spoken of as to its habit, color, and floriferous qualities. We may see it next season.

Ho! All Ye Peony Lovers!

See my new creations in peonies at my gardens, South Weymouth, Mass., up to Wednesday, June 13, or at the peony show, Boston, June 15, 16.

GEORGE HOLLIS, Peony Specialist.

We shall have to hand in one week's time a large importation of Cattleya Schroederiae and Mendelli.

TOLEDO PREPARES FOR THE CONVENTION.

The latter part of this month will see the seedsmen assembled here in convention and Toledo will try her very best to make this convention one which the visitors will not so easily forget. Toledo has been gaining in favor as a convention city very much of late years; she offers a good many attractions and the beautiful and picturesque Maumee river as well as Lake Erie help much to make her a popular spot.

A committee has formed itself among the local seedsmen for the entertainment of the visitors, and they will put forth every effort to make it pleasant for all. This committee is composed of Messrs. Henry Philipps, Wm. T. Philipps, Chas. Burge and Rad. Burge of the F. W. Flower Co., and W. H. Marshouse, and they have great plans. A moonlight trip for several hours will follow the first day's busy session and all members are expected to take part in it with their ladies. This excursion will be on Lake Erie in one of the big lake steamers and will just last long enough so as not to tire the people out. The entertainment planned for the second day will take the visitors in comfortable trolley cars ten miles up the river on one side and back again on the other that they may see what beautiful surroundings Toledo has. This Maumee river is very wide in some places and numerous islands enhance its beauty. The third day's entertainment will be a banquet worth attending, even by those who are used to such affairs; the committee has set its heart on making this a success from all points and thus to wind up the convention in a fitting way.

As first-class hotels may be recommended the Boody House, St. Charles, St. Clair, Jefferson, Wayne and De-veaux, and should anyone wish further information he may address any of the gentlemen of the committee.

A PHILADELPHIA SEEDSMAN.

There was a planked shad dinner given at a boat club near Philadelphia recently. Each guest had his picture

done in water colors on the menu. As the artist had never seen any of the said guests he had to draw on his imagination. One of the guests was a Philadelphia seedsmen. The accompanying picture is not very flattering, but the fact that the seeds are sprung 6 feet high and in bloom by the time the hind leg of the sower gets out of the way makes amends, and illustrates forcibly that Burpee's are not the only seeds that grow and grow quick. We refrain from giving the seedsmen's name, but can assure our readers that this is not one of the "wonderfulness of

BUSINESS CHANGES.

Bonnet & Blake, located heretofore at 26 Boerum place, Brooklyn, will be found hereafter at 106 Livingston street.

Nicholas & Reichard, rose growers of Madison, N. J., have dissolved partnership. Mr. Reichard has taken the Connelly greenhouses.

The Finleyville Floral Co. is the name of a new concern that will carry on business in Union Township, near Finleyville, Pa. Capital stock, \$3000. A. T. Linn, E. Garland and C. Fritchman, stockholders.

J. A. Toner, of the firm of Toner & Sanborn, S. Burlington, Vt., has purchased his partner's interest, given up the store on Williams street, and will do business at the greenhouses on Main street under the name of J. A. Toner & Sons.

The Chase Nursery Co., recently incorporated, will locate at Mercury, Ala., and establish a fruit nursery. The Alabama Nursery Co., in which the incorporators of the new company have been interested, will continue under the management of Herbert Chase at Huntsville, Ala.

PERSONAL.

Miss Ada G. Meehan, daughter of William E. Meehan, of Germantown, Pa., and Warren J. Chandler, were married on Saturday in Grace Episcopal Church, in Gowen avenue, Mount Airy. The ceremony was performed by the Rev. Simon C. Hill, rector of the church. The bride who was given away by her father, carried white roses and lilies of the valley. The matron of honor carried pink peonies, and the bridesmaids pink sweet peas. The flower girls carried baskets of flowers.

We applaud Miss Meehan's wise selection of a life partner. Mr. Chand-

ler is a nice boy and correspondent of HORTICULTURE.

Mr. and Mrs. Chandler will reside at 30 East Pleasant street, Germantown.

NEWS NOTES.

The Aurora Nursery Co., Aurora, Ill., have opened an office at the corner of Fox street and Broadway.

The Southern Floral Nursery Co. of Fruitdale, Ala., whose sale of the famous canna Queen of Beauty to the Frank Cummings Bulb & Plant Co., has been so widely advertised, now announces that their interest this year will centre in Fairhope, a canna which promises to be a money maker.

CUT FLOWER MARKET REPORTS

BOSTON No sooner had the effects of the Decoration Day onslaught passed away than this market was back again into a condition of congestion even worse than the period that had preceded that holiday. It is doubtful if ever before in this vicinity such an unwieldy surplus was thrust upon the dealers. The quoted prices in this issue really have little application when the situation in the aggregate is considered, for vast quantities of roses and carnations, including those of the finest grades, have been unloaded at from five to seven dollars a thousand and, even at that, the buyers are looked upon as philanthropists. Lily of the valley which ought to sell well at this date is also badly overstocked. Peonies are beginning to come in abundantly and will soon add their bulk to the heavy overstock being carried from day to day. The wholesalers are puzzled to know what to do with the stuff that is being thrust upon them.

Up to Monday, May 27, **BUFFALO** the market was overstocked on everything, as previously reported, but from that time on everything in the line of cut stuff that had been carried over for days began to move at a good pace. The shipping trade was excellent and the weather ideal for carrying the stock to destination. Roses were in good supply and demand generally fair; no advance in prices. Carnations were a little short on supply; roses were a good substitute in many cases. Outdoor lily of the valley was overflowing, though a good amount was disposed of. Outdoor stock moved well; Harrisii were also good sellers. No special demand on Beauties, although enough were on the market if wanted. Peonies were on the list and the best quality sold well; home grown stock held back by cold weather. Cape Jessamine plentiful but no extra demand. For plant decorations the most in demand were geraniums, pink being favorite color and Poitevine the variety in greatest demand. There has been a heavy demand on all bedding stock this spring. Since Decoration Day and up to Monday business has been brisk and the market healthy, but at time of mail-

ing report, June 5, carnations and other stock are abundant.

CINCINNATI Reports indicate that business is somewhat better than usual for this time of the year. The demand for Memorial Day was a pleasant surprise to most of us. Everything in the line of cut flowers was disposed of, which is saying a great deal, as outdoor stock, especially peonies, was plentiful. Peonies met with great favor with the public this year and this showy flower will be grown more extensively another season. Some good Beauties are being shipped into this market now, but all tea roses are quite small. Prices are now down to the summer basis, but stock in most cases is bringing about all that it is worth. Lily of the valley is coming in fine and is selling well. The same is true regarding lilies, but the latter are being sold at a figure which leaves but little profit for the grower.

Getting ready for and **COLUMBUS** taking care of the Decoration Day trade was, of course, the great feature of last week. As has been the case in this city with other holidays—the business done last Wednesday was far in excess of what had been planned for, and largely ahead of the business a year ago. One special feature was the large number of orders that were placed, and the sales that were made the day before; in fact, so enormous was this advance sale, so to speak, that very little stock was left for the sales of the day itself—some of the florists were practically cleaned out the night before. Peonies were a great feature and, in fine form, we had had them for several days, but they came in so near the holiday, that growers held them back all they could knowing a better price could be obtained Decoration Day. This gave us immense quantities of them, but there was not enough to supply all, so great was the demand. Carnations were in splendid demand—the supply was grand also—but even at the advanced rate, the sales continued steady and strong. Other flowers went well and at good prices, but peonies and carnations were the leaders. There was very little hardy outdoor stock in the market, and many of the craft think

that it was this cause which threw such an immense business into florists' flowers. Whatever the reason, an elegant business was done, as the empty ice chests most eloquently testified. It is always a hard thing to say how trade compares on any holiday with previous years, but it seems to be agreed that we had the best Decoration Day in the history of this city.

All the florists, **INDIANAPOLIS** both wholesale and retail report a most excellent Decoration Day business, especially the cemetery florists and those that control an out of town trade. It was a harvest for the peony growers, as the crop was just at its height. Abundance of stock was to be had in all lines and by noon Wednesday everybody was practically sold out. The majority report the best season they have ever had.

Business the past week was fairly active for the season. Following Decoration Day bulky subjects, such as peonies and low-priced items like carnations were most in demand, but later in the week better qualities were called for. Good American Beauties enhanced considerably in value and were scarce. Kaiserin has the call in the white class and Killarney among the pinks. Lily of the valley and cattleyas in good shape and in excellent and steady demand. Centaurea imperialis, which is used mostly in decorations, has fine long stems and comes in pink, white, yellow and lavender. Peonies are still a strong feature in the market. For Decoration Day considerably more were used than last year. The wholesale houses were working until 10 p. m. on Sunday sending out wagon loads to northern and western points less climatically favored. The supply was ample except in white. Here is a point not yet sufficiently impressed on the peony growers. Plant plenty of whites—all the good ones early, mid-season and late. Officialis alba, Festiva Maxima, Duchess de Nemours and Duke of Wellington are among the good sorts of white giving a succession. Dealers state that the peony has made a trade for itself and does not hurt the regular sale of other flowers. Among the new items seen around are moss roses and Scotch pinks.

CUT FLOWER MARKET REPORTS. (Continued.)

LOUISVILLE Business conditions were generally satisfactory last week. Carnations and roses continue to come in sufficient quantity to meet all demands. Peonies and sweet peas are abundant and there is a steady call for them. Lilies and lily of the valley may be had in small quantities, with a light demand. In other stock the supply and demand are about equal.

OMAHA The plant and cut flower trade have been far better this season than in any previous year. Decoration Day trade was even more than the florists could handle. There was an abundance of flowers of all kinds early, but the big shipments necessary to meet the out of town demands soon caused a shortage of carnations and good roses.

SAN FRANCISCO The propitious commingling the past week of Memorial Day, school closing days and a surprising number of weddings had a happy trade effect—the first resumption since the holocaust of a market value for flowers. Memorial Day needs especially created the demand, and the few re-established florists found sufficient warmth in the traffic activity that coats were laid aside. This day has always rated well among the few big flower-selling days of the year. Some of the growers wisely remembered this, and the further fact that all the banks opened the Monday preceding the day for remembering the dead and depositors were privileged to draw on their accounts at will, and therefore thousands of people whose home flower gardens were burned would be in funds but have no flowers for their dead. The growers made no mistake in their reckoning and ceased from their custom since the earthquake of letting their posies dry out and brought in to the city florists a vast amount of stock to be paid for if sold. It was not enough, the flowers and greenery they brought. Everything was cleaned out, and, take it all in all, the Memorial Day floral business in San Francisco was almost equal to late like occasions before the disaster.

Among the recent contracts secured by the Pierson U Bar Company are ranges of U bar houses for C. E. Riley, Newton, Mass., and A. R. Harris, Irvington, N. Y.

A USEFUL ARTICLE.

Ocean City, N. J., June 2, 1906.
HORTICULTURE, Boston, Mass.

Gentlemen:—I have just finished an examination of HORTICULTURE of above date, a pleasure afforded me occasionally through the courtesy of a subscriber. Next to the regular contributions, editorial comments, etc., which are always good, I was interested in numerous and helpful advertisements, prominent among which is the one on last page for a weed-killer. I can give testimony both as to the efficiency and economy in using this particular preparation. We have at our summer residence here, a long asphalt pavement, which for years has given us trouble because of the weeds and grass that grew there, and which we had given up as a hopeless case until we applied this particular brand of Weed-Killer. The result was instantaneous, and now after a year since its application no vegetation of any kind can be seen. I lay particular stress on the economy of the preparation, because of the time and money spent in trying to exterminate them with a hoe, plantain pullers, etc.

Very respectfully,

(signed) MARY KELLY.

The Standard Steam Trap

Certificate of merit awarded at Washington, D. C.,
Florists' Convention. For simplicity, durability and per-
fect satisfaction it has them all guessing. It is
in a class by itself. To see it work a large
plant as well as a small will convince the
most sceptical that it is the Florists' Friend.

The Standard Ventilating Machine still
leads as the most durable, easiest working and the
all-around satisfactory machine.

The Duplex Gutter is gaining all the time, over
12,000 feet sold thus far this season. Catalogues free.

E. HIPPARD, Youngstown, Ohio

GREENHOUSE REASONS.

Reasons are plentiful why **Premiers** are the best built. They are portable as well as durable—artistic as well as modern. You can see its superior outside points by its appearance; — the inside points of supremacy are proved by long wear — honest wear. They're all the same, from smallest to largest. — none of them ashamed to show their ins as well as their outs. We have had experience in greenhouse construction — that's the reason. Send for illustrated booklet No. 45.

HORICUM

KILLS SAN JOSE SCALE

Made by **HAMMOND'S SLUG SHOT WORKS,** Fishkill-on-Hudson, N. Y.
SOLD BY SEED DEALERS OF AMERICA.

Glenside, Pa., March 31, 1906.

HAMMOND'S SLUG SHOT WORKS, Fishkill-on-Hudson, N. Y.

Gentlemen: Seeing "Horicum" mentioned in Monthly Bulletin of Div. of Zoology, Penna., I would thank you to inform me where I can get a supply, say about a gallon for trial.

The San Jose Scale is very bad around this section and could no doubt push sale of the solution, especially as it is spoken of so highly in above Bulletin.

Your early reply will oblige. Yours respectfully,
P. S. Glenside is twelve miles from Philadelphia.

H. J. HINDS.

H AND C

The Two Q's

of this greenhouse price competition seems to be **QUANTITY** and **QUALITY**. Quantity is the dust that the "just as good" man throws in your eyes. Quality is what we base our "buy of us" reasons on.

Our price is right for the right quality—and we want to do business only with the man who wants a greenhouse of endurance—one that's not an everlasting bill of repair expense.

. IT IS A GEM .

All the new ferns have **some** good qualities, but
only one has **all** the good qualities. That one is

NEPHROLEPIS WHITMANI

Every frond is perfect. Never reverts to type. It grows and increases as rapidly as the old Boston. Makes a symmetrical plant in any size pot from 2 1-2 inch up. Its superiority is acknowledged by the introducers of the other forms of Boston fern. Received a unanimous report of superior merit from the Gardeners' and Florists' Club of Boston on February 20 last. The Massachusetts Horticultural Society on March 24, at their big spring show, honored it with a Silver Gilt Medal the highest award made to any of the numerous novelties exhibited.

Buy now and get the advantage of having a good stock to sell while it is yet a novelty. Orders filled strictly in rotation. Heavy advance orders are now in hand.

Prices, \$25 per 100; \$200 per 1000. 500 at 1000 rate

H. H. BARROWS & SON
WHITMAN, MASS.

WE ARE HEAD-
QUARTERS FOR

PRINCESS VIOLET STOCK

The *Princess of Wales* is still the leader of all single violets. There is no other variety on the market that can compare with it as a commercial violet because it blooms from Sept. 15th to May 1st; every bloom is marketable. It has size, it has color, it has length of stem. It has fragrance. It sells when any other variety, single or double, can not be given away. The people want it.

So great is my confidence in this violet that the following Autumn I will devote 80,000 feet of glass to the growing of this variety.

I have about 200,000 nice young divisions now ready to ship at the following prices:

\$2.00 per 100

\$15.00 per 1000

500 at 1000 Rates

Lots of 5000 at \$14.00 per 1000

Lots of 10,000 \$13.00 per 1000

THORNTON BROS.,
LAWRENCE, MASS.

Some People have taken our ad-

vice as published in

these columns recently and are buying **My Maryland** for trial. We reiterate here—if it succeeds with you as it does with us, it will prove the best white carnation you ever grew. Despite the variety's apparent failure in several places, we strongly advise all growers to give it a trial. We have been frank about its faults as developed in other places. We doubt if these will develop in many places.

Jessica we believe, will succeed generally and will prove to be the best red and white variegated ever disseminated. Few varieties show as strong constitution as this one does and it is a wonderful producer. Extra fine stock of both varieties ready now. R. C., \$2.50 per doz., \$12.00 per 100; \$100.00 per 1000. Pot plants, \$3.00 per 100 extra.

Filmy Ferns

HYMENOPHYLLUM DEMISSUM

TODEA PELLUCIDA
(Hymenophylloides.)

TRICHOMANES RADICANS

We spoke in a few articles about the most desirable ferns for general use; the list is far from being complete, but there are many, such as *gymnogramma*, *gleichenia*, *cheilanthes*, *pellaea* and others which are more properly collection plants. We close our little review with a few words on filmy ferns.

Filmy ferns are certainly the most delicate and the most interesting things to grow in dwelling rooms where they grow luxuriantly and require very little care. They have naturally to be grown under glass bells or glass cases and in a place where the sun can not strike them; they can be grown in pots or planted in a little rockery. Being slow growers and keeping their old fronds for years, when once planted and not disturbed, they will last and prosper for a long time. The box or pan or jardiniere which is to be covered with the bell glass or glass case has to be lined with zinc and filled with broken stones; if grown in pots these pots are put on top and the space between filled out with clean moss. If a little rockery has to be built, the stones are covered with a layer of turfy soil and the stone work built over it. These stones have to be sandstone or other porous stones which will absorb the moisture easily and where the rootstalks can climb. A few pieces of cork bark can be mixed with it. The whole construction has to be made with taste. Little soil has to be used and that must be porous. Sandy peat is the best. Once planted, a little fresh moss can be added, then the bottom is filled with water and the glass cover put tightly over it. They have to be let alone; there is no need whatever to lift the glass cover, only when it is necessary to put fresh water in the bottom and that is seldom the case, the condensed evaporation dropping back, except what is absorbed by the plants. Filmy ferns have been grown that way with better success than in greenhouses where it is generally too warm and where a special corner has not been prepared for them.

Filmy ferns are found in nature growing in cool situations surrounded by very damp atmosphere. New Zealand and Australia are their headquarters. Some are found in the Andes of Chili, in the mountains of East and West Indies, a few in the United States or in Europe. Those from Central America and South Sea

Islands require more heat. They are found climbing on the foot of tree ferns and over fallen trees; some creep in the moss, some grow over damp roots. The *todeas* are the only ones which grow in decayed wood and leaf mould. A little cool cave or a miniature ravine built in a corner of a conservatory where moisture enough can be obtained and planted with filmy ferns is a sight never to be forgotten.

A good way to grow them also is a pit three to four feet deep, with cement bottom to keep one or two inches of water, covered with sashes a little higher than the surrounding ground. A rock work can be built in it, but growing in pots is handier on account of the relatively small place, and they do not like to be disturbed. If pots are used half pots are the best, and they have to be put on bricks or reversed pots to keep them out of the water. That pit must be built on a shady north side or under a big spreading tree; in winter it can be covered with straw mats; the plants not being near the glass a few degrees of frost will not hurt them.

With a good drainage, the compost to plant them in is a mixture of broken sandstones or soft bricks with sandy peat, chopped sphagnum and coal dust. For those with thin hairy creeping rootstocks like most *hymenophyllums* the pots when filled with that mixture can be covered with fresh sphagnum and the plant put on top of it with a few hooks to make it hold; the rootstock must never be buried under the soil. For those with thick rootstocks which climb over rocks, like *trichomanes*, after being put on top of that mixture, the pot has to be filled up with the same stones between the roots. *Todeas* want more soil, but very porous, and drainage enough to avoid danger of stagnant water on the roots.

Filmy ferns want to have their fronds always moist; if once withered they come to life no more, but they should not be sprinkled. The surroundings must be kept moist enough so that the condensed evaporation keeps the fronds moist; it is only in very dry weather when dampness enough can not be kept that sprinkling with soft water is necessary, but it does more harm than good. They are never nicer and healthier than in the fall when the cool air is bringing much condensation and

the fronds are dripping with moisture. Being always surrounded by dampness, they do not need much watering but that has to be looked after anyway.

Filmy ferns are represented only by three genera *Hymenophyllum*, *Trichomanes* and *Todea*. They are all of very delicate texture, have only mid ribs and no side ribs. Some are very finely and some broadly divided; some look more like sea weed than ferns; some have fronds not over one inch long while others grow over one foot; some *todeas* have fronds over two feet long. Most of the filmy ferns are of very dark green color while some are very light green and some are covered with hair; these last ones cannot stand overhead sprinkling. They are all very showy when well-cultivated. These are a few of them which we have in cultivation:

Hymenophyllum: *Asplenoides* from Central America is a small species; *caudiculatum* from Chili or Brazil, a strong growing species with a tail-like appendage at the end of the frond; *crispatum* from New Zealand, crispy frond, dense in habit; *demissum*, South Sea Islands, fine divided, free growing; *flexuosum*, New Zealand, large growing and finely divided; *Forsterianum* from Brazil, large growing fronds, light green and undulated; *tunbridgensis* from Europe, a small growing species making big turfs mixed with moss.

Trichomanes: *Alabamensis*, from the United States, has narrow crowded egg-shaped fronds; *angustatum*, Japan and Java, light green in color, very delicate; *auriculatum*, Japan, a wide-creeping species, frond stalkless, narrow and long, broadly divided; *Luschnatianum*, from Brazil, a very nice species; *maximum*, Java, a strong growing species; *radicans* (Killarney fern), from Europe, are all over the world, one of the nicest of which there are a few varying forms; *reniforme*, New Zealand, has the fronds entire and kidney-shaped; *trichodeum*, West Indies, very delicate species, fronds divided in hair-like divisions.

Todea: *Pellucida* (*hymenophylloides*), New Zealand, has a thick fibrous trunk and long-stalked, large, very delicate fronds; *superba*, New Zealand, the nicest of all the *todeas*, frond long and very finely divided; *Fraserii*, from New Caledonia and Australia, has a fibrous trunk like *osmunda*, big broad fronds, very delicate in texture; *Wilkesiana*, New Hebrides, a little filmy tree-fern, fronds nearly like *pellucida*.

Am. ed. Ham

Cattleya citrina

Cattleya citrina is one of the most fascinating of orchids. Its peculiar habit of growth with its leaves hanging downwards, looking exactly like a plant upside down, attracts the attention of almost everyone.

It is a native of Mexico and grows at a considerable elevation and is a true epiphyte. We sometimes see it grown on blocks, but do not consider this very kind treatment, as it is a plant which loves air and it is almost impossible to keep the roots moist enough on a block, and at the same time have the cool, airy conditions necessary to the welfare of the plant. A raft with about an inch of fern root and good sized pieces of charcoal at intervals will keep the roots moist without continual watering. Nothing sour should be allowed near the roots.

The best plants the writer has seen were at the Royal

Botanic Garden, Edinburgh. These were grown in ordinary teak baskets hung vertically, not against a wall or glass partition, but near the centre of the cattleya house where the air could circulate around them. The plants were dipped and allowed to drip in such a way that the foliage never got wet which was perhaps partly the reason why the plants were in such fine condition. The leaves are glaucous and are covered with a waxy bloom which, with the pendant habit of the plant, may be taken as an indication that nature did not intend that the foliage should remain wet.

The flowers are very attractive and appear in May and June and are also pendulous, yellow, and very fragrant.

James Hutchinson

Pittsburg, Pa.

Lilium Brownii

The typical *Lilium Brownii* is said to have been cultivated in Europe since 1838. *Lilium Brownii* has on many occasions been referred to as a native of China, yet there is no record of its ever having been found there.

The origin of *Lilium Brownii* seems to be obscure. It appears that its name first occurred in the catalogue of F. E. Brown, a nurseryman of Windsor, England, about 1838 or 1839. Whatever be its origin, *Brownii* is a magnificent lily which has often been considered to be the problematical *Lilium japonicum*. Its large trumpet-shaped flowers are of a thick and wax-like texture; inside they are white and on the outside heavily suffused with chocolate coloring. In the bud state this chocolate coloring is most marked. Among importations of lilies from China there have been some forms of this, the principal one being that represented in the accompanying colored supplement, namely, *Lilium Brownii leucanthum*, which was awarded a first-class certificate by the Royal Horticultural Society last year. This lily was first sent to Kew by Dr. Henry in 1889, and during recent years it has been imported in considerable quantities. It is a vigorous grower, the stems reaching a height of 4 to 5 feet. The long-tubed flowers are creamy white with a ruddy tinge outside and having a yellow throat.

Lilium Brownii Chloraster is also a beautiful form of *Brownii* received in importations from China. It differs from the variety illustrated by its brownish stem, narrower leaves, and less drooping flowers. It is also noteworthy on account of its having been used as one of the parents of the beautiful hybrid *Lilium Kewense*. The other parent of the latter was *Lilium Henryi*.

Writing about *Lilium Brownii* a well-known grower says: "No mention of *L. Brownii* and its varieties would be complete without directing attention to a lily which botanists persist in calling a variety of *L. japonicum* (Krameri of gardens). The lily in question is that which used to be called *Lilium odorum*, now called *L. japonicum Colchesteri*. It has nothing to do with *L. japonicum*. It is undoubtedly a form of *Lilium Brownii*."

Harry H. Thomas

Magnolia Watsoni

In the Garden Magazine for this month its editor, Mr. Wilhelm Miller, has an excellent monograph on magnolias. His meagre account of *Magnolia Watsoni* can easily be excused, because very likely he never saw the plant in bloom. Any person who ever saw this plant in bloom could never forget it this side the grave; that is, if he has the sense of smell.

Mr. Miller says this plant has failed in England and hopes that it may prove hardy here. I cannot see why it should be a failure in England, if they are not coddling it too much or giving it the same treatment they give to *Hydrangea paniculata*; that is, growing it in pots and giving it the protection of a cool greenhouse.

I am glad to be able to let Mr. Miller know through the pages of HORTICULTURE that *Magnolia Watsoni* is perfectly hardy in Massachusetts. About two weeks ago I discovered a plant in Mr. Harry Rand's garden, North Cambridge, Mass. When the plant blossomed about a week ago Mr. Rand sent me some material to have it identified at the Gray Herbarium. To my great delight it turned out to be nothing less than *Magnolia Watsoni*.

This is a remarkable plant! It is not as showy as some of the other Japanese species of magnolias but its great charm lies in its delightful fragrance and the length of time it produces its blossoms. It is very strange that we did not hear about this plant before as it has been grown in the above garden for twelve or fourteen years, and has blossomed many times before this year. It was obtained from the Shady Hill Nursery when the nursery was located at the corner of Beacon and Kirkland streets, Cambridge. The shrub is of large dimensions now, and has stood many severe winters. It is fifteen feet high and about eighteen in breadth. Even when it is not in blossom it makes a pleasing plant. Its foliage is bright and clean and is not often molested by insect pests.

Its flowers do not open all at the same time, therefore it is not as showy as one might expect it to be. However, this is not a misfortune as it produces flowers for five or six weeks consecutively and their delightful fragrance is enjoyed in the garden for that length of time. The flowers are from four to six inches across when they are open. When open they are more showy on account of their bright-colored filaments but to one they are more pleasing when they are in the bud state, just about ready to expand. They are pure white then and much more fragrant. The fragrance is much like pineapple but, if anything, more pleasing.

The plants of *Magnolia fuscata* (*Michelia fuscata*) which were exhibited by Mrs. John L. Gardner at Massachusetts Horticultural Hall last Saturday, June 2nd, were admired by every one, not for their blossoms but for their fragrant flowers. The fragrance of *Magnolia Watsoni*, I would be willing to say, is one hundred per cent. stronger and one blossom will fill the largest room with fragrance.

Like all other Japanese magnolias it prefers a sheltered position and a rich and well-drained soil. Nurserymen should make a note of this plant. When it is once known there will be a big demand for it.

There is an excellent plate of this plant in the Botanical Magazine table 7157.

Nephrolepis Piersoni

This picture shows what can be done with the original Pierson fern. It represents a plant at the Hunnewell conservatories, Wellesley, Mass. The plant is in a 12-inch pan, is five feet across and seven feet deep. It has not had any special culture other than to see that it got plenty of water.

Rhododendron fragrantissima

SEE FRONTISPIECE

The accompanying photograph is of a Himalayan rhododendron, *R. fragrantissima*. The specimen is nine feet high and seven through. Of a number of species and varieties this is the easiest to grow, and one of the best white-flowered ones. Mr. Harris, my predecessor, did not succeed in blooming it. It always set buds well, and it was only by accident that we got it to flower. We did as he had done—stored it with other tender rhododendrons, which sometimes were subjected to a few degrees of frost. One autumn it was put in early—with the Indian azaleas. It held its buds and bloomed magnificently the following spring. Then it missed a season, and just because it got a slight autumn frost, which did not even injure the Indian azaleas. Then we knew the reason why it had not bloomed before.

It will thrive in good loam with a little peat and sand, and will take liquid manure occasionally when making its growth. The flowers are pure white, widely campanulate, 4 to 5 inches in diameter, and powerfully fragrant.

The United States Express trouble

The refusal of the United States Express Company to give any explanation of their peremptory raising of the rates on cut flower shipments from New Jersey points, places them in a very unfavorable light, and, in a measure, gives justification for the charge that the move is simply vindictive and tyrannical. The rival "wagon express," which has been running successfully ever since the trouble a few years back, and which perhaps is the irritant back of this rough-shod action of the big company, affords an easy relief for shippers within a restricted area but, to those outside of those limits, is worse than useless. In the absence of evidence to the contrary it is reasonable to assume that the rates formerly charged by the U. S. Express Company and still in force with every other company are sufficiently remunerative. It is recorded that one of the express companies—the Wells-Fargo—has earned 40 per cent. annually for the past four years. These companies oppose all parcels post legislation. Mr. Grower, where do you stand on this question? On several occasions the request has been made through the columns of this and other journals that readers urge their respective congressmen to take favorable action on the bill establishing a parcels post service. How many have done so?

Where the Society of American Florists and Ornamental Horticulturists leads

Society meetings and conventions are crowding closely one on the other and the greatest convention of the year so far as attendance, enthusiasm, and recreation count—that of the S. A. F. at Dayton—is now but two months away. This organization, with its sweeping charter and comprehensive scope, belongs to no special interest or division of horticulture but is equally concerned with the welfare of every department—florist, plantsman, seedsman and nurseryman. That the influence of the Society of American Florists and Ornamental Horticulturists is

not felt in some directions as effectively as in others is due, in part, to the activity and direct usefulness of some of the special organizations, and, in part, to a more or less general misapprehension as to the legitimate sphere of this society. A closer affiliation between the growers of outdoor ornamental material and the producers of indoor decorative stock is much to be desired. These interests are both growing, have much in common, they cater to the same sentiment and serve the same people; many concerns embrace both departments and many more will do likewise in the near future. That the Society is fully alive to the situation and its duty in the premises, is well evidenced by its generous provision for an outdoor exhibition at Dayton this season. Whether the trade for whose benefit this step was taken is far-seeing and discerning enough to take advantage of the opportunity thus provided, time will disclose. But it is the Society's province to lead and there is always room in the front rank for the man of progress. Keep your eye on Dayton.

The high art of arrangement

The art of arrangement and grouping, whether applied to the disposition of material in cut flower work, the arraying of plants in the exhibition hall, the planting of garden beds, or the massing of trees, shrubs and flowers for landscape effect, calls for qualities which comparatively few possess, judging from much of the work we see from day to day and for which either the artist or his employe must be held responsible. In nature there is a proper place for everything and the workman who is able to rightly interpret nature's purposes and methods will not go far wrong if he proceeds accordingly and does not permit his judgment to swerve under the dictates of fad, expediency, sensationalism or the mandates of an imperious patron, as in the case of a certain wedding where the mother of the bride insisted on the decoration of the mansion with the brightest red flowers obtainable, in defiance of all accepted sentiment and fitness, with the object of intensifying by contrast her daughter's white apparel and making all else subjective to the central figure in the performance. In the outdoor planting of ornamental material we often find, on the one hand the made-to-order landscape architect with his stereotyped treatment, on the other the enthusiastic plant lover who insists on filling his garden with a jumble of everything that looks pretty in itself, without regard to its relation to its surroundings. To such a one it is next to useless to expound the merits of "mass" grouping or to try to convince him that he should cast out four-fifths of his treasures for the sake of breadth and bold effect. Going back to the other extreme—we have in mind a half acre suburban lot which the owner turned over to a professional landscape architect who proceeded to lay it out with the regulation blocks of cornuses, kerrias, peonies, yuccas, retinospores, etc.; the owner wanted to be in the fashion and he got there. The adornments of a certain public ground at present include a number of beds of azalea mollis with the tall spires of foxgloves intermingled. A discordant and unnatural mixture surely; how superbly effective those foxgloves would be if placed in an unstudied "colony" against a tall dark background of foliage. Instances innumerable might be cited to show that we all gardeners, landscape architects, florists and amateurs have yet much to learn of the rudiments of our "high art."

NEW WICHURIANA HYBRIDS.

Some five years ago Hoopes, Bro., and Thomas introduced a set of six new hybrid Wichurianas that were meritorious. The varieties named Wm. F. Dreer, Robert Craig and Edwin Lonsdale were the best of the six. This firm has been working along the same lines since and their recent exhibition of other new varieties at Horticultural Hall, Philadelphia, shows a distinct advance. Only two of the new ones, Christine Wright and Columbia, are named as yet, the balance being shown under number. Christine Wright is a lovely pure silvery rose, fine both in bud and when full blown. It has large petals, and is quite full to the centre. Columbia is a clear daybreak pink shading to blush, lovely in the bud and also when open. It is semi-double but, charming even when full blown. Both this and Caroline Wright are of fine substance. No. 32 is a dark rose, a cross between Wichuriana and American Beauty, the fragrance of the latter being very apparent. A fine thing. No. 33, crimson, a cross with Gruss an Teplitz, lacks form and substance but good color. No. 41, lighter in color than 33, and like that variety lacks form and substance. No. 42, pure white, small but fine form and substance, similar in character of bud to Robert Craig but smaller and pure white. No. 45, deep crimson, better substance and form than 33. No. 56 is similar to Christine Wright but a lighter shade. No. 58, rose, very double and good form, lacks substance, small petals. No. 43, blush passing to white; large; fine form in the bud but not quite so good as Columbia when open, being a little lacking in substance.

Altogether these new varieties are far in advance of the original six and are well worth the attention of rose lovers.

G. C. W.

PERSONAL.

Mrs. M. B. Faxon, the seedsman's wife, is in Boston on a visit to her mother and sisters. Mr. Faxon is with the Livingston Seed Company, at Columbus, Ohio.

Among the visitors to HORTICULTURE'S office this week were Samuel Murray, Arthur Newell and wife of Kansas City; W. C. Langbridge of the Jerome B. Rice Co., Cambridge, N. Y.

Mrs. Cameron, wife of H. L. Cameron, of North Cambridge, sailed on the steamer Ivernia, June 12, to visit London. Mr. Cameron will join his wife in Scotland a month later. They intend touring Europe for two months, returning in September.

Miss Clara Hayden, daughter of C. H. Hayden, the well-known florist of Dexter, Me., was married on June 6th at the residence of her parents to Dr. H. M. Crassland of Dexter. After the ceremony the happy couple started for Boston and the Berkshire Hills on their wedding tour. On their return they will spend the summer at their cottage at Ocean Park, Me.

WHOLESOME CHESTNUTS.

Stop syringing grapes when they begin to color.

One good large peach or nectarine is worth a dozen poor, small ones. Don't be afraid to thin the fruit; they cannot possibly do any harm after they are severed from the branch but on they might.

Keep on watering out-door roses if the ground is at all dry.

Get to thinking about sowing seed of herbaceous plants for next season's flowering.

Find out all you can about peonies; it will be worth something by and by.

Have you seen *Nephrolepis Whitmanii*? It is certainly a beauty and the best of it is that it is a shapely specimen in all its stages of growth. Get one and multiply.

If you have anything good out of the ordinary, send it to the exhibition and let the other fellows see it. Don't expect a gold medal for it.

If you have no herbaceous plants you should get to see someone who has. There are some beautiful things coming into bloom now; if you only could see them many of them or their kind would this fall or next spring find a home on your place.

ALL RECEIVED IN ONE DAY'S MAIL.

"Plants All Gone."

Dear Sir:

Inclosed find \$1 to place my ad. in paper one more week. Have sold \$15 worth already from my \$1 ad. of last week.

Yours truly,
G. H. W.
Massachusetts.

"One of the Two."

Gentlemen:—From our recent gladiolus advertisement, inserted in three trade papers, but two of the three so far as we know brought us any orders. One of the two was HORTICULTURE.

Yours truly,
WM. ELLIOTT & SONS.
New York.

SOME GOOD PEONIES.

We are indebted to Mr. C. W. Ward of Cottage Gardens, for the photographs from which were made the series of handsome peony illustrations published in successive issues of this paper.

NEWS NOTES.

Robert M. Leavitt of Elmira, N. Y., sustained a loss of about \$500 through a fire in the building which he occupies. Insurance covers it.

Alex. McConnell has moved his floral establishment to the Windsor Arcade, 571 Fifth avenue, New York, a larger and more commodious building.

M. Alexis Callier has been appointed president of the Societe Royale d'Agriculture et de Botanique de Gand to succeed the late Count Kerchove de Denterghem.

The entire establishment of George Lorenz of Astoria, L. I., N. Y., together with all the plants in greenhouses and the outdoor stock will be sold at auction on June 20.

A terrific hail storm swept through Ontario County, New York, on the morning of June 10, doing serious damage to greenhouses and nursery stock in Canandaigua and vicinity.

The boiler house and ends of four greenhouses at W. & K. Pedersen's establishment, St. John, N. B., were destroyed by fire on June 9. The loss, which is estimated at \$1,000, is covered by insurance.

The publication of the *Revue de l'Horticulture Belge*, edited by the late Count Kerchove de Denterghem, is to be continued under the direction of M. Charles Pynaert, assisted by Messrs. DeNobele, A. Van den Heede and Verdonck.

It is estimated that the W. & T. Smith Co. of Geneva, N. Y., lost \$100,000 by the storm of wind and hail that swept over that section last Sunday. Growing nursery stock was fairly battered into the ground. Fruit growers in that locality are all heavy losers.

In the *Queensland Agricultural Journal* for March, 1906, F. Manson Bailey describes a new white-flowered dendrobium, of the *Aporum* section. It is a native of British New Guinea, and is said to be well worthy of cultivation. The name given to it by Mr. Bailey is *D. litoreum*.

SAN JOSE SCALE.

Department of Agriculture,—Division of Zoology, Harrisburg, Pa.
Editor HORTICULTURE.

Dear Sir:—Noting that on page 385 of HORTICULTURE you have referred to my statement as to the use of the Lime-sulphur Wash for the San Jose Scale, I beg to say that I am correctly quoted therein, and I can assure you that we have had excellent results in spraying with the Lime-sulphur Wash, without the Salt, applied when the trees were dormant. Nothing has proven as cheap, nor as beneficial to the trees, nor as sure in killing the San Jose Scale. It will not, however, act as a certain remedy for the Oyster-shell Scale, although we have had good results in using it for the Scurfy Scale.

Very truly yours,

H. A. SURFACE,
Economic Zoologist.

NEWS OF THE CLUBS AND SOCIETIES.

PITTSBURG AND ALLEGHENY FLORISTS' AND GARDENERS' CLUB.

The subject for the meeting June 5th, was "Peonies and Other Out-Door Blooms," but on entering the hall it was apparent that the peony was queen of the evening and the "other out-door blooms" but humble attendants on her Majesty.

The principal out-of-town exhibitors were Messrs. T. Meehan & Sons and H. A. Dreer of Philadelphia, and C. Betscher of Canal Dover, Ohio. The season was nearly over with Eastern exhibitors, and with one of them the plants had been divided and set last fall, so that their flowers were at something of a disadvantage, but they were in large variety, carefully labeled and pleasing colors.

Among the Meehan peonies *Delicatissima* was noted for its pleasing color, and *Couronne d'Or*, *Charlemagne* and *Marie Lemoine* were notable among the Dreer peonies.

It was evidently the height of the season with the Ohio peonies for almost without exception they were magnificent hemispheres of loveliness. The light and rosy pink section seemed the best and particularly noticeable were, *Lady Bramwell*, *Duchess d'Orleans*, *Floral Treasure*, *Jenny Lind*, *Edules Superba*.

In whites there seemed nothing better than *Festiva Maxima*, and it was something of a surprise that this variety introduced to the trade in the 50's, should still stand at the head of the list. The *Edules Superba* also shows up well with only a few pink superiors. The size and fragrance of the peonies shown was a revelation to many of us, and it certainly looks as though the present peony enthusiasm was founded upon a substantial basis. Schenley Park Conservatories showed very fine white peonies, *gaillardia*, *pyrethrums*, *columbines*, *oriental poppies*, and a general collection of seasonable flowers. S. J. Wolfe of Emsworth showed *clerodendron*, *poppies*, *dahlias*, *peonies* and *pyrethrums*. F. Burki, Gibsonia, Pa., a good collection of peonies.

The July meeting of the club will be a business one to arrange details for the annual picnic.

H. P. JOSLIN, Secretary.

NEWPORT HORTICULTURAL SOCIETY.

The Autumn exhibition of the Newport Horticultural Society will be held August 13, 14 and 15 in the Casino on Bellevue avenue. The Casino is the best place wherein to hold such an exhibition as the one in prospect promises to be; not only is the main hall large and well lighted but the piazzas, which are also placed at the society's disposal, are exceedingly well adapted for the gateway and other out-door decorations which will be a feature of the exhibition this year. The schedules were somewhat delayed on account of uncertainty of the dates, but they will be ready for mailing Saturday of this week, and can be had on application to D. McIntosh, Ledge Road, Newport.

NEW YORK FLORISTS' CLUB.

There was a fair attendance on Ladies' Night and a very pleasant sociable evening was spent by the members and their ladies. The routine business was put through with commendable expedition. Mr. Pepper reported for the outing committee that the indications are favorable for a large party on the excursion, July 2. Tickets are ready and the program will be completed in a few days. Mr. O'Mara on behalf of the special committee appointed to interview the U. S. Express Company, reported that the officials of that company had declined to comply with the request for a consultation and had taken the ground that the matter of express rates was something that concerned only the company and the individual shippers. The committee would still keep working on the matter and would thank shippers for any further information they could supply. On the matter of a club contribution for San Francisco the secretary was authorized to communicate with the secretary of the California Horticultural Society and report later. Resolutions were adopted extending sympathy to Messrs J. B. and W. F. Nugent and Peter T. DeVoy on the recent bereavements in their families.

On the exhibition table were some fine peonies from C. W. Ward and Charles Lenker, the latter including some superb Japanese varieties. Also a collection of *Cattleyas gigas*, *Mendelli*, etc., from Lager & Hurrell which was awarded a cultural certificate. Among the finest varieties were *Mossiae Summitense*, *M. virginalis* and *M. Reineckiana*. H. Beaulieu showed peonies and pansies, P. Neihoff his rose-named *Columbia* and H. H. Barrows six plants of *Nephrolepis Whitmani*.

Business being closed the rest of the evening was given up to entertainment, singing, etc. An excellent collation was served and each lady received a bunch of roses.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The club will hold its next field day on Tuesday afternoon, June 19, at the estates of Mr. Larz Anderson and Mrs. W. C. Brandegee in Brookline. Members and friends are asked to meet at the Soldiers' Monument, Centre Street, Jamaica Plain, at 3 o'clock.

Electric cars will leave for Horticultural Hall at 6 o'clock, where refreshments will be served at 7.30 sharp. Any members who are, from any cause, unable to attend the field day, are invited to be present at the hall in time for the refreshments, which will be specially seasonable.

In lieu of a regular lecture at the club meeting there will be a general discussion of seasonable topics, answers to queries from the question box, and making arrangements for the club's coming picnic.

Contributions of peonies and hardy roses, or any other flowers, are invited for our exhibition table.

No meetings will be held during July and August.

W. N. CRAIG, Secretary.

AMERICAN ASSOCIATION OF PARK SUPERINTENDENTS.

The ninth annual meeting of this association convened at the St. James Hotel, Washington, D. C., at 10 A. M., on Tuesday, June 12, President Theodore Wirth in the chair and about twenty members in attendance. The president read his address which was a well-considered and practical document and was followed by the secretary-treasurer J. W. Duncan, who presented his annual report showing a small balance to the good and a membership of seventy-five. After sundry committee reports resolutions on the death of O. F. Dubois of Peoria, Ill., were adopted. W. R. Smith of Washington was elected an honorary member and six new annual members were elected. The afternoon was devoted to an automobile ride about the city and through Rock Creek Park. At the evening session, J. A. Pettigrew read a paper on the treatment of park woodlands which proved exceedingly interesting and instructive and was discussed at length.

Officers were elected as follows: President, Byron D. Worthen, Manchester, N. H.; vice-presidents, John Chambers, Toronto, Ont., J. W. Duncan, Boston, F. Nussbanner, St. Paul, Minn., J. F. Cowell, Buffalo, N. Y., Chas. E. Keith, Bridgeport, Conn.; secretary-treasurer, F. L. Mulford, Harrisburg, Pa.

Toronto was selected as the place for the next meeting.

Wednesday was devoted to a trip to Mt. Vernon and Arlington. Wednesday evening was enjoyed as a guest of a number of the Washington fraternity.

COLUMBUS FLORISTS' CLUB.

The regular June meeting of the club took place last Tuesday evening at the headquarters in Iroquois Hall. The night, although very warm, brought out a goodly number of members. President Stevens was in the chair, and Secretary McKellar was, as always, promptly on hand. After much routine business had been gone through with, and the treasurer's report submitted, showing the financial end to be in satisfactory condition, the real business of the evening was taken up. The club has two things on its mind—a chrysanthemum show this autumn and a bowling team for Dayton this summer. Time will tell its own story, as regards the latter. The meeting was very enthusiastic, as regards the "Mum" show. Last year was the first one ever held here, and resulted as follows: An admission of 25 cents to adults and 10 cents to children was charged and something like \$325 was realized, with expenses about \$200. Of course lots of hard work was done to accomplish such a good showing. A committee is now canvassing the craft and will report at the next meeting how the trade feels regarding another attempt this fall. The show matter was discussed by Messrs. Bauman, Hill, Faxon, Seibert and Reicher. It looks now as if 35 or 40 of the craft would attend the Dayton convention. The next meeting will be Tuesday evening, June 19.

CINCINNATI FLORISTS' SOCIETY.

At the annual meeting of this society held on Saturday evening, June 9, the following officers were elected to serve for the ensuing year: President, Wm. Murphy; vice-president, T. B. George; secretary, C. J. Ohmer; treasurer, D. Rusconi; trustee, R. Witterstaetter.

An invitation has been extended to all florists, whether members of the society or not, to be present at this meeting. Arrangements are being made for the Dayton meeting of the S. A. F., and it now looks as though Cincinnati would be well represented. If possible those who attend will go by special train. The transportation committee, consisting of Messrs. Ohmer, Witterstaetter, Olinger and Murphy, have the matter in charge.

The picnic question was again brought before the society. Those in favor of continuing the annual outings rallied their forces and carried the day. Messrs. H. Schwarz, Benj. George, George Murphy and Wm. Speck were appointed to make all necessary arrangements, and the third Thursday in July seemed to be the most popular date. C. E. Critchell is getting up a bowling team for Dayton. If you can bowl see him and go along.

OUT-DOOR ROSE SHOW AT PHILADELPHIA.

A small but meritorious exhibit of out-door roses was held in Horticultural Hall under the auspices of the Pennsylvania Horticultural Society on the 7th and 8th insts. William Robertson carried off four firsts, his flowers being extra fine in all entries. His first prize six consisted of white Baroness, Baroness, Margaret Dickson, Paul Heyron, Magna Charta and Ulrich Brunner. Other prize winners were James W. Paul, J. Walter Lippincott, C. A. Griscom, H. B. Rosengarten, H. W. Biddle.

NEW BEDFORD HORTICULTURAL SOCIETY.

At the monthly meeting of this society held in the rooms of the Y. M. C. A. building on June 11 it was decided to hold a spring show in 1907. The matter was placed in the hands of the executive committee for action. A very interesting discussion took place confined chiefly to herbaceous plants. A date for the annual rose show will be announced later.

SEED TRADE TOPICS.

Much needed rains have gladdened the hearts of farmers and seed growers throughout the east, and in Michigan and Wisconsin. The pea crop, which was very near the point where deterioration commenced, has been especially benefitted. As temperatures have been moderately high beans and corn have been greatly helped. The crop of peas for canning will be light. Delaware and Maryland have been estimated at 25 to 40 per cent., and Indiana not above 50 per cent. New York, Michigan and Wisconsin cannot be accurately estimated, but it is confidently predicted that they will not meet early expectations.

Retail seedsmen generally agree that business was unusually good during May.

Bloodsdales spinach is in very short supply this season, and as the crop of 1906 will hardly be available for this year's requirements prices are likely to soar. Dealers should beware of Bloodsdales spinach at low prices. It is said that some very reputable firms have already been victimized.

That justly popular seedsman, Jerome B. Rice, has recently purchased a large and powerful Pope-Toledo car. Mr. Rice is said to be opposed to scorching, and maintains that a speed of 25 to 30 miles an hour ought to satisfy any person of modest ambitions.

A Santa Clara county grower sent this week to HORTICULTURE'S San Francisco correspondent the following clipping from a San Jose newspaper: "More than three-fifths of all the vegetable and flower seeds grown in the world are produced in Santa Clara valley, California. The average annual crop of onion seed is 400 tons, or 800,000 pounds. Nearly 10,000 acres of land are under cultivation in that county for the growing of flower and garden seeds. The total crop amounts to something like 3,000,000 pounds annually. There are grown regularly for commercial trade in California 411 varieties of sweet peas, 72 of lettuce, 33 of onion, 32 of radish, 25 of beans, 30 of asters and 53 of nasturtiums, not to mention hundreds of other seeds less widely known. Of the many hundred varieties of flower seeds, asters pay the best. Next to sweet peas, they are the most extensively grown in Santa Clara valley, the average annual crop being about 50,000 pounds. The California climate is not unlike that of southern France and Germany, where the old world seed-growers have their grounds. In spite of the similarity, however, California seed growers succeed in harvesting their crops from four to five months earlier than do their foreign competitors."

PHILADELPHIA NOTES.

Samuel J. Irvine has accepted a position as gardener to Philip J. Smith, Mt. Airy. Mr. Smith has recently added to his estate and will make some improvements on the grounds during the summer. There is some glass on the place already and four new houses will be built, besides a new dwelling house for the gardener. Mr. Irvine was seven years with Jno. Westcott and five years with Louis Burk.

William Rothe, late with Paul Huebner and Fred Hahman, succeeds S. J. Irvine as superintendent of the Grovedale Nurseries of Louis Burk.

Fred Ehret has moved into his new quarters, 1407-1409 Fairmount Ave., next door to his old place. The new establishment is nicely fitted up and will have a conservatory in the rear for exhibition and storage of plants.

L. H. Jones, a Chester florist, died in the hospital here on Sunday last after an operation and was buried on Wednesday. Many floral offerings were sent by the local trade and a number of the members of same attended the funeral.

D. T. Connor has improved his office quarters at the Philadelphia Flower market where he represents the Lord & Burnham Co. He has also recently moved his residence from 2033 N. 20th street to 5024 Pine street.

INCORPORATED.

The Terre Haute Rose and Carnation Company, Terre Haute, Ind. Capital, \$20,000. Directors, Edward Reiss, Charles M. Fortune and Henry Kranzke.

A charter has been granted to the McRae-Jenkinson Co., Cheswick, Pa., to do a general florist business. A list of the officers of the company was given in a previous issue of HORTICULTURE.

PUBLICATIONS RECEIVED.

"The Culture of Water Lilies and Aquatic Plants" is a beautifully illustrated pamphlet of 48 pages issued by Peter Henderson & Co., New York. It is a thoroughly practical and comprehensive treatise on the interesting topic of water gardening, yet is much more than an ordinary catalogue. The various topics of situation, pond construction, gardening in tanks, soil, planting, raising from seed, hardy and tender, day and night bloomers, bog and marsh treatment, fish, insects, etc., are all well covered, and no lover of aquatic plants should fail to send for a copy.

CUT FLOWER MARKET REPORTS

BOSTON The market the last few days has been dull with only here and there a bright spot to give it a little activity. Flowers are in abundance with but a light demand. American Beauties with the exception of Golden Gate have the best demand in roses while carnations have little if any, the stock being poor. Lily of the valley are in fine condition and a good demand is soon expected while sweet peas are a glut in the market.

Severe hot weather the **BUFFALO** past week found the market in a bad condition. Roses, carnations, peonies and other stock was over-flowing. Carnations came in asleep, peonies overheated and roses in about the same condition. Very little business was done up to Friday and Saturday, when it seemed to liven up. The cemetery florists were on hand but cloudy weather and rain stopped the demand 50 per cent. and consequently much was either carried over or lost. Weddings and commencements are on but with the abundance of stock they are hardly noticeable in the wholesale market. Beauties were in better demand owing to a few large funeral orders. Select Bridesmaids are small but Kaiserins, Carnots and Richmonds are in fine quality. Same may be said of lily of the valley, sweet peas, Swansonias, lilies and orchids. The only thing that was really scarce was smilax, which was in good demand and prices held steady. Other green goods in good supply, demand fair.

The numerous June **CINCINNATI** weddings coupled with the usual number of school commencement exercises, have caused an unprecedented demand for flowers for this season of the year. Roses, with possibly the exception of Beauties, are hardly fit to use. Carnations are quite small and many of them are sunburned and attacked with thrip. Longiflorums, lilies of the valley and sweet peas are still in good shape and sell well.

There was quite a lull in the market last Saturday when the traction cars were obliged to stop running on account of the bursting of the water pipes. The growers within the city limits are in bad straits for water and with the thermometer above 90 degrees the situation looks serious.

COLUMBUS Good business continues; there has been brisk trade in all lines. The usual number of June weddings have taken place, with more to follow, counter sales have kept up remarkably considering the intense heat of the past ten days, funeral work has also been active, and to all this has been added the bouquets for the various school graduations. The sales of bedding plants keep right along with the seedsmen and growers; this business will of course end pretty soon; it will have to end, as everybody is about sold out. It has been an especially good season for the plant growers. It will not be very long now before the bulbs begin to come in. It certainly bids fair to be a most excellent bulb season, if we are to judge from the inquiries and advance orders. Weather very hot for June, and also very dry.

LOUISVILLE Business conditions were very satisfactory the previous week owing largely to commencement work. Carnations came in in good quantities, quality fair, and the demand was excellent. There were great quantities of good roses and they disappeared rapidly. The supply of peonies was greatly decreased but there were enough to meet requirements. Sweet peas were in abundance and were popular. Other stock continued normal.

NEW YORK The market is in a condition of complete collapse and has been so for the past week. Wholesale establishments are loaded up with everything imaginable in cut flowers, from forget-me-nots to tulip trees and there is no fixed price on anything. Roses are generally mildewed and poor. Peonies are still very plentiful but run rather small on the average. Carnations show signs of hard wear. There is no stable value on any flower in the entire list.

PHILA-DELPHIA The market was badly congested last week especially in carnations. These were a drag on the market and could hardly be sold at any price, even the fakirs would not touch them, they went to sleep so quickly on account of the hot weather. Business all along the line was in

decreased volume. Roses of all kinds are getting poorer as to quality and do not give satisfaction. Lily of the valley is in very good shape and a satisfactory item every way with the demand excellent. Cattleyas are in fair supply and have the call for choice work. A moderate supply of Easter lilies is coming in and the demand for them is excellent. Sweet peas are of fair quality, but they are not selling extra well. Plenty of gardenias around; demand weak. Peonies are still in fair volume although the flush of the crop is marketed. The late varieties will keep the market supplied for some time yet. Prices continue satisfactory.

BUSINESS CHANGES.

The Morrill greenhouses in Brewer, Maine, have been leased by F. P. Lane.

The firm of Powers & Gibbs, Ft. Wayne, Ind., has been dissolved by the withdrawal of Mr. Gibbs.

Messrs. Bryant and Arp have leased the Nichols & Lorton nursery atavenport, Ia., for a term of years.

Geo. Cotsonas & Co. have secured a lease for a term of years of the building at 50 West Twenty-eighth street, New York.

Karl Rosien of New Haven, Conn., has disposed of his business to Sokol Bros., who will grow for both wholesale and retail trade.

The Brant & Noe Floral Co. will again be a familiar name among the trade in the vicinity of Chicago, and the change will be marked by new houses with the latest improvements at Forest Glen.

The business heretofore conducted by Johnson & Carlson, at 3319 Northwestern avenue, Chicago, has been taken over by F. E. Carlson. Mr. Johnson has associated himself with J. J. Krutchen and they will carry on a commission business in the Atlas Building in the quarters recently vacated by George Reinberg.

The United States is Germany's best customer for potassium salts (kainit, etc.). In 1903, out of the 501,385 tons exported, 275,302 tons were sold to America, while in 1905 the sales to America were 440,892 tons out of 852,454 tons exported.

Facts YOU Should Know

I make a specialty of installing your heating apparatus, and installing it right. It is only fair to yourself that I should have an opportunity to estimate on your heating work.

Read the following letter from Mr. Jacob Hauck, Bloomfield, N. J., whose range of glass comprising eighteen thousand sq. ft. (18,000) I heated last season, and who is erecting at present another range of ten thousand sq. ft. (10,000) for which I have received the heating contract.

MR. WM. H. LUTTON:

Dear Sir:—I am well pleased with the heating system that you installed in my new greenhouses last summer, and I shall take great pleasure in recommending you to anyone who should care to inspect the work that you erected. Yours truly,

JACOB HAUCK.

The above letter should interest you if you are anxious to receive the best results.

OBITUARY.

James Daly, one of the oldest florists in Brooklyn, N. Y., died on Sunday, June 3, at his home, 312 Prospect Park West, in his seventy-sixth year. He leaves a widow, four sons and three daughters.

Consul V. L. Duhaime, of Saltillo, reports that there is not a fruit-tree nursery in all Mexico, and suggests to American nurserymen of push and energy that they could succeed in that Republic. The consul says that fruit of the highest grade can be raised, all altitudes being available from the sea level to 5,337 feet. Apples and pears thrive in the elevated regions, while there are excellent opportunities for raising peaches, grapes, and plums. The consumption of fruit in the Mexican cities is large, much of it coming from the United States.

Look through the Buyers' Directory and Ready Reference Guide. You will find some good offers there also.

Here Is Something That Concerns Your Pocket Book.

Dorchester, Mass., May 17, 1906.
Messrs. Holly-Castle Co.

Dear Sirs:—In reply to your inquiry regarding the amount of coal consumed by my heating system I would say that I have used 56 tons costing \$337.50 during the past winter.

I used 1 ton of Furnace	@	\$5.75
6 " " " " " " " " " "	@	4.00
7 " " " " " " " " " "	@	4.75
41 " " " " " " " " " "	@	6.50
1 " " " " " " " " " "	@	8.00

Mr. Dickerman puts the consumption last year at 75 tons of egg size. I haven't been able to get the exact figures as yet, but will endeavor to do so if possible.

It would seem conclusive from the above figures that there has been a saving over last winter of 19 tons of coal, which, at \$6.50 per ton, makes \$123.50 saved. It has cost me \$26.00 for power to run circulator, which, deducted from \$123.50, leaves \$97.50 as the total

saving on coal. Add to this the wages of a night fireman (necessary on previous winters but dispensed with during last winter) for four months at \$40 per month and you have a total saving of \$257.50.

You are at liberty to use this letter in any manner you desire as I have the bills and statements to back it up.

Very truly yours,
THOMAS R. MATTHEWS.

If you find anything in the above letter that interests you, write to us.

GREENHOUSE REASONS.

Reasons are plentiful why **Premiers** are the best built. They are portable as well as durable—artistic as well as modern. You can see its superior outside points by its appearance;—the inside points of supremacy are proved by long wear—honest wear. They're all the same, from smallest to largest;—none of them ashamed to show their ins as well as their outs. We have had experience in greenhouse construction—that's the reason. Send for illustrated booklet No. 45.

"Good Enough"

is one kind of argument, but "better still" is a still better one. There are a lot of florists hanging on to old forms and ways of greenhouse construction because they are good enough. We are looking after the florist who wants the top notch of efficiency in greenhouse construction at a right price for the right thing.

QUARTERS FOR

PRINCESS VIOLET STOCK

The **Princess of Wales** is still the leader of all single violets. There is no other variety on the market that can compare with it as a commercial violet because it blooms from Sept. 15th to May 1st; every bloom is marketable. It has size, it has color, it has length of stem. It has fragrance. It sells when any other variety, single or double, can not be given away. The people want it.

So great is my confidence in this violet that the following Autumn I will devote 80,000 feet of glass to the growing of this variety.

I have about 200,000 nice young divisions now ready to ship at the following prices:

\$2.00 per 100 \$15.00 per 1000 500 at 1000 Rates Lots of 5000 at \$14.00 per 1000
Lots of 10,000 \$13.00 per 1000

Some People have taken our advice as published in

these columns recently and are buying **My Maryland** for trial. We reiterate here—if it succeeds with you as it does with us, it will prove the best white carnation you ever grew. Despite the variety's apparent failure in several places, we strongly advise all growers to give it a trial. We have been frank about its faults as developed in other places. We doubt if these will develop in many places.

Jessica we believe, will succeed generally and will prove to be the best red and white variegated ever disseminated. Few varieties show as strong constitution as this one does and it is a wonderful producer. Extra fine stock of both varieties ready now. R. C., \$2.50 per doz.; \$12.00 per 100; \$100.00 per 1000. Pot plants, \$3.00 per 100 extra.

Fine large specimens in 8-in. pans, \$2.00 and \$3.00 each.

This is one of the most salable plants, and stock offered above will please you.

F. R. PIERSON CO., Tarrytown-on-Hudson, New York

The Great Temple Show of the Royal Horticultural Society

One of the most successful of the many Temple shows held by the Royal Horticultural Society was that which took place in London on May 29, 30, 31. Glorious weather favored the occasion and the tents and the lawns were thronged with crowds of enthusiastic visitors. This early summer show, which is held in the gardens of the middle Temple, delightfully situated by the River Thames, is now quite an important function and attracts a large and distinguished assemblage. Three enormous tents are filled with a bewildering variety of exhibits of the very finest plants, flowers, and fruits, while groups of hardy shrubs and other plants are arranged on the lawns outside.

The largest of the three tents, the contents of which form a magnificent flower show in themselves, is given up almost entirely to hardy flowers. The second tent is filled chiefly with greenhouse and hothouse plants, while the third one contains the orchids and roses.

A detailed report would probably have little of interest for your readers, but I will endeavor to draw attention to some of the most remarkable exhibits and the new plants. The most coveted award is the handsome Veitchian Cup, value 50 guineas, presented to the exhibitor of the finest display in the whole show. It is given to no particular class of plants, but simply to that exhibit which in the opinion of the council is the most meritorious. On this occasion the Veitchian Cup was won by Sander & Sons, the famous orchid growers and importers of St. Albans, England, and Ghent, Belgium. Their exhibit was a magnificent exposition of some of the loveliest and rarest orchids of the day and for quality and for elegance of arrangement has perhaps never been excelled. One of the most remarkable plants in the group was a specimen of *Cattleya Skinneri* having 150 blooms. One of the finest new orchids was *Laelio-Cattleya Golden Glory* with canary yellow sepals and petals and pale crimson lip, a strikingly beautiful flower. The finest of the odontoglossums, of which many were to be seen in Sander's group, was crispum variety *Leonard Perfect*, a large flower blotched with light red upon a white ground color. M. Ch. Vuylsteke exhibited a collection of some of his wonderful varieties of spotted *Odontoglossum crispum*. Several of them received the award of merit.

The rare and comparatively new orchid, *Cymbidium rhodochilum*, was shown in the exhibit from William Bull & Sons. This is a handsome flower and peculiarly attractive on account of its unusual coloring. The sepals are green, the petals too are green spotted with black, a color combination that is most pleasing. A fact which still further enhances the beauty of this *cymbidium* is that it has a crimson lip.

The roses were perhaps admired more than any other exhibits. They filled the major portion of one tent and by reason of their grace, variety, and richness of coloring made most beautiful displays. Most of them

were similar in arrangement: they had a groundwork of dwarf bush roses in many varieties of tea, hybrid tea and hybrid perpetual and dwarf polyanthas. Arranged here and there among this groundwork of dwarf plants were standards and pillars of some of the loveliest free growing rambler varieties. The group from William Paul & Son was one of the finest. The large plants in pillar form of *Crimson Rambler*, *Lady Gay*, *Dorothy Perkins*, *Waltham Bride* were covered with their showy flowers and attracted much attention.

Most beautiful of all the new roses was *Hiawatha*, a single flowered variety. The flowers, which are about an inch across, are of a soft crimson or rich deep rose color; the centre of the blossom is almost white, although this, which adds to the beauty of the flower later, is hidden for the time being by the bunch of yellow stamens. These, too, add a distinct charm to the flower. The blossoms are produced most freely and the plants of *Hiawatha* were generally pronounced to be the most striking feature in the show. Evidently this rose is the result of a cross between a multiflora and a *Wichuraiana*: the influence of the latter seems to be most marked. The growth is a good deal similar to that of the other well known *Wichuraiana* forms, although the leaves are larger. This rose was shown by several exhibitors. It received an award of merit. *Kathleen*, another very charming single flowered rambler rose, also received a similar award. Its flowers are rich pink in color, a most pleasing shade.

The rose *Richmond*, which is apparently a favorite with American growers, and described here as a glorified *Liberty*, was well shown, and the new *David Harum* (hybrid tea) pink with beautifully formed reflexing petals was noticeable in the exhibit from Paul & Son.

An award of merit was given to *Rhododendron Marchioness of Tweeddale*, shown by John Waterer, Bagshot. This is a beautiful new variety, rich rose with a pale yellow blotch on the upper petal of each flower. The truss is well filled up and stands erect. This was the only new *rhododendron* to receive an award. John Waterer showed a magnificent lot of his famous *Pink Pearl rhododendron*.

Jackman & Sons set up a very fine lot of clematis in many good sorts. A new variety called *Lady Northcliffe*, a large flower of the *Jackmani* type, and nearly pure white, received an award of merit.

Some magnificent new double begonias were shown by Blackmore and Langdon, begonia specialists. Begonias *Alice*, buff with rose margin; Mrs. Blackmore, deep salmon-pink, and *Millicent*, clear pale salmon, obtained an award of merit and were much admired. *Vitis Henryana* is a beautiful new Virginian creeper with bronzy green leaves, silvery mid-rib and veins. It is a very attractive hardy climbing plant. It was found by Dr. Henry in China and introduced by Dr. Wilson for Messrs. James Veitch & Sons. It was exhibited at the Temple Show by Hobbies, and obtained an award of merit.

Harry H. Thomas

Show and Decorative Pelargoniums for Commercial Purposes

Every year as our pelargoniums come in flower we have numerous inquiries from private individuals as to where they can procure such varieties as are included in our collection and we have always to give the same answer, that so far as we know they are only to be found on a few private places. We do not intimate by this that there is no commercial firm which does handle this line of plants, but if grown we are certain they are not very extensively advertised; in fact, very few of the large seed establishments having a nursery and greenhouse department catalogue them at all, and if a few varieties are listed they are generally so poor and out-of-date that the public could hardly be expected to show any great interest in them.

How different the conditions are in Europe, especially in the British Isles, where every firm of any repute carries most of the new and standard varieties and in nearly every home will be found a pelargonium of some kind.

We are of the opinion that our florists have not given this subject their best attention so far, probably because they think the old slow method of growing them is the only way. Pelargoniums, like many other plants, will stand a little hustling and not be any worse of it; we think they rather enjoy it. The old method of growing them anywhere between the freezing point and 45 degrees is very good for large specimen plants, or if they are not required to bloom before the month of June, but the florist requires something that will bring quicker returns.

It has been our custom for a few years back to put in a batch of cuttings about the beginning of September, when our old plants are cut back, and, for lack of room in our cold greenhouse, we have grown them in the carnation house, which is kept at 52 degrees during the winter months, and the result has been a nice lot of plants in six-inch pots coming into bloom the latter part of March or the beginning of April, just at a time when we are getting weary of the usual routine of winter flowering plants. We get larger flowers at this season than later on, probably on account of the weather being cool, and the plants if put in colder quarters when coming in flower will last for months. This method, we think, ought to be a profitable one, even if only a limited number is grown to start with. If well advertised we are certain that private gardeners would purchase quite a number, say in 2 1-2-inch pots to grow on, if they could be procured from a local firm.

The cultural directions for pelargoniums are very simple, but it is the simple things we keep forgetting, and the few plants we have seen on commercial places bear evidence of this; they also seem to have most of the abuse bestowed on them. Our cuttings are inserted in sand the last week in August or the beginning of September, potted off into 2 1-2-inch pots as soon as ready, and when they are well started into growth the tops are pinched off. They are next shifted into 4-inch pots and when well established in this are pinched again, and if required to flower early this second and last pinching should not be done later than the middle of December. About the beginning of January they ought to be ready for six-inch pots, and for this potting we use three parts fibery loam to one part old cow manure well broken up and thoroughly mixed, the soil rendered quite firm in potting, otherwise the shoots will

lengthen more than is desirable. The plants should stand as near the glass as possible and must not be over-watered during the dull winter months. A little weak manure water may be given before the buds open, but we think that for florists they will stand in flower much longer if not fed at all.

There is so very little difference between the show and decorative varieties that we need make no distinction here. The show varieties have the most perfect flowers and are more extensively grown, the decorative being more compact in habit and coming earlier in flower. There are a great number of grand varieties, but a good many come very near to each other in color. The following are distinct and have proved satisfactory in every way:

Bridegroom, daybreak pink, maroon blotch on top, fimbriated petals. Bluebeard, top petals purplish-carmine, lower petals lilac pink, center white. H. M. Stanley, deep carmine, maroon blotch on upper petals. Lady Duff, rose pink, center white. Mabel, top petals dark velvet maroon, lower petals mottled with white. Madame Thibaut, white, marbled with light rose, fimbriated. Miss Henderson, lilac-pink, purplish-lilac blotches on top petals. Mary Malet, daybreak pink, orange-scarlet blotch on top petals. Mrs. Ashley, scarlet, maroon blotches. Mrs. Robert Sandiford, white. Nellie Hayes, white with purple tinge, purple blotch on top petals. Purity, white, delicate pink blotch on upper petals. Triomphe de St. Mande, deep crimson, maroon blotch on top petals.

James Stuart

Rose Mme. Norbert Levavasseur

Of the recent introductions among roses, this, the so-called Baby Rambler, caused considerable comment at the time it appeared. It is rarely heard of or seen in any quantity, though many thousands have been disseminated during the past two years. Adverse reports have reached us in the past regarding its shortcomings and, as often happens, one sometimes becomes prejudiced unduly without sufficient evidence or proper examination.

When this rose was new we secured two lots, one of small own-root stock, the others strong grafted plants in 6-inch pots. The behavior of both under glass was enough to cause vexation to the most pious, owing to the persistence of mildew and red spider; consequently both lots were planted out among other roses to take their chance.

Last fall the own-root plants were banked up with the H. P. varieties; the stronger grafted ones went unprotected with the Crimson Ramblers, with the result that the ones on own roots died while all the others lived, are clean, vigorous, and covered with buds, promising a great display shortly—proving that under certain conditions this new introduction is a very desirable one.

It is a sad mistake to call it the Baby Rambler; it seems to have no tendency to ramble, but on the contrary is distinctly a dwarf bedding rose and, as such will have a future if grafted stock is used. Roses are not usually a success when used as permanent occupants in the decorative way; their season is too short when in bloom, and after that, the place that knows them is too

often the spot to display insecticides and fungicides, owing to the number of ills the rose is heir to; but it is safe to predict that Mme. Norbert Levavasseur together with Gruss an Teplitz will be often seen in the future in the flower garden proper, this last named being of fine color and vigor, and a continuous bloomer until late in fall.

A good washing with Ivory soap used while warm, one bar to half a barrel of water, will rid the plants of all plant lice and the rose bugs do not like it. The value of this remedy lies also in its absolute cleanness; one can use it with impunity on piazzas or any other part of the dwelling without creating an uproar, as it cleanses everything it touches. Ivory soap is also a sure cure for rose mildew, but must first be dissolved in very hot water.

E. O. Orpet.

My Experience with Peony Lady Alexandra Duff

My first importation of this variety was in 1901. The whole lot of five plants did not bloom sufficiently the next year to determine definitely what they were; but the imperfect blooms led me to question them and I ordered five more plants to come in fall of 1902. When the first set bloomed they were clean Festiva Maxima. The second lot bloomed well in 1904, and at the June exhibition at the Massachusetts Horticultural Society I was awarded a first-class certificate for that variety. The same year, one week later, at the rose show of this same society, Messrs. T. C. Thurlow & Son showed another variety imported by them for this same variety. Now, this year, Mr. Wm. Whitman's gardener from Brookline, Mass., exhibited still another variety for Lady Duff.

This is the way the whole lots have turned out:

My first importation all turned out Festiva Maxima.

The second lot have all turned out Grandiflora Nivea—a most charming French-white beautiful peony.

The third lot, imported by Thurlow & Son, have turned out to be just the same as some which came to me in my very first importation under the name of Princess of Wales, and also another variety which came later named James Kelway. I have also had this same James Kelway under its proper name as we suppose from another American grower.

The fourth lot, which was shown by Mr. Sullivan, gardener to Wm. Whitman, was the old and choice Peony Duchess de Neumours (Catal.), a very fine variety.

There is no comment to make on this, only that the Lady is quite numerous and changeable. My firm belief is that there is no such variety. It is only a re-naming of old varieties and when the stock of one gets low, select another and so keep up the fraud.

E. J. Shaylor.

Wellesley Hills, Mass.

Agapanthus umbellatus

There are few plants comparable to this plant for effective landscape adornment in late summer or early fall; it is especially well adapted to give grace, life, and character to the much-in-vogue so-called "Italian style of gardening." Its effective blue flowers contrast finely with the gray or white masonry, and the gracefully arching dark-green foliage is equally efficacious. In order to thoroughly appreciate the decorative value of the plant, large specimens must be had in tubs or pots. As it increases rapidly under liberal treatment the attainment of fairly large plants requires a comparatively short period of years.

When the desired sizes are procured, it is best not to disturb them for many years thereafter, as they will flower much more profusely in cramped quarters. The fact must be ever present to the man in charge that they have arrived at the cramped-for-room stage, and therefore he must make amends by providing ample stimulants in the shape of commercial fertilizers. They are not particular as to brand, provided it has all the essential elements that plant life calls for. When equipped with their ample foliage in the growing season, the amount of water they require, stimulant and otherwise, is great. These plants are particularly charming associated with running water, and dotted here and there on the margin of ponds and lakes, as well as along driveways, piazzas, etc.; in short there is hardly a situation but what they will tend to embellish on a well-appointed estate. One of my pleasantest recollections of a visit to Lenox a few years ago was of seeing quite a number of fair-sized plants dotted along the terraces and grounds of Lenox's wealthy estates.

Considering that greenhouse room is not necessary to winter, these plants from year to year, it is strange that there are not more of them to be seen. All that is necessary to winter them all right is a good frost-proof pit of cellar, not too dry or too clammy. Of course it is unnecessary to say that watering is to be dispensed with while they are in their quarters, and should be gradually suspended in the fall ere they be taken in; the firmer the tissues of the plants the better they will withstand low temperatures.

There are a number of varieties, but common umbellatus, taking it all in all, is more satisfactory than any of the others. A. Mooreana, however, is a nice miniature variety, useful for table and house decoration on account of its low stature and free-flowering proclivities. It is nearly hardy, quite so in Europe, at least the most climatically favorable parts thereof. A. um. maximus is a fine variety, as far as size of umbels is concerned, but not so free as the subject of this note. A. um. albidus, white-flowered, is also somewhat shy in producing flower scapes. There is also a silvery variegated and a golden variegated, pretty only for their foliage.

A national arboretum One of the best suggestions made at the Washington meeting of the American Association of Park Superintendents was that offered by Jackson Dawson and applauded by the members, recommending the establishment of a national arboretum at Washington. Not only would this greatly enhance the attractions of our already beautiful Capitol City but it would exert an immense influence in the horticultural advancement of the people of the entire country. Words cannot express what Boston's Arnold Arboretum has accomplished in this direction since its foundation. Its stately forest trees, its romantic scenery, its plantations of rich flowering shrubs, its interesting botanical groups affording the best of opportunity for study and comparison, are but the surface indications of what this unique feature of Boston's great park system is doing for the people. It is already the Mecca of the lover of Nature's best products and should serve as a stimulus not only to Washington but to many other sections of our country to establish similar institutions in their midst.

Keeping peony flowers The peony society has a problem to solve similar to that which has vexed the carnation society for many years, viz.: the cause of the wilting of flowers on the exhibition table. Horticultural Hall, Boston, has proved to be an admirable place for keeping flowers in good condition—much better in this respect than most exhibition halls—yet many of the peony exhibits last week made a sorry sight on the second day. Flowers shipped from a distance were the greatest sufferers in this respect but the trouble was by no means confined to these. One observant peony grower states it as his belief that the peony is irreparably injured by being kept any length of time out of water after cutting and that he makes a practice of having a tub of water handy in which he plunges blooms one after the other as they are cut, instead of carrying them about in the hand or a basket until a load has been gathered as is a common custom. Wide necked vases with an abundance of water frequently renewed and the avoidance of any crowding of the stems would

doubtless go far towards keeping exhibition blooms in good shape. It is to be hoped that the trouble will not prove so obstinate as in the case of the carnation—or as to discourage the peony enthusiasts from keeping up these exhibitions of this charming and useful flower and securing for it the widespread popularity it merits.

Gardening art Modern travelling appliances and comforts have given a tremendous impetus to the suburban home idea and thus rendered an inestimable service to horticulture and

to those who follow horticulture as a profession. We have already had occasion to call attention to the great opportunity thus thrown open to the florist and gardener to elevate and broaden his line of work and take possession zealously of this fertile field which holds out so much of promise. The call for hardy garden material, large as it has become, is bound to increase immeasurably. The public are bound, sooner or later, to realize the shallow and misleading nature of much of the descriptive and cultural stuff presented to them by a certain class of hysterical amateurish writers, much in evidence of late, and will learn to look to the straight horticultural profession for advice and assistance in arranging and caring for their gardens and the contents thereof. This big field exists in every community on this continent and, while it may have but little attraction for those engaged in large landscape operations, yet its problems will be found complex enough to call for a high quality of artistic ability. "Scope for the play of sunshine and shadow, haze and mist," may not enter into these minor operations, individually, but the same underlying principles of good taste, balance, and picture creating will need to be mastered and for those who undertake it in the proper spirit adequate recompense will be promptly forthcoming.

Wherein we lack If it be true that, as has been said, cities usually reflect in their external aspects the tastes, customs and intellectual desires of their inhabitants, then it will

be conceded that the people of many of our cities are sadly in need of education in taste and refinement. Rudyard Kipling has publicly called attention to the conspicuous absence of gardens—gardens in the English sense of the word—in all sections of this country. We think the censure is merited. The culture of flowers is woefully neglected by the masses and the absence of the bits of verdure and bright color which, we are told, adorn the homes of comfort and soften the squalor of back yards and brighten the window ledges of the tenement districts abroad, is a most regrettable fact. Flowerless windows suggest that something is lacking within. Again, while it is true that anything whatever in the way of verdure is far better than nothing at all, it must be admitted that evidences of discriminating taste in arrangement are none too plenty in such gardens as we do see. Our public grounds, which might and should serve as object lessons for the people, are in many instances excellent examples of how not to do it, and the average window box with its inappropriate material and incongruous colors emphasizes the fact that we are far from the ideal in our perceptions as regards these things. The park superintendent, the florist, and the gardener are in a position to exercise a powerful influence in shaping and directing the public taste but they must see to it that the inspiration is on the right lines.

CONCERNING LANDSCAPE ART.

The editorial in your issue of June 2, commenting on that in the National Nurseryman criticising the action of the Boston Gardeners' and Florists' Club, meets my hearty approbation and I think the writer of that criticism shows more than the ordinary supply of prejudice. To be a successful private gardener one must have a working knowledge of landscape work. A certain visitor once remarked, "Catch a Scotchman when he is young and there can be something made out of him." The same applies to young gardeners; get the idea instilled into them by competent parties, and the knowledge will never leave them. Landscape gardening is an art which very few can master thoroughly. Some men can lay out a rough lawn, throw a few shrubs in one corner, stick a tree in here and there, and there you are; they have cards printed styling themselves Landscape Gardeners.

A ready-made landscape gardener is against nature. The ideal landscape of an estate should be made by the head gardener; he being there all the time can observe and study better and bring a piece of landscape work closer to nature. The ideal landscape is the work of years. I have just read the report of the Boston committee published in HORTICULTURE over Mr. Pettigrew's name. It certainly embodies what a young gardener should aspire to.

Not long ago one of your contemporaries commented in rather a humorous vein upon friend Hatfield's visit to Scotland, noting that he didn't see there anything as good as was in Wellesley. Hatfield started off wrong. If he had inquired for some of the "Grunts of the Greybaird," after having partaken of that mellow stimulant "goodness knows what he might have seen." Conifers would have seemed like mountains, friend Hatfield would have given us a better account of his trip to the Land o' Cakes, and would have been loud in his praises of the people's hospitality. Next time he goes there let him try the above incentive and he will return home vowing he never before saw anything like it.

R. T. MCGORUM.

PERSONAL.

Miss Lulu, daughter of J. J. Beneke, of St. Louis, was married on June 14 to Rudolph Bremer.

Mr. and Mrs. John H. Taylor of Bayside, N. Y., sailed on Saturday, June 16, for Europe.

T. Mellstrom, American agent for Sander & Sons, of St. Albans and Bruges, sails for Europe on June 28 on the Deutschland.

Visitors in Boston: Miss Rennison, Sioux City, Ia.; Mr. and Mrs. W. Atlee Burpee and Mr. and Mrs. Alex. Scott, Philadelphia; Mr. and Mrs. Hugh Dickson, Newtonards, Ireland; J. W. Rodgers, Cincinnati, O.; S. S. Skidel-sky, Philadelphia; James MacPherson, Trenton, N. J.; John Urquhart, Newport, R. I.; Wm. Burton, Bar Harbor, Me.

PLANT NOTES.

Large quantities of cross fertilized kniphofias are being grown at the Botanic Garden, Washington, for general distribution next year.

Lady Larpent's plumbago (*Cerato-stigma plumbaginoides*) is one of the most beautiful hardy plants particularly adapted for rock-work planting.

Of the Japanese maples, *Acer dissecta* and *atropurpurea* can be relied upon to come true from seed.

Abelia rupestris fairly hardy as far north as New York city is a charming plant for half shaded dells. Commencing now to expand its sweet-scented little pink tubular flowers it will continue in bloom until late fall. In northern latitudes it will need the protection of a few evergreen boughs in winter.

Hydrangea acuminata is a strikingly beautiful hardy shrub of robust growth, with large foliage and lilac-tinted flower-heads. It is in bloom now and is worthy of a place in every large garden.

Bignonia Hunteri is a new species found wild in Virginia by a Mr. Hunter. The flowers are yellow. We hope to figure it in our columns at a later date.

Ligustrum Quehova is a grand new shrub. The foliage is narrow and pointed and the flower racemes are very long and branching. It blooms late in June and again several times during the rest of the season.

That popular basket plant, *Ophiopogon Juburan variegatus* deserves a more general use as a half-hardy edging for large flower beds. Few variegated plants stand the vicissitudes of garden existence as well as this does.

Peter Bisset pronounces the double-flowered white *Nelumbium Osoras* now being heralded as a novelty to be identical with the Japanese *N. Shieoman* sent out some years ago.

BUSINESS CHANGES.

On and after July 1st, 1906, the business formerly conducted by Mr. Aug. Rhotert, at No. 26 Barclay street, New York city, will be continued by Mr. H. Frank Darrow, who has been associated in business with the late Mr. Rhotert for nineteen years.

"Pleased With the Results."

Editor HORTICULTURE.

Dear Sir:—I am very much pleased with the results obtained from my "ad" in HORTICULTURE. From one insertion I obtained orders for over 5,000 geraniums and over \$100 worth of Boston ferns.

Yours truly,
H. N. EATON.

"Sold Out."

Would like you to leave the Twice Transplanted Cyclamen out of ad., as I am sold out of them.

C. WINTERICH.
Ohio.

"Take All We Have."

We have just received an order from your ad. for over 9000 plants; that will take all the seedlings we have and small pots. Very truly,

A. RELYEA & SON.
New York.

OBITUARY.

Edwin B. Hay.

The many florists throughout the country who from time to time have been brought in contact with Col. Edwin B. Hay of Washington will be grieved to learn of his sudden demise on the 12th inst. The deceased was by profession a lawyer and enjoyed a national reputation as a lecturer and after-dinner speaker. He was a great lover of flowers and was rarely seen without one in his buttonhole. He was well known to the local trade and took an active interest in all things pertaining to floriculture. At the shooting tournament of the last S. A. F. convention he presented the prizes to the successful contestants in one of his characteristic speeches, which was filled with beauty and sentiment.

A man in whom the highest gentlemanly instincts were inbred, he greeted the humblest toiler with the same graciousness which marked his manner with the highest officials and statesmen with whom he was daily thrown in contact. Thoughtful and considerate, sympathetic and kind, a man of ready wit, yet no one could ever say that the brightness of "Ned Hay" was caused to shine by the dimming of some other star, for he believed in the brotherhood of man and saw and recognized the latent "talents" and good in every man.

Frank C. Moninger.

On Saturday, June 16th, at his home 166 Cleveland Ave., Chicago, one of the first men to manufacture greenhouse construction material in the west, Frank C. Moninger, passed away at the age of 85. He was the father of Lena and Lambert Moninger, and the late John C. Moninger.

Mr. Moninger was born in Germany in 1821 and came to this country when a boy, settling in his early youth in Chicago. He was identified from the start with the interests of the truck gardeners and florists located north of the city in what is now High Ridge, Rogers Park, Bowmanville and Edgewater, manufacturing as far back as 1849-1854, sash for greenhouse construction. Geo. W. Miller and George Wittbold were two of the first customers for greenhouse sash, and other florists in the vicinity of Chicago built with his material shortly afterwards.

Mr. Moninger early recognized the fact that the increasing demand for better material and lighter construction would mean the specializing of the work, with which thought in mind he formed a partnership with the late John L. Diez, making at that time in 1869 the first sash bars for greenhouses manufactured in Chicago—these sash bars were furnished Geo. W. Miller. The business flourished under his guidance and when finally succeeded by the son, John C. Moninger, nearly every florist in or around Chicago had been a customer for his material. The present firm of John C. Moninger Co. is the result of the start made by Frank C. Moninger and the manufacture of material has now been carried to a state of perfection and the business developed to an extent of which the founder of the firm never anticipated or dreamt.

NEWS OF THE CLUBS AND SOCIETIES.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The June meeting of this busy organization was held under the most pleasurable conditions. In the afternoon a delightful trip to two of Brookline's most elaborate and renowned gardens—in the evening a splendid session at Horticultural Hall with over one hundred in attendance all being in that merry mood consequent upon a well-spent and instructive outing.

Eighty-five of whom fifteen were ladies participated in the Brookline visit. At the estate of Mrs. E. N. Brandegee presided over by David Weir, the first place visited, and at the Lars Anderson estate where Duncan Finlayson holds forth, the most profuse hospitality was shown the visitors; private conveyances met them at the cars and refreshments were served; the magnificent Italian gardens were thrown open for their inspection and every facility for enjoyment was provided.

A collation of strawberries and ice cream was served previous to the opening of the evening session at the Hall. The proceedings were mostly informal, no regular program having been announced. A communication from the American Peony Society acknowledging the club's courtesies was received. Votes of thanks were extended to the generous hosts of the afternoon. An invitation to spend an afternoon with Wm. Sim, ladies to be included, was accepted unanimously. It was decided to hold the annual picnic at Caledonian Grove in West Roxbury in latter part of July. W. H. Elliott presented a request from the executive board of the S. A. F. that the club select one of its members to present a paper at Dayton on the "Ideal Gardener and His Work," and this duty was assigned to the executive committee. W. J. Stewart asked for a substantial attendance from Boston to the Dayton meeting. An invitation received from the North Shore Horticultural Society to attend their rose show June 27 and 28 was read. Visitors present from a distance were C. W. Ward, Queens, N. Y., J. W. Rogers, supt. of parks, Cincinnati, O., and S. S. Skidelsky of Philadelphia. Each of these gentlemen responded to the call of the chair and said a few appreciative words.

On the exhibition table there were several interesting things. Alfred Portsch showed a new heliotrope Frau Ledele, a plant 4 months old bearing enormous foliage and a flower truss ten inches in diameter; also Impatiens Sultani X Holstii, an excellent pot plant, more compact and floriferous than the parents. The heliotrope received an award of merit and the impatiens, honorable mention. Asparagus plumosus var. Crawshawii from James Crawshaw received a report of merit. A similar award was given to Chas. Sander for rose W. C. Egan, a double-flowered pink hardy garden variety raised by Jackson Dawson, a cross between Wichuriana and Souv de Wootton. Eremurus from Mt. Desert Nurseries received a report of superior merit. Blue Hill Nurseries were accorded honorable mention for Acer

negunda Odessianum and for peony Jenny Lind. The question box being opened, disclosed some very puzzling inquiries. Among them were, How to get rid of cut worms, Where, if anywhere, have the large varieties of narcissuses of the Emperor type become naturalized in this country, and Where can peony supports be procured? Various remedies for the cut worm were recommended, from giving him the axe to sterilizing the soil, narcissi were said to be well-naturalized in one place on Cape Cod, and Igoo Bros., Brooklyn, N. Y., were recommended as the right parties to supply peony supports.

AMERICAN ROSE SOCIETY.

The Executive Committee of the American Rose Society met in New York City on Thursday, June 14. President Alexander Montgomery being unable to be present, vice-president Robert Simpson occupied the chair. The others present were treasurer Harry O. May, secretary William J. Stewart, Messrs. F. R. Pierson, A. Farenwald, H. A. Siebrecht, W. A. Manda and Peter Bisset.

The question of the location for the next meeting and exhibition of the society, which has been left to the committee to decide was discussed at much length. An official invitation from the Washington Florists' Club was read by the secretary and the eligibility of several other cities was discussed informally, the result being an unanimous vote in favor of Washington, D. C. Wednesday, Thursday and Friday, March 13, 14, 15, 1907, were selected as the dates for the annual meeting and exhibition.

The president-elect, Robert Simpson, was authorized to appoint a committee with power to prepare a schedule and the exhibition rules were revised so that all exhibitors not members of the Society shall pay an entrance fee of three dollars, same to be applied as membership initiation fee.

Mr. Bisset, representing the Washington Florists' Club, as its president, informed the committee that it is the intention of that organization to give a general horticultural exhibition in connection with the American Rose Society's show. Arrangements were then made, subject to ratification by the Washington Florists' Club, for a joint schedule and joint participation in the net profits, if any, after the expenses of the exhibition had been paid.

WM. J. STEWART, Secretary.

LENOX HORTICULTURAL SOCIETY

The regular meeting of the Lenox Horticultural Society was held June 16, President S. Carlquist in the chair. Wm. Henry, gardener to Grenville Winthrop, was awarded a diploma for a grand display of peonies. H. Schmieske brought up, on behalf of the Gardeners' Chronicle of America, the matter of building a home for aged gardeners, which was thoroughly discussed, but nothing definite arrived at, as detail seemed to be lacking. Everything promises well for a good show on the 26th.

GEO. FOULSHAM, Secy.

MASSACHUSETTS HORTICULTURAL SOCIETY.

The annual peony show, in connection with the exhibition of the American Peony Society, held on June 15 and 16, filled the large hall, mainly with peonies, and partially filled the smaller halls. There were numerous exhibits, large and small, and the number of varieties included was very large. As a rule the blooms were badly up to standard, although some individual blooms and groups of blooms were very fine. In many instances the flowers wilted badly, those coming from a distance suffering most in this respect, so that on the second day much of the show was seen at a disadvantage. Nothing sensational or strikingly novel was noted among the varieties, old and new. Marguerite Gerard, shown by Mr. Shaylor, was again, as last year, the most generally admired variety in the hall. The single and Japanese varieties attracted considerable attention, being shown in greater number than heretofore, but on the second day many of the singles shed their petals.

Outside of the peonies there was much to be seen. A tank of handsome aquatics from Mrs. Oliver Ames, a table of gloxinias, profusely flowered, from Mrs. J. L. Gardner, a remarkable display of great flower spikes of eremurus in several varieties from Mt. Desert Nurseries, gladiolus cardinalis in three handsome varieties from W. W. Rawson, an extensive display of hardy herbaceous flowers elaborately labeled and described from the Blue Hill Nursery, and a group of *Miltonia vexillaria* of rare beauty from Langwater Gardens, W. N. Craig, gardener—these were among the most noticeable exhibits.

The Kelway silver gilt medal was won by Wm. Whitman, and the bronze by George Hollis for collection of eighteen named varieties of peonies. Other prizes were awarded respectfully as follows: Thirty or more varieties, Wm. Whitman, H. A. Stevens Co., James McKissock, George Hollis, T. C. Thurlow & Co.; twelve double, Wm. Whitman; specimen bloom, Dr. C. G. Weld, T. C. Thurlow & Co.; twelve single, T. C. Thurlow, Wm. Whitman; Japanese single, Geo. Hollis; vase of blooms on long stems, Dr. C. G. Weld, E. L. Lewis, E. B. Wilder; six double white, A. H. Fewkes, T. C. Thurlow, H. A. Stevens Co.; six rose pinks, A. H. Fewkes, H. A. Stevens Co.; red, T. C. Thurlow & Co., H. A. Stevens Co.; twenty-five white, H. A. Stevens Co.; pink or rose, T. C. Thurlow & Co.; red, Wm. Whitman, H. A. Stevens Co. A silver medal was awarded to Wm. Miller of Mt. Desert Nurseries for eremurus. Honorable mention was given to W. W. Rawson for gladiolus Cardinalis Ackermanni, and to F. J. Rea for *Anchusa Italica* var. Dropmore. W. N. Craig got a cultural certificate for miltonias.

AMERICAN PEONY SOCIETY.

The annual meeting of the American Peony Society was held in Horticultural Hall, Boston, on Friday p. m., June 15. Among the members present

were President C. W. Ward, Queens, N. Y., Secretary A. H. Fewkes, West Newton, Mass., C. S. Harrison, York, Neb., G. H. Peterson, Fair Lawn, N. J., E. B. Hedges and H. J. Mullen, Westfield, Mass., E. A. Reaves, Cleveland, O., B. H. Farr, Reading, Pa., and J. Eliot Coit, Ithaca, N. Y., and a number of local members.

The meeting opened with an address by President Ward. Then followed the annual reports of secretary and treasurer. The secretary reported the present membership as thirty-seven active and two honorary members. He said that, since the last meeting, he had been in correspondence with Prof. Whetzel of Ithaca in regard to the fungus which attacks the peony stem and leaf and that a report of the result of the investigation will be made later. Referring to the exhibition made one year ago in connection with the meeting at Chicago, the secretary said that this show proved the practicability of exhibiting flowers which have been shipped from a distance and placed in cold storage. "While they are in no way equal to freshly cut specimens it makes it possible to preserve early varieties for late shows, thereby making the exhibition more interesting. As nearly every flower exhibited was named it made a very instructive exhibition for the identification of varieties and in many cases illustrated the comparison existing in the nomenclature of the flower. A feature which was entirely lacking was the display of flowers grown especially for exhibition purposes. While this is perhaps a matter which usually concerns the amateur it is one which should receive the attention of the commercial grower as well. He would find himself amply repaid by making a plantation of a few specimen plants of each of his varieties giving them extra attention in the way of fertilization, water, and staking."

The report of the treasurer showed receipts of \$491.67 and expenditures of \$135.93, leaving a balance on hand of \$355.74. An invitation was received from the Jamestown Exposition officials and the Pomological and Horticultural Society of Norfolk, Va., to hold the next meeting there; also a letter from Prof. Bailey of Cornell inviting the society to meet at Ithaca, N. Y., and the latter was accepted. All the old officers were unanimously reelected for the ensuing year and J. F. Rosenfield of West Point, Neb., was elected a new director.

The exhibition was held in connection with the annual peony show of the Massachusetts Horticultural Society. Messrs Jas. Wheeler, W. N. Craig and Wm. Nicholson served as judges. The awards were as follows: Collection of varieties, one flower of each, first, George Hollis, second, T. C. Thurlow. Twelve varieties six flowers of each, first, C. W. Hoitt, second, T. C. Thurlow. Fifty blooms white, first, T. C. Thurlow, second, C. W. Hoitt. Fifty blooms pink, second T. C. Thurlow. Fifty blooms crimson, first, E. A. Reaves, second, T. C. Thurlow. In three classes for private growers only James McKissock won first prize.

While the judges were preparing their report a general discussion was carried on by Messrs. Ward, Harrison, Coit, Reaves and others on various topics. Protecting plants with cheese

cloth or similar shelter while the buds are developing was advocated for some varieties which open their flowers imperfectly. Mr. Harrison urged the preparation of a peony manual on the same plan as one recently published by him but on a larger scale. He thought that the western and northwestern agricultural and horticultural journals might be prevailed upon to publish special peony numbers and in other ways help to keep up peony agitation, it being a fact that the paradise of the peony is the far north where the cool air and freedom from hot sun make an ideal climate for it. Mr. Coit said that the rotting down of stems is due to the brown mould common to rich garden soils and is only a temporary local infection. Some varieties are more susceptible to it than others. The practice of hilling up around the stems of peonies as is done by some nurserymen for the purpose of getting buds for propagating purposes was condemned by several speakers, the plants thus propagated showing much weakness and failing to bloom for many years. The old-fashioned division of roots—once in two years—was approved as the best method of propagation. In cutting flowers it was advised that at least two leaf stalks be left on the plant.

It is expected that the new Horticultural Hall at Cornell will be finished in time for the 1907 meeting.

NASSAU COUNTY HORTICULTURAL SOCIETY.

The regular monthly meeting of this society was held on the evening of Wednesday, June 13th. The meeting was well attended, with President Harrison in the chair. The floral exhibits this month were confined chiefly to roses, of which some grand blooms were staged. The prize for twelve varieties of out-door grown roses was awarded to H. F. Meyers. In the scale of points' class. A. MacKenzie scored 98 with a vase of delphiniums, collection of strawberries and dish of peaches; S. J. Trepass 96 2-3 for vases of carnations, Canterbury bells and roses; H. Meyers 93 1-3 for roses; S. Harrison 83 2-3 for roses; P. Ewen 83 for lettuce and C. Lenker 78 for peonies and roses.

C. Bertenzel made some interesting and practical remarks on growing American beauty roses, which are to be followed at the next meeting by a more exhaustive paper on the same.

A box of cigars for sweet peas in three varieties, twenty-five of each, will be competed for at the next meeting.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Department of Plant Registration.

Henry C. Fruck, Grosse Pointe Farms, Mich., submits for registration the following named ferns:

Nephrolepis Fruckii.—Parentage supposed to be *N. Wittboldii*; frond light green, thick, glossy, pinnae long and wavy; plant compact and of medium height. Three years old and so far has shown no sign of spores.

Nephrolepis Berryii.—Has all the characteristics of *Fruckii* with the exception of its dark green, somewhat narrower fronds and the runners being rather finer.

WM. J. STEWART, Sec'y.

SOCIETY FOR HORTICULTURAL SCIENCE.

The fourth annual meeting will be held in Morrill Hall, Cornell University, Ithaca, N. Y., June 27 and 28, in connection with the meeting of the American Association for the Advancement of Science.

Papers will be given as follows: "The Field for Experiment in Horticulture, President L. H. Bailey, Cornell University; "The Relation of Winter Apples to Hardiness of Tree, W. T. Macoun, Ottawa Experiment Station; "The Use of Ether in the Forcing of Plants," William Stuart, Vermont Experiment Station; "Geotropism of the Vine in Its Relation to Congenial Stocks for Vinifera Varieties," E. C. Green, Texas Experiment Station; "The Use of Colored Cloth in Shading Plants," W. R. Lazenby, Ohio University; "Pollination Methods," S. W. Fletcher, Michigan Agricultural College; "Inter-pollination of Fruits," V. H. Davis, Ohio University; "Some Notes on Pollination," N. O. Booth, New York Experiment Station; "Does Experience Show a Real Advantage from Double-Working Apples on Vigorous Stock?" F. W. Card, Rhode Island Experiment Station; "The Importance of Selection in Plant Breeding," Earle J. Owen, New Jersey Experiment Station; "Influence of Artificial Light on Plant Growth," John Craig, Cornell University; "What Is to Be the Future Application of the Term Horticulture?" L. C. Corbett, U. S. Department of Agriculture; "Dwarf Apple Orchards in the United States," Chas. D. Wilson, Cornell University; "Apple Rots in Commercial Cold Storage," H. J. Eustace, New York Experiment Station.

The following are the officers and committees of the Society for Horticultural Science for 1906: President, L. H. Bailey; vice-presidents, G. B. Brackett, T. V. Munson, E. J. Wickson; secretary-treasurer, V. A. Clark; assistant secretary, U. P. Hedrick; executive committee, L. H. Bailey, president, ex-officio; W. M. Munson, W. R. Lazenby, chairman; W. L. Howard, John Craig; programme committee, C. P. Close, chairman; B. D. Halsted, R. A. Emerson, W. A. Taylor, W. Stuart, V. A. Clark, secretary, ex-officio; committee on nominations, L. C. Corbett, F. W. Rane, N. E. Hansen, W. W. Tracy, S. A. Beach; committee to consider the matter of the Society's publishing a periodical, L. H. Bailey, V. A. Clark, C. B. Smith.

MORRIS COUNTY GARDENERS' AND FLORISTS' SOCIETY.

The Morris Co. (N. J.) Gardeners' and Florists' Society, held its regular monthly meeting on June 13th. President John Heeremans read a paper on Vegetables for Exhibition. It was fully appreciated, the speaker receiving a rising vote of thanks. Mr. Heeremans' remarks were timely, and the fact that he is one of our prominent exhibitors added weight to his words. Thirty-four members besides the officers were present. Secretary was ordered to write a letter of protest on behalf of the society to the U. S. Express Co., against their exorbitant rates on flowers. Proofs of the flower show schedule were on hand; \$150 in cash prizes are offered. Several changes are made and the prospects are the best we ever had for

a fine show. It will be held in Madison, Nov. 1st and 2nd next. A. Her-
rington exhibited six vases of the
newer sweet peas in six varieties and
a large batch of Paeonia Lemoine, an
excellent late variety—the only ex-
hibit we had. He got the society's
cultural certificate. Treasurer Wm.
Charlton who is ill at home, is to be
visited by a special committee of
sympathizing brothers.

The society adjourned its meetings
to next September as is the usual
custom of late years.

E. REAGAN, Secretary.

AMERICAN ASSOCIATION OF NURSERYMEN.

President Albertson in his opening
address at the Dallas convention re-
ferred to the past year as one of the
best and most prosperous in the his-
tory of the nursery business and saw
even better returns for the coming
year; dwelt briefly upon the great
benefits secured to the trade through-
out the country through the efforts of
the legislative committees in regard to
uniformity in laws relating to inspec-
tion, tags or certificates, and their
general adoption which if followed up
will certainly be accomplished; called
attention to the need of defeating an
appropriation by the Government for
free distribution of nursery stock
similar to the free seed distribution,
state license laws, etc., and the neces-
sity of keeping a careful watch on the
advantages gained through the trans-
portation committee to avoid a re-
versal.

He recommended action in connec-
tion with the representatives of the
National Horticultural Inspectors
Association in attendance, on the
securing the adoption of more uniform
methods of inspection, issue of certi-
ficates, use of universal tags or certi-
ficates, and possibility of securing
adoption or approval of same by states
now requiring that their special state
tags be used; also that the Association
be represented at as many of the
National Associations as possible
where matters of interest to their
business are to be considered, and at
the different meetings of the Freight
Committees.

The employment of one person who
could give his entire time to the work;
the selection of a good member in
each state to watch and report to the
legislative committee any proposed
legislation affecting the business and
effect such changes in existing laws as
would make for uniformity and re-
lieve the business of some of its bur-
dens, were recommended.

He suggested an increase in the
membership fee to \$5.00 and asked if
a guarantee fund could not be raised
out of the savings on the freight bills
alone, to provide funds for the main-
tenance of the work. Also that for all
standing committees except the execu-
tive, one member be appointed to look
after each department of the work and
he be authorized to call to his assist-
ance such help as he may need from
time to time from the most convenient
section.

He advocated a standard grade for
all kinds of nursery stock as against
the grading of different growers in
different sections.

AMERICAN SOCIETY OF PARK SUPERINTENDENTS.

The banquet tendered to the mem-
bers of this association visiting in

BYRON D. WORTHEN,
President-elect of the American Association
of Park Superintendents.

Washington, briefly mentioned in our
notes last week, was a most enjoyable
affair. Peter Bisset, president of the
Washington Florists' Club, presided,
and J. R. Freeman officiated as toast-
master. President Theodore Wirth
gave an interesting talk on gardening
conditions in Europe and America in
comparison. George H. Brown con-
tributed historical notes of the parks

F. L. MULFORD,
Secretary-Treasurer-elect of the American
Association of Park Superintendents.

of Washington. J. A. Pettigrew, in
speaking on the tree question, said
that Washington was the best planted
city he had ever seen. John Chambers
responded eloquently for Canada and

gave a glowing foretaste of what the
association might expect on the occa-
sion of its visit to Toronto next year.
Dr. Frank Baker recited some of the
trials of a park superintendent, and
Mr. Zartman and others joined in
grateful recognition of the courteous
hospitality of the Washington hosts.

On Thursday forenoon there was a
business session, and in the afternoon
the members were accorded the privi-
lege of a handshake with President
Roosevelt.

On Friday about fifteen of the vis-
itors went to Baltimore, where they
were cordially received, given a drive
through the fine park system of that
city, and then entertained by the park
commission with a sumptuous ban-
quet.

ELBERON HORTICULTURAL SO- CIETY.

At the rose and strawberry show
held by this society on June 11 there
was a fine exhibit of roses, cut flowers,
and strawberries. The principal
awards were as follows: Best 25 roses,
1st, J. Kennedy; best 12 roses, 1st,
F. Dettlinger; W. D. Robertson, special
prize for exhibit of cut flowers; A.
Bauer, first prize for vase of Baby
Rambler roses and special for vase of
paeonies; H. Hall special prize for vase
of oriental poppies; W. D. Robertson,
special prize for vegetables; A. Grieb,
special prize for vegetables and best
collection of strawberries; G. Conover,
first prize for best dish of strawberries.
The judges were Mr. Kennedy of
Oceanic and Harry Bunyard of New
York.

Arrangements for the flower show
which is to be held on July 13 and 14
were discussed, and everything seems
to indicate that the affair will be a
success.

GEORGE MASSON, Secretary.

MASSACHUSETTS HORTICUL- TURAL SOCIETY.

The annual rose and strawberry ex-
hibition of the Massachusetts Horticul-
tural Society will be held on Friday
and Saturday, June 22 and 23. Special
features of this show will be the nota-
ble displays of hardy roses from the
gardens of Miss Sarah B. Fay of Woods
Hole, under the superintendence of
that skilful rosarian, M. H. Walsh,
and from the estates of William Whit-
man of Brookline, W. J. Clemson and
Alex. McCready of Taunton, Mrs. J.
B. Lawrence of Abington, and Mrs.
E. M. Gill of Medford.

There will be also several collections
of late flowering peonies as well as of
other floral products from many of the
noted gardens in the vicinity of Boston.

It has been a favorable season for
roses and it is expected that the dis-
play will be an excellent one.

The exhibition which is free to all
will be open Friday from 12 to 6
o'clock and on Saturday from 10 to 6.

WM. P. RICH, Secretary.

CHRYSANTHEMUM SOCIETY OF AMERICA.

The Chrysanthemum Society of
America has accepted the invitation of
the Horticultural Society of Chicago to
hold its meeting in conjunction with
the above named society November
6th to 12th inclusive.

DAVID FRASER, Secretary.

AN OUTING AT CINCINNATI.

The outing committee of the Cincinnati Florists' Society have selected the Norwood Inn as the place for their picnic. Thursday, July 19, is the date. Most of the craft spent a day at this resort last summer on the invitation of Rusciani and George & Allan. There is a fine ball park in connection with the grounds, also bowling alleys where the members can do a little practice work preparatory for Dayton. The committee is making great preparations and a good time is assured all who attend. Liberal prizes will be offered for various games and sports.

CLUB AND SOCIETY NOTES.

The fifth annual convention of the National Nut Growers' Association is called to meet at Scranton, Miss., October 31, November 1, 2, 1906.

The annual exhibition of the North Shore Horticultural Society will be held on the grounds of the Essex County Club, June 27 and 28. The principal feature will be a rose and strawberry exhibit.

Remember the N. Y. Florists' Club outing at Witzel's Point View Grove, Monday, July 2, 1906. Tickets can be had of the committee, L. W. Wheeler, chairman; J. H. Pepper, secretary, or Joseph S. Fenrich, treasurer, 110 West 28th street, New York City.

The Tri-City Florists' Club met with William Knees in Moline, Iowa, on June 7, and after the transaction of business, an address by Frank Shurtleff of Moline on "The Vacuum System of Heating," and discussion of the picnic at the Watch Tower on June 28, the cornerstone of Mr. Knees' new range of greenhouses was laid and an appropriate speech was made by President John Temple. These houses will have steel framework and embody all the latest practicable devices. A feature of the meeting was the exhibition of 40 varieties of peonies by H. G. Bryant of Davenport.

At the meeting of the German Gardeners' Club of New Orleans on June 6 addresses were made by Mr. Wichert on aquatics and R. Eichling on lilies, of which he showed two species, *L. aureum* and *L. lancifolium rubrum*. This society has now twenty-two members, all German or German-speaking gardeners. It meets on the first Wednesday of every month, and after routine business the custom is to discuss the culture of some special plant. The present officers are: Louis Muller, president; Henry Kraack, vice-president; John H. Rinck, treasurer; Martin Gaillot, secretary; Robert Reincke, Richard Eilers and F. Brocker, directors.

FIRE RECORD.

A large barn belonging to D. Robinson & Sons, florists, of Everett, Mass., was entirely destroyed by fire on June 13. The loss was heavy but was covered by insurance.

A fire caused by spontaneous combustion consumed the greenhouse of Isaiah Gauley, 17 Spring street, Brighton, Mass., on June 14. The loss is placed at \$2000.

THEORIES AND FACTS IN PLANT BREEDING.

Editor HORTICULTURE:—I seem to be sharply arraigned in the issue of HORTICULTURE of May 26th, by Anne Dorrance, for the statements made in the article by me published April 21st. That article she says contains many statements which are very loose and very inaccurate. Not only this, but the article summarizes two laws in a manner "both absurd and incorrect." She admits that the Galton law is somewhat as crudely stated by me, so that disposes of the charge of inaccuracy so far as the Galton law is concerned. She also says, "In 1901 in its journal, The Royal Horticultural Society of England published a translation of Mendel's own paper describing his experiments. This was made by Prof. W. Bateson of Cambridge University and is, so far as I know, the first publication of this paper in English. Nowhere in this or in subsequent papers could any statements be found which would lead to such a change of breed in poultry as Mr. White describes, nor could Mendel find in this description any trace of his theory. Mr. White in his version of Mendel's law supposes the purity of parents, hence the purity of germ cells. Does it take a law deduced by hard labor, both mental and physical, as Mendel's law was, to predict that if two pure individuals be bred together their offspring will be pure? How could it be otherwise? Such a statement is adding insult to injury."

"The conception of the purity of parents is not only untenable but unthinkable, unless we throw away our basal theory of evolution and accept that of special creation." As to the above question, "How could it be otherwise?" I will ask, does she not understand that I was dealing with hybrids, and does she not know that if two individuals of two pure species are bred together that the offspring will be a hybrid, a combination of the two, a blend, and not pure? As to the insult, I will say that according to the code no insult is given where none is intended, and as to the injury I hope it is not serious. What is usually understood as pure bloods, are such plants and animals as reproduce themselves.

She says that the conception of purity of parents is not only untenable but unthinkable. Now Hugo de Vries has created a new species that is pure and the fact is not only tenable and thinkable but is a reality.

As my critic has quoted Bateson I will quote from his paper read at the International Plant Breeders' Conference held in New York in 1902. He says, "If a pea with green cotyledons be crossed with one having yellow cotyledons a hybrid is produced. That hybrid grows up and bears peas in its turn. Those peas will be composed each individual pea, of a union of two germs, each germ being a carrier of either one or the other of the pure parental characters, therefore we may have two green germs uniting, or two yellow germs uniting, or a yellow germ uniting with a green."

In another case he speaks of using pure parental forms, and no one felt injured or insulted. Again I quote from a paper read before the American Breeders' Association, Feb. 1-3, 1905,

with the Cupid sweet pea and I think by Dr. H. J. Webber, in charge of plant breeding laboratory, U. S. Department of Agriculture, subject, Mendel's law, "What would happen if the hybrids were bred with its own pollen, or if in the case of an animal it were with another exactly similar hybrid?" Suppose, for the purpose of illustration, a hybrid of a fuzzy-seeded with a black-seeded cotton be fertilized with its own pollen. Let us consider that a given number of egg cells, 100 for instance, incidentally fertilized with 100 pollen grains of the same hybrid. There are two kinds of egg cells produced, some with the potentialities of the fuzzy seed and some with the potentialities of the black seed, and the same is true of the pollen grains, taking the egg cells and pollen grains without selection, therefore, we would expect to have of the egg cells, 50 with fuzzy-seed potentialities and 50 with black-seed potentialities.

If these are now brought together, letting the law of chance govern the union the probability is that we would have 25 fuzzy uniting with 25 fuzzy, 25 fuzzy uniting with 25 black, 25 black uniting with 25 fuzzy and 25 black uniting with 25 black. Using f. to represent fuzzy-seed potentialities, b. to represent black-seeded potentialities, we would have the following formula which will explain the probable unions graphically:

$25f. + 25f. = 25ff.$
(These do not contain potentialities of b. and will produce true.)

$25f. + 25b. = 25fb.$
 $25b. + 25f. = 25bf.$
(These are hybrids, so far as this character pair is concerned exactly the same as in the first generative containing potentialities of both f. and b.)

$25b. + 25b. = 25bb.$
(These do not contain the potentialities of f. and will reproduce true.)

This ought to satisfy my critic that poultry may be bred in accordance with Mendel's law. She says "let Mr. White examine a little into the intricacies of these cells which he so glibly plans to read." I made no plan glibly or otherwise; I simply stated the limit of our knowledge in that direction. She winds up her onslaught by calling my closing statement a marvellous finale. Well it was a marvel to King John how the devil the apple came inside the dumpling. Now I stated early in my article that there are two classes of plant breeders, one seeks purity and fixity of strains, the other seeks to produce new and improved forms by combining many species and varieties which adds to the complexity of characters of many plants, such as grapes, apples, pears, etc. These plants never reproduce themselves, and cannot in any sense be considered pure except as species.

Of course where there is such a complexity of characters Mendel's law is of less value, but it is not the fault of the law. This is why no two are alike in many thousands of seedling grape-vines, no marvel when viewed with an honest purpose. Miss Dorrance seems to abhor the idea of pure parentage. Well, there are still some people who believe that the world is flat and that the sun revolves around it. Her authority, Bateson, often uses the term, pure organism, parentage. "He says I have been experimenting

"NONE BETTER"

the possibility attaches itself at once that it is a pure form." I know of a peach that is growing in the vicinity of Boston and has been for over fifty years, that reproduces itself every time. Bateson says that when similar germs meet they produce a pure bred organism which in my terminology is called a homozygote—a yoking together of like germs. When the germs are dissimilar they make a new form, a hybrid form, which in this terminology we may call a heterozygote—the yoking together of two dissimilar germs in the zygote form. Miss Dorrance protests against my calling Mendel's law a boon. Now if I show her that Prof. Bateson has put it stronger than I did will she come down from her high horse? Prof. W. W. Spillman while discussing Mendel's law said "I agree with a statement of Prof. Bateson already published in which he states that he regards Mendel's discovery as of equal importance with the formation of the atomic theory in chemistry."

A word more about the poultry question. Prof. Bateson in describing the Andalusian fowl and applying Mendel's law to their breeding confirms all that I said upon that matter.

Miss Dorrance takes exceptions to my closing statement. I can hardly believe that she doubts my statement in regard to perpetuating varieties pure by budding and grafting, as proof of that I will refer to our old varieties of apples, the Baldwin, R. I. Greening, Roxbury Russet, etc., they are as pure today as when first introduced. Of course there has been cases where the stock has influenced the scion, perhaps one case in 10,000, but that is too rare to quibble about. I once produced a hybrid by grafting the Seckel on the Pope Pius. The ninth year it was a complete blend of the two varieties. But such exceptional cases don't destroy the rule. The above facts will place Miss Anne in a dilemma, she will not want to admit that I am right, neither will she be willing to say that Prof. Bateson is wrong.

N. B. WHITE.

NEWPORT PLANT TRADE.

The season for the sale of bedding plants is about closed and every grower and dealer admits that it was the most profitable in a number of years. The prices obtained were about the same as in recent years, but the demand early in the season was much brisker than was anticipated and it seems the purchases of large lots were

John Waterer & Sons, Ld. AMERICAN NURSERY BAGSHOT, ENGLAND

have the finest stock of recognized Hardy Rhododendrons, Azaleas, Andromedas, high class Evergreens and specimen Conifers. Ask for special list of plants grown for the American trade.

John Waterer & Sons are the great exhibitors of Rhododendrons in London.

far more numerous this year, thereby adding considerably to the net profits because of less expense in handling and delivery. Great numbers of begonias were sold and several growers had difficulty in filling orders. What helped the demand for large lots of bedding plants this spring more than anything else perhaps was the decision of many cottagers who were absent last season to open up this year and spend the summer in Newport. That decision will also help the florists later on because many of those we have referred to are among the most liberal dispensers of hospitality within the bounds of society, and no society function is worthy the name without floral decorations in keeping with the status of the host and hostess.

NEWS NOTES.

John J. Perkins & Son will remove about July 1 from 115 W. 30th street to 50 W. 28th street, N. Y.

C. L. Marshall of Lowell, Mass., claims \$3,000 damage from the city on account of a sewer which has caused his wells to dry up and thereby entailed large expense for carrying water to his greenhouses, etc. The case is under advisement.

Wm. Elliott & Sons' annual auction trade sale at 201 Fulton street, New York, takes place on Tuesday, June 26. Mr. Elliott says the stock will be the most desirable he has ever had to offer at this season and expects an old-fashioned reunion of the trade buyers from far and near.

SEED TRADE.

Within the past ten days abundant rains have fallen in Michigan, so abundant, in fact, as to be a source of great anxiety to farmers and seed growers. "One extreme follows another" has proved true in this case at least, as reports from the "Thumb," where from 20,000 to 40,000 bushels of peas and beans are planted, indicate that it is or has been under water to a considerable extent. Conditions are quite similar to those of last year at about this time, and which resulted in reducing the crop fully 50 per cent. Keep your eye on the "Thumb." Corn is not doing well as weather on the whole has been too cool and dry. As yet there are no reports of serious damage to general seed crops excepting the annual scare from California, which hardly awakens interest these days.

Those desiring rooms at the Boody House, the official headquarters during the coming convention of the American Seed Trade Association, should apply at once, as this hostelry is of somewhat limited capacity. Toledo needs a new hotel.

Those who like to travel by water, and are going to the coming convention at Toledo, can have this pleasure. Eastern seedsmen can go by rail to Buffalo and thence by steamer to Detroit, whence they can go by steam or electric railroad to Toledo in about two hours. The steamers leave Buffalo about 5.30 p. m. daily, arriving at Detroit next morning. They are large and magnificent boats, and the trip is a delightful one.

LIST OF PATENTS.

PHILADELPHIA NOTES.

Jno. Burton is serving on the United States jury, which is at present holding sittings in the federal building.

Wm. J. Muth of the Cut Flower Co. reports that his firm is moving their office down to the main floor. Cold storage facilities have been improved by utilizing waste space to the rear.

Among the cargoes on the Marquette and Abyssinia were large consignments of cycas leaves, moss wreaths, raffia, cork bark and other supplies for H. Bayersdorfer & Co. Mr. Bayersdorfer is at present in Europe and reports that he will send on following steamers a fine lot of novelties for the Dayton convention, as well as staples for the fall trade.

There is talk of a popular reception being tendered to Mr. Hugh Dickson of Belfast by the Florists' Club. The man to whom we owe Liberty, Killarney and dozens of other fine roses certainly deserves all the public recognition we can give him.

The Waretown Rod and Gun Club, which is composed mostly of Philadelphia florists, with Jno. Westcott at the head, held its annual opening on the 15th, 16th and 17th inst. The first day the company were guests of Commodore Westcott, who is well known as a good entertainer, and was as usual indefatigable in looking after the comfort of everybody. A pleasing incident of the proceedings was the presentation to the host of a silver-mounted oak loving cup. After the dinner, to which a large company sat down, speeches were in order, all of them full of good humor and jollity, and the time flew by on lightning wings. To quote Thomson:

"One well-spent hour
In such a tender circumstance for friends
Is better than an age of common time."

Among those who distinguished themselves one way or another were: Richard Lynex, aged 84, and still hale and hearty; Robert Craig, W. B. Westcott, C. H. Eimerman, Jno. H. Dun-

ham, George Redford, S. S. Pennock, Alfred Hoegerle, David Rust, W. H. Westcott, W. K. Harris, Francis Borelli, A. Y. Hanna, Robert Kift, J. W. Colfesh, G. C. Watson and Tillie the cook. We hear there was some fishing but saw none of it, and all the shooting that came under our observation was immaterial—the only damage being a few tin cans well battered and Watson's magazine shot full of holes.

G. C. W.

On the night of June 11 heavy frost damaged much vegetation throughout northern New York state. The ground was slightly frozen in some places. June 12 was the coldest June morning in many years.

CUT FLOWERS

The Breitmeyer Flower Store

See Frontispiece.

Detroit may well claim the credit of having the finest flower store on this continent. John Breitmeyer & Sons have set the pace that will mark a new departure in the building, equipment and appointments of flower stores. The establishment, illustrated in our frontispiece and on this page, is in the Breitmeyer Building, an office structure, on the ground floor of which the store is located.

The first impression upon entering the place is that of elegance, grandeur and good taste. The main room, 50x70, is designed after and carried out in the style of the Italian renaissance. The lofty ceiling, supported by four immense columns of Verde antique marble, represents a sky of the richest blue, such as one may see only in sunny Italy. The floor is of pure white Italian mosaic, fan-like in design, with a key border in black. Broad marble shelves at a height of four feet and resting upon marble wainscoting, surround the entire room. Immediately above these and extending up to the ceiling are heavy French mirror plates, each imbedded in a sort of Verde antique gold frame. The general effect is heightened by the four capitals of the columns, supporting the ceiling, being finished in Roman gold.

The east end of the room is taken up by the "ice chest"—a large marble and plate-glass room, brilliantly illuminated by the touch of a button. The ice is invisible and the room is perfectly ventilated. There are marble shelves and table, also an invisible sink used for the emptying and filling of vases—a unique convenience.

Several bronze urns, especially designed, scattered here and there through the room lend a charming effect. A balcony above and covering

the entire width of the marble and plate-glass room (ice chest) provides spacious quarters, ample light and all the comforts necessary for a good-sized orchestra. The office is located on the north side. Here also every minutest detail to insure comfort and system have been carried out to the fullest extent.

Especial ingenuity is shown throughout in the blending of the useful with the ornamental. A brilliant light is shed from an antique bronze and crystal chandelier of great beauty, and massive antique bronze torches fastened here and there to the walls throughout the room.

The show windows, facing two streets, while in nowise copied from an "Italian palace," possess nevertheless some attractive features calculated to soften in a degree the matter-of-fact commercialism of the average display window. Here plants are not stored merely, but are displayed so that the decorative feature is predominant. A beautiful Carrara marble fountain at the southwest corner of the main window lends additional charm.

The furniture well harmonizes with the general surroundings. Three Verde antique tables, one 5x10 and two circular ones, each 4 feet in diameter, are works of art, sculptured at Florence under the supervision of Ninchelini. Numerous marble benches are scattered through the room.

In the work, storage and stock rooms—all located in the "nether" region—every imaginable comfort and convenience have been well studied out and provided for.

Wm. Wright & Co., the Detroit decorators and designers, executed the contract.

S. S. SKIDELSKY.

Cut Flower Market Reports

Business is very flat in the **BOSTON** wholesale establishments although the retail dealers are fairly busy with school work and wedding occasions. So much out-door material is used that the wholesale market, overstocked as it is, gets but little benefit from the business. Roses are away down as to quality. Brides and Bridesmaids, the last of the season's crop, are covered with mildew and useless to any critical buyer. Beauty is selling fairly well. Liberty and Jacq. are also enjoying a good sale. Carnation are in very bad shape. The supply is larger than at any time during the entire season and there is no call whatever for them. Peonies had their career cut short by the spell of cold rainy weather and are now practically down and out. Sweet peas are in heavy over supply. The lily of the valley supply is much too large for the needs of the market.

It may be said that the **BUFFALO** past week has been a busy one for all, and will continue for the balance of the month. Stock of all kind has been plentiful, in fact too plentiful to hold the prices firm. Carnations have diminished in size and some varieties are no larger than out-door pinks, Lawson being the leader in quality, together with Flora Hill. Enchantress, Marquis and other varieties are pretty much on the sleep list, but Red Lawson is holding well and is the leader in red. An over-supply of all kinds was had the past week up to Friday, when a good quantity was in waiting for the cemetery florists, but again cloudy weather and rain checked moving. Roses were also plentiful, especially the ordinary, selects selling well at good prices. Peonies selling well under normal supply. Lily of the valley, peas and other flowers are of fine quality and demand good.

The market for the past **CHICAGO** two weeks has been entirely in the hands of the retailers to get stock at their own will and price, but the tables turned Saturday, and the wholesalers regained the lead and brought the retailers to a halt, prices having increased a few notches. This week bids fair to be a busy one, as the last of the commencement exercises will be held. While stock in general is not at its best, some good carnations and roses are to be found, sweet pea stock is shortening a little, and the peonies are holding forth in full blast, all hands on deck, the long and the short, the large and small, and all bringing good prices. The Beauties are causing a world of trouble; not a first-class bloom to be had from anyone. The retailers have been forced to substitute Richmond and Liberty roses. A few Beauties are to be seen here and there, but the flowers look like colored peanuts on Beauty stems, and the price for them is almost doubled. Green goods are in a normal condition and bringing the usual price.

CUT FLOWER MARKET REPORTS.

(Continued from page 799)

Trade keeps right
COLUMBUS along good. There have been an unusual

number of large weddings, and this, together with school closings and commencements, etc., has kept things lively. Stock of all kinds is ample; roses are beginning to get small and poor. Carnations are still of very good quality, but in enormous supply. Peonies are about gone, and they have had a better run than ever before. We understand that many of the growers will plant very largely with the better varieties this fall; there certainly is an unsatisfied market here for them. Green goods are coming better than for some time. The seedsmen are still quite busy with the end of the bedding plant season, and what seasonable seeds are now in demand. Everyone in the craft is happy as the season about to end has been most prosperous for all.

The demand is brisk

CINCINNATI and business continues fairly good,

but the supply of cut flowers has suddenly let up until it is next to impossible to get enough stock to do business with. What little there is shows a slight improvement in quality, due to the cool weather. In consequence prices have advanced somewhat on everything that is saleable. Lilies are about played out and will be scarce for several weeks. The only thing you can make sure of getting is roses, carnations and lily of the valley. We have been favored with frequent rains this spring, and the out-door supply of summer flowers gives promise of a good crop.

The conditions of

LOUISVILLE business the previous week averaged

fair. Carnations and roses have been satisfactory in quality and demand. Lilies and sweet peas are abundant and move readily. There is little call for lily of the valley. Other stock is in good supply and finds a steady demand.

Business is rapidly

NEW YORK whittling down to summer desuetude. Most

of the stock coming in is very poor and the beginning of the end of the heavy avalanche is in sight. Receipts are falling off rapidly. Peonies are about finished. Prices rule low on everything except a few lines of very fancy grade material.

There was some

PHILADELPHIA improvement in the volume of

business the past week and present conditions are as good as can be expected. The congested condition of the carnation market was greatly abated. Beauties and Libertys were in good demand, but only fair as to quality. Lily of the valley was in good demand and on the scarce side. Plenty of cattleyas, demand liberal and steady. Sweet peas fair as to quality and find ready sale. Cold storage peony supply is good for some weeks yet. Lilies, white iris, lupins, swainsona and cornflowers are plentiful. Greens in good supply and steady.

WANTS, FOR SALE, ETC.

Advertisements in this column one cent a word. Initials count as words. Cash with order.

GOOD OPPORTUNITY

ENERGETIC YOUNG, MAN with thorough Ornamental Nursery training, including hardy herbaceous plants, may find it to his advantage to correspond with us. Permanent position to right party. State experience, references and salary expected. Position now open.

"Built the Premier Way"

Greenhouse Reasons

"To be profitable they should be practical — to impart a nice appearance to your residence they should be artistic — while as you sometimes want to move them they should be portable.

"You will find all these points — and a lot more in Premier Houses. There is sense all the way through. There is experience behind us — that's a reason. Get booklet No. 48.

Chas. H. Manley

Premier Works, St. Johns, Mich.

The Standard Steam Trap

Certificate of merit awarded at Washington, D. C., Florists' Convention. For simplicity, durability and perfect satisfaction it has them all guessing. It is in a class by itself. To see it work a large plant as well as a small will convince the most sceptical that it is the Florists' Friend.

The Standard Ventilating Machine still leads as the most durable, easiest working and the all-around satisfactory machine.

The Duplex Gutter is gaining all the time, over 12,000 feet sold thus far this season. Catalogues free.

WE ARE HEAD-
QUARTERS FOR

PRINCESS VIOLET STOCK

The **Princess of Wales** is still the leader of all single violets. There is no other variety on the market that can compare with it as a commercial violet because it blooms from Sept. 15th to May 1st; every bloom is marketable. It has size, it has color, it has length of stem. It has fragrance. It sells when any other variety, single or double, can not be given away. The people want it.

So great is my confidence in this violet that the following Autumn I will devote 80,000 feet of glass to the growing of this variety.

I have about 200,000 nice young divisions now ready to ship at the following prices:

\$2.00 per 100

\$15.00 per 1000

500 at 1000 Rates

Lots of 5000 at \$14.00 per 1000

Lots of 10,000 \$13.00 per 1000

HYDRANGEAS

We have a magnificent lot of Otaksa, nice plants coming into bud and bloom, which will be in perfection during July and August, when they are in great demand at watering places and other summer resorts. There is nothing showier or more satisfactory for lawn decoration. We make a specialty of these, and find an increasing demand for them from year to year. They can be shipped anywhere safely by freight.

Large plants in tubs, \$2.00 and \$3.00 each; very large specimens in half-barrels, \$5.00 and \$7.00 each.

F. R. PIERSON CO., Tarrytown-on-Hudson, New York

In writing to Advertisers kindly mention Horticulture

Chionanthus virginicus

THE WHITE FRINGE

This is a native shrub of great beauty and one that should be planted wherever it is found to be hardy. As will be seen from the accompanying illustration, the flowers are borne on loose panicles, from lateral buds at the end of the previous season's growth. The petals of the flowers are divided almost to the base and thus have popular name of white fringe. It usually flowers during the months of May and June and the flowers have a pleasing fragrance. The leaves are dark green and when even not in flower it is quite an attractive shrub; it is of rather slow growth but thrives in any good garden soil.

Two Injurious Grape Insects

GARTERED PLUME MOTH

Several times this season I have had my attention called to the work of the gartered plume moth (*Oxyptilus periscelidactylus*), which has done considerable damage to the grape foliage. The caterpillars are nearly all pupating now (June 16) and as there is but one brood a year no further damage need be feared this year, but there is danger of a repetition another season.

The larvæ hatch when the early foliage appears and are greenish white caterpillars, one-half inch long when

mature, covered with tufts of white hairs which give them a furry appearance. The head is yellowish green with a band of black across the front.

On hatching each one folds a leaf over or fastens two or three together with silken threads. Inside this protected place the caterpillar feeds, skeletonizing the leaf. When through feeding—about the middle of June—the larva spins a few silk threads and fastens his hind feet in them. Then he sheds his coat and becomes the curious green pupa, one-half inch long, with two projecting shields in front, the whole resembling a monk dressed in a long green cloak. Later the color turns brown.

These pupæ give rise in about eight days to a yellowish brown moth marked with streaks, lines, and spots of white and having a metallic lustre. The fore-wings are cleft about one-half their length. The hind ones are each divided into three parts, but instead of having the ordinary wing texture they are feathery-like plumes, from which the moth derives the name, "plume moth." The wing expanse is about seven-tenths of an inch. The hind legs are furnished with two pairs of long spurs or spines arising from clusters of brown scales, which give the moth the "gartered" appearance. These moths lay the eggs for the next brood.

Where the vines are sprayed early with a stomach poison no trouble need be feared, but if no spraying is done and they appear in large numbers they will be too well protected for a poison to reach them and crushing or picking infested leaves must be resorted to, care being taken that the lively caterpillar doesn't slip out and escape.

EIGHT-SPOTTED FORESTER

Another insect that is doing a lot of damage is the eight-spotted forester (*Alypia octomaculata*). It is a conspicuous insect easily identified by the spots from which it takes its name. The Boston ivy and Virginia creeper suffer severely every year from this insect and in fact it attacks many ornamental shrubs and trees, being common over the greater part of the United States and Canada, especially in town or city gardens.

The moth is five-eighths inch long with a wing expanse of about one and one-fourth inches. Its prevailing color is brilliant blue black. Each forewing is marked with two large, more or less oval, pale yellow spots, and each hind wing is also marked with two spots but they are more nearly round and are white in color. The shoulder covers are yellow and a yellow band encircles the head. The legs are partly clothed with orange hairs. There are two broods a year, the moths flying in May and August and the caterpillars appearing soon afterwards.

The eggs give rise to pale bluish caterpillars very prettily marked with orange and black. Each segment has eight black stripes and an orange band covered with black conical spots, the orange being bounded by the two middle black lines. They are about an inch and a half long when mature. After they are done feeding they bore into rotten wood, or burrow into the ground and form a cell of earth. Here they pupate coming forth as moths in a few days.

When they are troublesome spraying will check them, using arsenate of lead five pounds to one hundred gallons of water, bollworm one ounce to two gallons or Paris green one teaspoonful to two gallons of water.

R. J. Adams

Cool Orchids

See Frontispiece.

High up on the Andes in Colombia, just below the frost line, forming a belt that does not descend lower than 6,000 feet elevation is a tract of territory which has become the most diligently searched of any in South America because of its floral wealth, and the ever increasing demand for the orchid gems that are found there. It was at one time possible for a collector to obtain with comparative ease all the plants that could be taken down the river on the small steamers that ply there, but of recent years the increasing demand and the destruction of their native forests for the purpose of coffee culture has made it difficult to obtain these fine plants. In spite of the many days' journey on mule back necessary now to reach the present "districts" where the plants still remain, collectors are still at work gathering up all they can for export, principally to London, where they bring high prices even as dried scraps that might be easily put in a vest pocket. The species most sought for is *Odontoglossum crispum*, and for this there are several reasons; a graceful arching spray of this orchid is perhaps the most beautiful flower created; certain it is that hundreds of cultivators think so. Then again there were never two plants imported that proved alike when they flowered; if one buys 1,000 he is sure of just that many distinct varieties. Some are, of course, inferior, but the gems that crop up among them are priceless. One amateur cultivator in England has a small house that contains \$50,000 worth of these rare forms of *odontoglossum*. The length of time the flowers last in perfection, varying from a month to six weeks according to the weather, is a point worthy of remark, and, if it is stated that very little artificial heat suffices, even less than a carnation needs, to grow them to perfection it is not strange that of recent years the *odontoglossum* has come to the front rapidly as the most popular orchid for the grower who takes an interest, a personal one, in the plants he cultivates, for the atmosphere of the house is always kept congenial. The temperature in hot weather even in the United States can be so regulated on the hottest days that it is at least 20 degrees lower than in the shade outdoors. This is vastly different from the steaming hot interior of orchid houses that accommodate the plants from the East Indies, Philippines, Brazil and other parts of tropical America.

For many years *Odontoglossum crispum* was known among cultivators as *O. Alexandræ*. Its first flowering in England was coincident with the arrival there of the beautiful princess, the present Queen, the variety so named being considered different from the dried botanical specimen previously named *O. crispum*; later, however, the wonderful variation in individuals was apparent, and the older name adopted, but it has taken a generation to live down this trifling error, though sentiment has perhaps been largely responsible for this tenacity. There have been very few collections of cool orchids brought together in this country, largely because growers were afraid of the hot weather in summer, but there have been striking exceptions, for instance, the well-known Ames collection at North Easton, Mass., and that of the late Mr. Corning at Albany, N. Y. This last when dispersed was in fine health, many of the plants being large specimens of wonderful vigor. It was thus seen that with proper care and a suitable house to summer them in, there are no difficulties that could not be overcome, and

many smaller attempts have followed usually with good results.

The beginner, however, soon finds that all of the literature bearing on this subject applies to the conditions that obtain in England and his success depends on the ease with which he can apply the two great factors that make for success, plenty of air and a moderate temperature, and ignore the mass of useless detail, the slavish imitation of which for about ten years nearly killed the whole of our plants, but under a more rational system, during the past few years the plants have in many instances trebled in size and we know there is no secret about it.

Odontoglossums when received from their native woods are devoid of leaves; they are a cluster of bulbs just as torn off the trees; these take about two years to bring them to the flowering stage, but the buds are all taken off except one that the effort may not be too much for the newly established plants. One bloom is enough to prove the variety for the grower will find that after two years of waiting he is quite anxious to see how many prizes there are among his lottery. We are proving quite a number in this way this season, and while the pleasure is sometimes largely in the anticipation, this particular importation seems to have been gathered in what is known as a "good district." for there are selections where none but inferior forms are found, but no one can distinguish between them until they bloom. The structure used to summer the plants is constructed on the north side of the building the roof sloping down to within 16 inches of the ground there being just height enough to admit of three ventilators such as are used for cellar windows; these allow of a current of air through under the plants in hot weather. Roller shades are used on the roof elevated well above the glass to allow of a free current of air between and also that the warm air may escape through the top ventilators.

Odontoglossums may be had in flower during the whole year, but the most of them are to be had from April through June. The plants take a rest through the summer and begin to grow again in fall. The whole of them are then taken up out of their summer quarters and placed in a light airy structure for the winter where they receive all the sunshine possible for the midwinter months to enable a vigorous growth and strong flower shoots to be formed. At the end of March all are again put into the "cool house" for summer. The popular taste at present favors the spotted varieties; the heavier the spots or blotches are, the greater the prize. The beautiful pearl pink varieties were once the most sought after until they became common, but these are still the most beautiful and the airy grace of their arching sprays is such that they lend themselves kindly to all forms of decoration, can be enjoyed long in perfection, and in only one respect do they fall short, that they are not fragrant; this should not be considered a fault, however, for very fragrant flowers are almost always short lived. There are exceptions of course but in a general way the theory holds pretty well. Cool orchids insist on a cool pure air at all times, but the only real difficulty experienced in their culture is during the dog day weather when the atmosphere becomes stagnated in the partly underground house, with the temperature high also. We find this can easily be obviated by the use of a spray or jet of cold water directed through the center walk with good pressure behind it; this keeps the air circulated and the foliage of the plants gently moving, the amount of water used being trifling compared with the good accomplished, as

it is only needed on hottest days and in this way the difference between the temperature in the cool house is often 25 degrees less than outside.

The roller shades are made to roll from the bottom up so that at midday only half of the structure needs shading, the building screening the upper part, and light is not obstructed wholly except in early morning as the house runs east and west.

British Horticulture

HONORING HORTICULTURISTS

A fund is being raised for the purpose of raising a memorial to the late F. W. Burbidge, M. A., curator of the Trinity College Botanic Gardens, Dublin. It is proposed that this should take the form of a Memorial Library, for the use of the members of the Irish Gardeners' Association, over which the late Mr. Burbidge so successfully presided. Another project which is receiving the support of leading horticulturists is the proposal to raise a memorial to the late Rev. H. Honeywood D'Ombraim, founder of the National Rose Society, and from 1876 to 1902 its senior Honorary Secretary. Mr. Edward Mawley is acting as Honorary Secretary and Mr. H. E. Molyneux Honorary Treasurer to the fund. The National Rose Society was founded in 1876 at a meeting of rosarians over which the late Dean Hole rendered such a lasting service to the "Queen of flowers" by his Book about Roses which has been issued in various editions and translated into several foreign languages. For over half a century the late Mr. D'Ombraim was a regular contributor to horticultural literature. It is proposed by the committee that the memorial shall take the form of a trophy to be known as the D'Ombraim memorial cup which will be competed for at the shows of the National Rose Society.

AN INTERNATIONAL CONFERENCE

In recent years very successful international conferences on plant breeding have been held. In 1899 one took place in London under the auspices of the Royal Horticultural Society, and a second in New York, arranged by the Horticultural Society of New York, in 1902. A third has now been fixed to take place in London, commencing on July 30 and concluding on Aug. 3. The Royal Horticultural Society, who are making the arrangements, have issued a large number of invitations to hybridizing specialists in various parts of the world, and already many acceptances have been received from the United States, Canada, France, Belgium, Australia, etc. The proceedings, according to present arrangements, will open with a *conversazione* on July 30th in the Royal Horticultural Hall at Westminster, where an address of welcome will be delivered by Sir Trevor Lawrence, Bart., the President of the Royal Horticultural Society. The conference opens on the following morning with an address from Mr. W. Bateson, F. R. S., president of the conference. In the evening the visitors will be the guests of the Horticultural Club at the Hotel Windsor. On Aug. 1st the visitors will be entertained at Burford, near Box Hill, Donking, the residence of Sir Trevor Lawrence. Here they will be able to inspect the president's very valu-

able collection of orchids, one of the finest in the country. The arrangements on the concluding day include visits to the Natural History Museum, the gardens at Gunnersburg, Acton, the residence of Mr. Leopold de Rothschild. Every effort is being made by the council of the Royal Horticultural Society to make the visit of the foreign savants a pleasant and memorable one.

THE WINTER FLOWERING CARNATION SOCIETY

One of the incidents of the Temple flower show week was the inaugural dinner and meeting of the Winter Flowering Carnation Society. This new organization, which has been launched under very favorable conditions, owes its inception to Mr. Hayward Mathias, who is an enthusiastic believer in the merits of this increasingly popular flower. The meeting presided over by J. S. Brunton of the Horticultural Trades Journal, was attended by some of the leading growers in England and the Channel Islands. The rules which were discussed and passed, state that the object of the society are the extension of the culture and the improvement of the winter flowering carnation. At the outset there was some difference of opinion as to the choice of a title, several of the members desiring to include the words "perpetual flowering" as being a more suitable description. In giving the history of the society's formation, Mr. Mathias emphasized the fact that it had been started in no antagonism to the National Carnation Society. The latter society would continue to work in the interest of the summer section, and as the shows would be held at different times of the year the two organizations would not clash in any way. To show the friendly attitude assumed by Mr. Mathias it may be mentioned that prior to taking steps to inaugurate the new society he approached the committee of the older association, but they declined to undertake the additional responsibility of holding a winter show. There should be plenty of scope for both societies to work in the interests of carnation growers.

The society will be open to trade growers and amateurs, and the minimum annual subscriptions will be 5s. A floral committee of experts is to be appointed who will award certificates to meritorious and truly winter flowering varieties. One or more exhibitions will be held annually, the chief show being fixed for December. The committee are to discuss whether the shows should take place at the Royal Horticultural Hall or at the Royal Botanic Society's gardens. A suggestion was made that classes should be arranged for bouquets and table decorations in order to show the usefulness of the carnation for this purpose. One member was very anxious that the American plan of holding a "Carnation Day" should be followed in Britain, and there is no doubt that this idea will receive the full consideration of the committee, the majority of whom as trade growers are anxious to see the flower attain to still greater popularity. Mr. Brunton was elected chairman, Mr. S. Mortimer, vice-chairman, and Mr. Hayward Mathias honorable secretary and treasurer. There is every prospect that the society will protect the interests of the trade growers, besides extending the popularity of the carnation among the public. There is no better means of achieving the latter object than by holding a show on the lines suggested at the meeting.

WM. J. STEWART, Editor and Manager.

operations for the coming year. See to it that there is no idle space and that unprofitable methods, if such exist, are abandoned.

The store window
in summer

We should like to suggest to the florist who has been in the habit of slighting his show window or conservatory during the dull

weeks of summer that he try the experiment of maintaining a neat, attractive, but not necessarily expensive, display all through the slack period. One clean, healthy plant, one vase or dish of fresh flowers of any kind, if the surroundings are tidy, is infinitely better than a window full of old trumpery that will not be needed until next season. "It doesn't pay" is a very bad maxim when applied to cleaning up. An always dainty flower window and orderly office cannot fail to attract the attention of the people who make desirable patrons and its owner will not be forgotten when the busy times return. An insistence upon these principles will also serve to keep the help from lapsing into that listless languor which is seen to prevail in so many places during the summer season and which, when it once gets a good hold, is so hard to shake off, even when a windfall comes in the shape of an order.

About
formal gardening

Some very good and instructive speeches were made at the sessions of the park superintendents in Washington recently but they contained not one word in approval of the formal gardening fad. Instead the key note of everything that was said was the doctrine of fellowship with nature as the best motive in all park work. As a rule the less of artificiality displayed the more satisfying the pleasure to be drawn from a garden or park. A knowledge of trees and shrubs and their proper adaptation is one of the fundamentals in park construction. Compare the work of the man actuated by a refined appreciation and loving regard for these products of nature's handiwork with the strained mechanical effect produced by the most skilful builders of "Italian" gardens. We are sorry for him who sees more to admire in the latter. Much is made of the argument that a certain amount of formal treatment is required to harmonize and "break" the severity of architectural structures into the informal surroundings of rural scenery. In a measure this may be reasonable but it furnishes a very insufficient excuse for the aggregations of clipped deformities on which so many wealthy people, merely because it is a fad, are squandering their money. We shall be very much surprised if a reaction does not soon set in and circumstances make it discreet for the high priests of this unnatural school to turn back and learn the first principles of true gardening art.

The close of a
profitable year

With this issue HORTICULTURE closes its third volume. The many appreciative words, oral and written, which we have received, especially of late, from readers and advertisers are most encouraging and give pleasant assurance that HORTICULTURE is filling an acceptable and useful place in the uplifting and advancement of the noble profession whose interests it seeks to serve. The end of June brings also to most of our readers the practical closing of a volume—the ending of one season, and the midsummer respite which precedes the opening of another. From the observations which we have been privileged to make we believe that the season just closing may be recorded as a good and profitable one and in no department of horticultural industry is there reasonable cause for complaint as to results. We hope the next may be equally profitable for all.

Planning for
next season

It does not always follow that mere volume of business is a reliable gauge as to profit or loss. The men who come out at the end of the season with the biggest profit are the careful managers—those who think ahead and work on a well-matured plan. With the grower under glass no qualification counts for more than that of wise foresight so that every square foot of greenhouse space is kept at work 365 days in the year. Probably every one of our readers can call to mind instances where there is enough idle room in a greenhouse to pay, if properly handled, a good interest on the investment. Glass is different from the proprietor and his help in that it requires no vacation. Now, when one has time and opportunity to survey the past and tabulate its results, is the time to map out the

WHOLESOME CHESTNUTS.

Crotons need sunlight to bring out brilliant coloring, and so do dracaenas but the latter require more care and discrimination; bringing them into bright sunlight suddenly will burn the foliage.

Primulas and cinerarias, from the time the seed is sown until they are through flowering, need incessant care, careful watering, careful potting, and careful handling, and only when using good judgment and care in every particular will satisfactory results be obtained.

It is already time to think out the problem of what pays best for Christmas. Don't keep a lot of useless stuff around; push ahead the things most likely to be in general demand. In the case of a novelty say but little about it until pretty certain that it will amount to something; then will be the time to push it. Only by the widest publicity through the medium of the horticultural press after all, can any great number of interested persons be informed when you have stock enough raised to make something out of it. Last Christmas medium-sized plants were more in demand throughout the country than ever before. Lorraine Legonias were prime favorites; that is worth keeping in mind. There is a new *Nephrolepis* recently introduced that will be just the thing to satisfy customers in search of Christmas plants of pleasing form but of sombre hue. It will sell well in 5 in. or 6 in. pans and there is time enough to get them into those sizes before the holidays.

The fall of the year is the best time to plant peonies therefore select the varieties wanted and order early so as to get strong plants.

Now that some houses are empty or nearly so it is a convenient time to give the inside a thorough cleaning and one or more coats of good white paint.

Keep the hoe going among carnation plants; at the same time keep in mind the difference between hoeing and digging; too deep hoeing is apt to work injury while light hoeing is very beneficial, and the knack of doing it is easily acquired with practice.

Remember the flower show. Thou shalt go there, thou and thy man servant and thy maid servant, and thou shalt give them tickets of admission or the wherewithal to purchase the same. When in the exhibition hall if thou seest aught that pleases thee not, keep it to thyself, for thy neighbor hath feelings which thou shouldst not hurt, otherwise he may overhear thee and be angered and what wilt thou have for thy outspokenness? Remember that thou shouldst have no work done in the garden or in the greenhouse on the Sabbath Day except what is absolutely necessary thou, as well as all within thy gates, needst rest on the Sabbath day.

In the heat of summer ease up a bit on yourself and on those dependent on you more or less, remember that the best man is not he who rushes, on the approach of his employer; on the contrary such a fellow is usually worth the watching morning and night until pay day.

FOREIGN NOTES.

Among the numerous villas of Italy celebrated for their architectural beauty and the glory of their gardens, the Villa Borghese is by no means the least noteworthy. It was begun in 1618 and the gardens have been at different times enlarged in extent by various eminent landscape gardeners. Many American travelers have no doubt wandered through the place and know more of its history and attractiveness than can be put within the scope of a short newspaper article like this.

The chief object of these notes is simply to draw attention to a danger which threatens the very existence of the place for it appears that having been purchased by the municipality of Rome the Villa Borghese now forms a public park, and that there is some intention on the part of the Italian government to build the newly constituted International Institute of Agriculture on the spot, thereby seriously if not altogether affecting the ancient Villa Borghese and spoiling its adjacent gardens. Some correspondence has taken place in the local newspaper, and it is to be hoped that the protests may have the effect of sparing this historic building from twentieth century destruction, and that another site may be found for the contemplated building and museum that will form the headquarters of the new International Institute of Agriculture.

A grand volume on the art of garden design in Italy has just been published by Mr. Inigo Triggs. It is an immense folio in size and is got up in really handsome style, the printing and illustrations being executed in the very highest art. We must, however, defer our notice of it until the next contribution of "Library Notes."

C. HARMAN PAYNE.

OBITUARY.

Lyons' horticulture has suffered a severe loss by the death of M. Gabriel Chabanne. Chabanne was a thorough Frenchman and a gardener of European repute. He was attached to the Botanic Gardens in the Teted'or Park at Lyons, France; he jointly assisted Dr. Gerard in the editing of "*L'horticulture nouvelle*"; he was also an active member of the French National Chrysanthemum Society and joint author of a little work on the chrysanthemum with M. Choulet of the same city. He was secretary of the Lyons' Horticultural Society which he had done much to render prosperous, and his body was followed to the grave by a large number of his sorrowing townfolk with whom Chabanne was a great favorite. He was only 44 years of age and one of those energetic, useful men the world can ill afford to lose.

"Horticulture Is the Best Medium."

Editor HORTICULTURE:

We must discontinue our large advertisement this week in order to catch up with the orders we have received since its first insertion. We find that HORTICULTURE is the best medium for advertising that we have ever had.

Mass. H. H. BARROWS & SON.

Enclosed find a crisp dollar bill to pay for HORTICULTURE. I enjoy it very much and wish you success in every way
M. L.

HARDY PLANT NOTES.

Catalpas are, just at this period of the year, subject to the attack of a long black worm that attacks the leaves and quickly chews them up. The best remedy is to spray with the following solution: Three pounds of blue stone; three pounds of lime; four ounces of paris green mixed with fifty gallons of water. It will kill them in fifteen or twenty minutes.

Shrubby groups are made pretty at this period by the bright red flower of *Spiraea bumalda* Anthony Waterer. This variety is far superior to the species *bumalda*, and the latter will likely be propagated only on a small scale when Anthony Waterer is better known.

The best golden arbor vitae is Geo. Peabody, yet *Vervaeana* is more graceful in outline and has a yellow variation through the foliage that is very pretty. Some claim the latter will stand a more severe location. At this period the Geo. Peabody looks exceptionally pretty.

An evergreen that will be more largely planted when better known is Douglas' weeping spruce. It has a slight tinge of blue that is very pretty.

The evening primroses are just coming into flower and Youngii can be termed the best of all. There is an unusually large and showy one—*Missouriensis*—that has flowers three and four inches across.

Though hardy white and pink varieties of perennial hibiscus are abundant it has seemed impossible to get a hardy red or scarlet one. An excellent scarlet strain has now been raised that has flowers as large as any of the other types. It was secured by crossing *coccinea* with a hardy type and represents a number of years of hard work. It will be exhibited at the Jamestown Exposition in 1907, for the first time.

The pretty little light-foliaged *Veronica candida* is now in bloom. It is an excellent blue-flowering plant for border planting or edging.

In addition to the new hybrid *Wichuraiana* Roses mentioned in a recent issue, special note should be made of the varieties Alberic Barbier and Rene Andre. Alberic Barbier is a double of a creamy white color and comes out in a lovely bud form. The foliage is evergreen and exceptionally fine. Rene Andre is quite similar in form and foliage and has a very pretty flesh pink flower, double.

WARREN J. CHANDLER.

A PEONY LIST.

T. D. Hatfield's list of the best peonies, carefully selected from those on exhibition at the recent peony show, was as follows:

White or tinted white—Festiva Maxima, Jules Lebon, M. Dupont, Couronne d'Or, M. Emile Lemoine, Soliaterre, Mdme. Carlot, Mt. Blanc, Avalanche, Mrs. Winn Lewis.

Pink—Mdme. Geissler, Marguerite Gerard, Susanne Desert, Achille, Miss Brice, Venus, Therese, Zoe Calot, Asa Gray, Germaine Bigot, Charles Verdier, Halbid, Baroness Schroeder.

Dark colors—Felix Crousse, Adolphe Rosseau, Plutarch, Fortegat.

NEWS OF THE CLUBS AND SOCIETIES.

CHICAGO FLORISTS' CLUB.

The Chicago Florists' Club held their fifth annual outing at Higginbotham Woods on June 24. A derailed freight train caused an hour's delay in transit, but when the 225 picknickers reached the station James Hartshorne, of the Chicago Carnation Company, was waiting for them with plenty of hay racks to convey them to the grounds. Dinner was first in order, then the entertainment began as per schedule. In the ball game, E. E. Winterson, umpire, the Wholesalers beat the Retailers 19 to 15 in five innings. In the 50-yd. dash for married ladies no decision could be reached, and prizes were awarded to Mrs. L. H. Winterson, Mrs. McKee, Mrs. Chas. Balluff and Mrs. Weiman. The sack race was won by Julius Haskins, 1st; Jas. McKeand, 2d; 100-yd. dash, open to trade only, J. Haskins, 1st; A. E. Elling, 2d; 50-yds. for fat men, John Poehlmann, 1st; Geo. Heirle, 2d; running broad jump, trade only, Henry Koropp, 1st, 18 ft. 2 in., Mr. Hirsch, 2d, 16 ft. 11 1-2 in. An extra event was the Babies' race, in which the prize was carried off by little Beatrice Asmus.

Philip Foley, of the Foley Manufacturing Co., presented the prizes to the winners. Everybody returned feeling grateful to H. N. Higginbotham for the use of his grounds at Cherry Hill, and to the entertainment committee.

COLUMBUS FLORISTS' CLUB.

The regular meeting was held Tuesday evening in the club rooms at Iroquois Hall. Vice-president Curry was in the chair, and Secretary McKellar promptly on hand. The attendance was good, and every member present very enthusiastically interested in the work of the evening. After the regular business had been duly disposed of the important question of the evening was brought forward for settlement—"Shall we or not have a chrysanthemum show this fall?" After a long and most earnest discussion of the subject, from every point of view, in which Messrs. Reichert, Curry, Woodrow, Hills, Bauman, McKellar, Faxon, Wedemeyer and others took part, it was voted "that this club hold a public Chrysanthemum show in November next, all arrangements to be left to a managing committee that will be duly chosen." After this matter had been settled, some plans were proposed regarding prizes for the children's gardens but as the hour was late this was not acted upon. The next meeting will be Monday evening, July 2, when there will be a smoke talk and refreshments.

NEWPORT HORTICULTURAL SOCIETY.

President MacLellan has nominated for judges, at the Society's exhibition in August, Messrs. Bruce Butterson, Alexander Fraser and Stewart Ritchie. At a meeting of the executive committee these nominations were approved.

MASSACHUSETTS HORTICULTURAL SOCIETY.

Annual Rose and Strawberry Show.

This interesting event took place on June 22 and 23. There was a fair showing of roses in the H. P. classes but nothing really new or novel was in evidence and in the varieties shown the advancement, of any, over ten or even twenty years ago was very small. M. H. Walsh, for Miss Sarah B. Fay took most of the first prizes, including that for 24 varieties three of a kind, twelve varieties three of each, six varieties three of each, eighteen varieties one of each, six Brunners, six Druschki, six Sharman Crawford, six Margaret Dickson and general display of one hundred bottles. There were nine entries in the latter class. Mr. Walsh also took first for collection of H. T. roses, W. J. Clemson took first for twelve varieties of H. P.; Geo. F. Fabyan first for six varieties, Mrs. A. W. Blake first for six Rothschilds, Mrs. C. C. Converse and Mrs. Lester Leland first for six Laing, Dr. C. J. Weld first for six Jacqueminot. Other competitors winning honors in these classes were Wm. Whitman, estate of John C. Chaffin, Mrs. E. M. Gill, and Mrs. J. L. Gardner. Fine displays not for competition were made by Langwater Gardens, Mrs. E. A. Wilkie. Walter Hunnewell, gardener T. D. Hatfield, received a bronze medal for a display of the new French summer blooming chrysanthemums. These were the center of much interest. There was the usual fine display of sweet-williams, prizes being awarded to Wm. Whitman, Dr. Weld and Wilfred Wheeler. Peonies were shown in less number but better form than at the peony show a week earlier, there being many contributors and George Hollis received a certificate of merit for his seedling Lucy E. Hollis, one of the thirty-three he had on exhibition. A certificate of merit was also awarded to Oakes Ames for *Cypripedium l'Ansonia* (*C. Rothschildianum* x *C. Morganae*) and honorable mention was given Walter Hunnewell for display of rose Rublin. Mrs. J. L. Gardner and Mrs. A. W. Blake showed groups of splendid Canterbury Bells in pots. W. N. Craig showed several varieties of *Gladiolus nanus* which he pronounced synonymous with *G. cardinalis*. Blue Hill Nurseries and Mt. Desert Nursery were represented by fine collections of herbaceous flowers. Strawberries and early vegetables were, as usual, excellent.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Back Reports Wanted.

The secretary would like to procure for the use of the society, copies of the annual reports of the following years: 1885, Cincinnati; 1886, Philadelphia; 1887, Chicago; 1888, New York; 1892, Washington; 1896, Cleveland; 1900, New York. Members having spare copies of any of these will confer a great favor by sending them to

WM. J. STEWART, Secretary.
11 Hamilton Place, Boston.

CLUB AND SOCIETY NOTES.

The Kentucky Society of Florists will hold their regular monthly meeting on July 3d at Fred Haupt's.

The R. I. Horticultural Society held a rose and strawberry show in Providence on June 21. A new seedling strawberry from the State experiment station, shown by Prof. F. W. Card, attracted much attention.

The New Haven County Horticultural Society, (Conn.), at its meeting on June 19 had a fine exhibit of roses by R. Bell, gardener to Miss Dana; John C. Morton; David Kydd, gardener to Mrs. Frances Wayland; J. H. Murray, gardener at Yale Botanic Gardens; John Slocombe and W. Beattie. Ernest Carroi read a paper on Heather.

The Huntington Horticultural and Agricultural Society (N. Y.), held its annual rose and strawberry show on June 21, with its usual fine display. George Ashworth, gardener for Walter Jennings, took first prize for a vase of cut flowers. The prizes for roses were secured largely by William O'Hara and James Kirby, and for strawberries by August Heckscher and Roland Conklin, of Rosemary Farm.

The second rose show of the New London County Horticultural Society at Norwich, Conn., on June 19 and 20 was a great success. The judges were David Bordon and John Fowler of Eastern Point, John Barron, gardener for Mrs. F. A. Roth. The display of palms and ferns by F. L. Osgood and the exhibits by Mrs. F. A. Roth and the Geduldig estate attracted much attention, as did also the collection of nymphaea and water lilies by H. A. Dreer of Philadelphia.

The next show and conference of the French National Chrysanthemum Society will be held at Caen, November 7, 8 and 9. A list of questions to be discussed has already been drawn up, to which we may refer later in the season. Among the very useful publications that have been brought out under the auspices of this society are Dr. Chifflet's book on "The Maladies and Parasites of the Chrysanthemum," and his large colored plate of the insects and diseases, with the remedies for each appended.

The great spring show of the National Horticultural Society of France was opened May 19, and in spite of rather indifferent weather was a great success, for the patronage of the public was very lavishly bestowed upon it. The new President of the French Republic attended in person and after inspecting the show distributed, as is customary upon such occasions, various decorations to those gentlemen whose labors were considered most worthy of special recognition. The late President of the French Republic, M. Loubet, has been nominated Honorary President of the National Horticultural Society of France on account of the deep interest he took in the welfare of the society during his term of office as Chief of the State.

NEWS NOTES.

Herbert S. Heath has started in the landscape gardening and nursery business at Newington, Conn.

C. Quadland & Son of North Adams, Mass., have taken the Bank street store opened last year by Winslow Cady.

E. D. Vickery of East Mansfield, Mass., was a heavy loser in the hail storm that swept over that locality recently.

S. B. Weeks of Waterford, Conn., has bought the greenhouses of the Mitchell estate and will remove them to his place at Lyon Station.

Fire started in the greenhouse of W. H. Humfelt, 1701 Highland avenue, Kansas City, Mo., last Saturday, but was discovered and extinguished with slight loss.

The Riverside Greenhouses at Gardner, Mass., are to be sold at auction on June 30. A. F. Johnson, the present owner, has decided to leave town. The advertisement in HORTICULTURE gives details.

Dudley & Son of Parkersburg, W. Va., are having plans drawn for a new store that shall be one of the finest in that section. It will be equipped with all the modern improvements and the interior decorations will be artistic and beautiful.

Ant. C. Zvolanek of Bound Brook, N. J., was a sufferer in the recent hail storm that visited that section, but the superior construction of his houses and their sheltered position among the mountains, prevented a serious loss. Glass in Plainfield was badly damaged.

SEED TRADE.

J. M. Thorburn & Co. are busy fitting up and moving into their new store on Barclay street, New York. The enterprising head of this reliable old house promises to show the boys what an up-to-date retail seed store should be, and the present plans which are rapidly taking form will make this the handsomest seed store in America and the largest for retail purposes. It extends from Barclay street through to Park Place. The main retail department will be on Barclay street and the receiving and shipping will be done from the Park Place side.

Truck farming on Long Island, N. Y., is on the decline. For three years a wild real estate boom has had the western end of the island in its grip, thousands of acres of the finest trucking lands in this country have been sold to speculators and closed to production; prices have advanced far beyond values and a reaction is bound to come. In a few instances values are not fictitious and will probably still further advance, but in the main they are out of all reason, and when one realizes the thousands of acres of fine lands rendered useless by this speculative craze, it almost makes him sigh for Henry George and the single tax. The decline in truck farming is already severely felt by New York and Long Island seed dealers. New York may yet experience a famine in "garden sass."

Pansy Seed CROP OF 1904

Carnations
A Specialty.....****WHOLESALE
GROWER of CUT FLOWERS**

Cut Flower Market Reports

BOSTON Business remains in about the same condition as last week. Orders are few and stock is not up to the average. Roses are not even in a fair condition, while carnations are improving somewhat. The demand is light and but little change is expected in the next few weeks.

There was a lull in the **BUFFALO** market Saturday and Sunday, June 16th and 17th, and a good portion of the receipts were carried over. On Monday signs of life appeared and for the balance of the week there was a scramble for stock. Beauties and tea roses, together with all other flowers, began to move at a rate which made the wholesale clerks wear smiles. Plenty of stock was had to satisfy all up to Wednesday; for the balance of week the demand was greater than supply, many growers having thrown out part of their rose stock and carnations. Beauties of good quality moved freely, medium and shorter grades having the preference. Select Liberties, Kaiserins and Carnots were in fine form and sold out clean. Good demand was also had on colored carnations, sweet peas, peonies, and lily of the valley. White carnations were in abundant supply with but a light demand, but moved fairly well considering the amount handled. A good many orders were turned down at the end of the week on account of short supply. Asparagus Sprengeri and Croweanum were in good supply with demand fair.

Last week proved a **CHICAGO** busy one for all florists who were in a position to secure orders for graduations. The market was short of roses for a while, but shipments of Beauties came in and sold at a good figure. Beauties have improved in color, size and quantity relieving the strain of those having advance orders. Brides and Bride-maids are holding out well for this time of the year, while carnations are completely on the down grade. Sweet peas are harder to get and lily of the valley has advanced slightly. Gladiolus is looking well. Peonies are about finished. Green goods are in good supply.

The past week has been a busy one. The **COLUMBUS** floral designs and flowers which were sent on Thursday for the funeral at Milford, O., of Hon. John M. Pattison, the late Governor of the State, were from representative men in every walk of life, and practically filled a car on the special funeral train that went from here. The Livingston Seed Company supplied two magnificent baskets of American Beauty roses, one for the House of Representatives and one for the Senate; the Franklin Park Floral Company supplied for the State officials a huge copy of the State seal, made of carnations, wheat and green; Graff Bros. and the Fifth Avenue Floral Company also sent many orders. Among the special pieces was a beautiful mantle of lily of the valley and smilax, which covered the casket. All

CROWL FERN CO., MILLINGTON, MASS.

the good stock obtainable was used for this occasion. Apart from this work a most excellent general trade has been sustained.

INDIANAPOLIS Business continues good both in cut flowers and plants: The trade in bedding plants this season has been far ahead of that of any previous year and prices have been firmer. The supply generally has been equal to the demand, but now most of the growers are cleared out. The cut flower trade has kept up well so far. The usual number of weddings have used up large quantities of blooms and most of the florists have had a share. Sweet peas and summer field grown flowers are extremely plentiful and same may be said of roses and carnations. The chief difficulty is the quality of the stock

LOUISVILLE Business the past week has not been rushing but stock has kept moving. Carnations and roses of good quality find a fair demand; lilies and sweet peas continue good, there is an abundant supply and they sell well. The conditions of supply and demand on other stock remain unchanged since our last report.

PHILADELPHIA The market was more balanced last week, few gluts occurred in the staples. On the whole business was good for the season. Beauties were in good demand notwithstanding their rather distinguished air. Brides, Bridesmaids, and Kaiserins went well also; but the quality was the regular summer article. Buyers were pleased with what would have caused a terrible kick six months ago. The majority of the carnation receipts are poor as to quality although there is still some choice stock coming in. Lawson is in the lead as to quality and some really fine flowers of this variety have been seen of late.

Queen, Ethel Ward, Prosperity and Boston Market are among the other favorites. Lily of the valley is scarce. Good lily of the valley is always in demand. Cattleyas are plentiful at present, and the call for them is excellent. Out-door subjects such as irises go rather slow and do not cut much of a figure as commercial subjects. Cold storage peonies are about over for this locality.

SAN FRANCISCO It cannot be truthfully reported that the all-around sameness of valuation for flowers that was in vogue for the few florists during Memorial Day season, came to stay. It is now again observed these quiet business days that the "what will you give" price that prevailed from the time of the disaster till Memorial Day, is the present trade condition. But an improved business status of affairs is anticipated ere long, not only by the few re-established florists, but by two other cut-flower dealers of ante-calamity days. These two, re-established the past week, are A. Matraria of the old Art Floral Company, and J. J. O'Connor. The former has located at Eddy street and Van Ness avenue, and the latter at 531 Hayes street.

A meeting of the stockholders of the Robert Craig Company, Philadelphia, Pa., was held June 25, 1906. The report showed the business to be in a prosperous condition. A semi-annual dividend of three per cent. was declared payable June 30, 1906. The following officers were elected: Pres., Robert Craig; vice-pres., George Craig; sec.-treas., Robert A. Craig; directors, H. E. Michell, Chas. Keller, Daniel C. Donaghue, George Craig, Robert Craig.

Roger Comstock and H. L. Hungerford of Milford, Conn., will consolidate their interests after June 30.

PHILADELPHIA NOTES.

A seedling chrysanthemum in full bloom was a feature of the monthly meeting of the Horticultural Society held on the 19th inst. There was also a fine display of sweet peas.

George Samtman has retired from the firm of Myers & Samtman, rose growers, Chestnut Hill, and will build a new establishment for himself in this vicinity. Mr. Samtman is a practical grower and has been very successful in the past with Beauty, Liberty, and other difficult subjects. He starts his new venture with the brightest prospects.

The H. F. Michell Co. are moving their flower seed department from the third to the second floor, where better light and more room are available for the increasing demands of the business. Mr. Ely, who has charge, says the increase this year has been very gratifying.

Charles Sim, the popular landscape gardener and contractor of Rosemont, has been laid up for the past six weeks from a bad fall while engaged in superintending the new work on the W. P. Hinzey estate. He is now able to be about again and actively attending to the detail work of his extensive business.

The Lord & Burnham Co have secured the contract for new heating plant and additional glass for the Wilmington and Brandywine cemetery; also a new addition to the greenhouses of Edward T. Lewis, Wilmington; both contracts through the Philadelphia office which is in charge of D. T. Connor.

William Griffin has retired from the firm of Griffin Bros., Frankford, on account of ill-health, and sailed on the S. S. Lucania on the 18th inst. The business will be continued by James Griffin, the founder of the firm.

W. E. McKissick says that one of their most satisfactory scarlet carnations at the present time, and in fact in the fall and all through the season, is Elbon, a variety raised by Roney Bros., of West Grove. It is only medium to small in size but grand in every other way, and fills a niche all its own.

Samuel S. Pennock was absent from the city from the 22nd to the 26th at the wedding of his sister-in-law, Miss Helen B. Foster of Westerly, R. I., to Mr. H. N. Willets of Philadelphia.

Victor Goshens, superintendent of the Graham conservatories at Logan, sails for Europe July 1st on the Red Star Line Philadelphia to Antwerp. Business and pleasure combined.

A special meeting of the Florists' club was held on Wednesday, the 27th, to arrange for a reception to Hugh Dickson of Belfast. This interesting event is scheduled for July 6th.

Ernest Hemming will give a talk on "Japanese Irises" at the regular monthly meeting of the Florists' club July 3rd.

PARK WOODLANDS AND PLANTATIONS.

Read before the American Association of Park Superintendents by J. A. Pettigrew.

The subject of the treatment of natural woodlands in parks is of vast importance, and commands the earnest thought of landscape gardeners. Such areas are generally made up in great part of thick growths of trees, which have injured each other, more or less, by close contact—natural, perhaps, in the sense of having sprung from the soil without the aid of man, but having, nevertheless, been subject to such unnatural conditions as to upset Nature's balance.

The effort on the part of the landscape gardener or forester to improve the natural or growing condition of woodlands in public parks is generally met with opposition from probably well-meaning, but badly-informed, critics, who cry that the work is an interference with Nature, and who call in the aid of ready tongues, and readier pens, to stop the "outrage."

The forester brings into service the practical experience and study of years in his effort to assist Nature in her work, yet all for naught; the clamor of a few, enlisted in a mistaken crusade, discourages him, or influences those in authority to the extent of causing a stoppage of the work, and the result is seen too painfully, all over the country, in the malformed and distorted condition, from overcrowding, of trees in parks.

General rules can scarcely be framed for the treatment of natural woodland; much depends on the use to be made of it, whether for woodland effects or woodland use. The first operation in a thick piece of woodland desired to be retained for natural effects should be that of thinning; trees of individual merit or beauty should have interfering trees removed, to allow them to develop freely. In places, areas of greater or less size may be found entirely filled with trees, which, by reason of overcrowding, are so far injured that they can never recover their lost beauty. In such cases a free cutting should be made to allow light to penetrate, so as to permit of the growth of saplings or newly-planted material below, and further cuttings made from year to year.

(To be Continued.)

The Matter of Planning

All the economy possible in erection costs will not make up for wrong planning—the disadvantageous arrangement of your houses; we know the best there is in planning a greenhouse—your house would have the very latest economy of arrangement and most improved equipment.

HITCHINGS AND CO.

GREENHOUSE DESIGNERS AND BUILDERS.
Manufacturers of Heating and Ventilating Apparatus.
1170 Broadway, NEW YORK.

A BIT OF INFORMATION

It's good to have in a convenient form bits of information that will help you in making up your mind—and your order—for a greenhouse.

Cypress is furnished in even foot lengths only. For instance a 20 ft. wide house, having roof built with the usual pitch, requires a roof bar 12 feet long. Figure it this way; for every additional 2 ft. of roof bar the width of house is increased 3 ft. 4 in. Thus a 14 ft. bar would make a house 23 ft. 4 in. wide. This rule applies to all bars up to 20 ft. long.

Now when you come to buy your materials, it's a satisfaction—and a saving—to know that you have an estimate that covers everything, guaranteeing you against series of vexatious delays—those extra expenses that creep up and pull your first year's profits down.
